Melt the butter, add flour and seasoning, and blend well. Add the milk gradually, stirring constantly, and cook until the mixture becomes thick. Cover with buttered crumbs and grated cheese and bake until brown.

Fish Cutlets.—Cut fish into slices, remove bones; dry, sprinkle with flour; fry in deep boiling fat until golden color. Serve very hot.

Our Fashion Department.

All Patterns 10 Cents Each

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to WISCONSIN FARMER Madison, Wis.

2033—A simple play dress, with lower edge arranged for romper style. Pattern is cut in 4 sizes: 1, 2, 3 and 4 years. Size 4 will require 2⅜ yards of 36-inch material.

1751—A charming spring frock. Pattern is cut in 4 sizes: 14, 16, 18 and 20 years. It requires 4 yards of 44-inch material for the dress with ruffles, and 3 yards without ruffles, for a 14-year size.

2006—Ladies' house dress, with reversible closing, with or without chemisette, and sleeve in wrist or elbow length. Pattern is cut in 7 seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 7⅛ yards of 36-inch material for a 36-inch size.

1773—A smart party or best dress, with sleeve in wrist or elbow length. Pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires, with double skirt, 4⅛ yards of 44-inch material for an 8-year size; with single skirt, it requires 3⅜ yards.

2022—A practical ladies' apron. The pattern is cut in 4 sizes: Small, for 32 and 34 inches bust measure, medium for 36 and 38 inches bust measure, large for 40 and 42 inches bust measure, and extra large for 44 and 46 inches bust measure. It requires for a medium size 4⅜ yards of 36-inch material.

1697—Ladies' dress with sleeve in either of two lengths. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 6⅛ yards of 44-inch material for a 36-inch size.

1862—A comfortable style. Pattern is cut in 3 sizes: 12, 14 and 16 years. It requires 3⅛ yards of 36-inch material for the waist, and 2⅞ yards for the skirt, for a 16-year size.

Waist 1770-Skirt 1769—A picturesque model. Waist pattern 1770 is cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. Skirt pattern 1769 is cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 7¾

yards of 36-inch material for a medium size, without folds. Two separate patterns, 10 cents for each pattern.

1820—A most attractive house or home dress, with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 36, 40, 42 and 44 inches bust measure. It requires 7¼ yards of 36-inch material for a 36-inch size.

2028—A smart shirt waist with sleeve in either of two lengths. Pattern is cut in 7 sizes; 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2¾ yards of 44-inch material for a 36-inch size.

2019—Girls' one-piece yoke dress, with sleeve in either of two lengths. Pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 4⅜ yards of 36-inch material for a 6-year size.

2027—Ladies' skirt with yoke facing (in raised waistline). Pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 will require 4¼ yards of 44-inch material.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

The Lonesome Princess.

Dear Young Folks:—I enjoy reading your letters very much. I am sending a story for our page.

Once upon a time there lived a little princess. She lived in a castle at the top of a very high mountain. The little princess had everything she wished for, but she was very lonesome because there was nobody to play with. The old nurse who took care of her was very good and kind, but, of course, she didn't know how to play.

One morning the little princess was looking out of the window when far below on the road that wound up to the castle gate she saw two children, a boy and a girl. They were the first children she had ever seen, for everyone else in the big castle was grown up. She leaned far out of the window and waved her hand. The children didn't see her so she got a big lace shawl and waved that. Then they saw her.

"Come on up," called the princess. "Come and play with me."

For fear they could not hear, she beckoned first with one hand, then with both hands until she was sure they understood. They acted as if they wanted to come, but the little girl seemed afraid. The little boy told the little girl not to be afraid and they started up the road to the castle hand in hand.

When the princess saw them coming she hurried down to show them the way, and she brought them upstairs to her big playroom where there were lots and lots of the most beautiful toys—so many that the princess herself didn't know how many. There were more than a hundred dolls and trunks full of dolls' clothes, and a whole village of doll houses and regiments of tin soldiers and a stableful of rocking horses, and so many other things I can't remember them all. —Erma.

Happy.

Dear Young Folks:—I have written to you before, but I guess there was not room for my letter. I am ten years old and I go to Shellbark school.

I thought perhaps some of you would like to know about my canary bird. His name is Happy and I think he was well named. His cage hangs just opposite the telephone and when we are talking over it he sings so that we must put something over the cage or shake our hand at him.

We feed him a bit of hard-boiled egg sometimes. He has seed also and plenty of water has to be kept in the cage. Sometimes we give him fruit, such as apple. In the summer we let him out of the cage for a while to flutter around. He cannot fly very well. He is a very good singer and I think we would miss him very much if he were gone. —Opal.

A Pet Bantam.

Dear Young Folks:—I have seen several letters about pet bantams so I will tell about my bantam hen. She was very tame. She laid and wanted to sit in an old heating stove.

A neighbor gave me two goose eggs, but one had some lard on it when she gave it to me, so I knew it wouldn't hatch. I set it anyway, for the bantam couldn't sit on one very well. In four weeks she hatched out a fine, big gosling, of which she was very proud. She took good care of it and it grew very fast. It wasn't long until the gosling was larger than the bantam. She ran with it until it was a grown goose and we ate it for Thanksgiving dinner. —Sister.

A New Riddle.

Dear Young Folks:—I surely do love to read the letters from the boys and girls and wish there were a lot more.

I am going to school. I am in the sixth grade and will pass to the seventh this year. I have two miles to go to school. We have a good time playing basketball. Our teacher's name is Mr. Patterson. He sure is a good teacher and so is his wife. There are about sixty enrolled in our school.

I have brown hair and black eyes. I am thirteen years of age and I weigh 130 pounds.

I am sending you a riddle. When was milk the highest? Can you guess it? —Annie.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for March 18, 1917.

Jesus Saves From Sin.

LESSON TEXT—John 8:12, 31-37, 56-58 (Read entire chapter).

GOLDEN TEXT—If the Son, therefore, shall make you free, ye shall be free indeed.—John 8:36.

Teachers should sketch rapidly in a chronological way the events in the life of our Lord. (See any good harmony) and show that this lesson belongs to the period of the Galilean ministry of Jesus when he had gone up to Jerusalem to attend the feast of the tabernacle (John 7:1-52). Let us be sure to load our guns with temperance ammunition, be familiar with facts, take careful aim, concentrate all we have to say upon one definite aim, and then pull the trigger e. g. be sure to shoot a temperance charge and make a temperance application.

I. The Slavery to Sin. Jesus' previous references to water (Chs. 4 and 7) and to bread (ch. 6) were occasioned by outward occurrences; so with this reference to light. In the treasury (v. 20) near to Jesus as he spake were two colossal, golden lamp stands around which when lighted the people gathered with rejoicing. Amid the blaze of this illumination, Jesus exclaims: "I am the light of the world." What is more beneficent than light as it reveals, cheers and brings life, health and happiness to mankind? Without light there is no vision. Without Jesus there is no spiritual wisdom. Without light we know not whither we are going. Without Jesus we grope in the darkness. Every ray of light, of truth, of holiness and love comes from him, for God is light, and in him is no darkness at all (I John 1:15). Some think that these words were occasioned by the onlookers, seeing what Jesus had written in the sand (vv. 1-11). The first step in the slavery of sin is blindness; the second is habit; and the third is that of absolute slavery (Prov. 5:22). Jesus was the incarnation of the light of God. We cannot conceive of Jesus making such an assertion as this, and being merely a good man.

II. The Possibility of Freedom (vv. 31-36). These words were spoken to 'those which had believed on him," and as the result they were to know the truth, and the truth should make them free. Knowledge and liberty come from a continuance (abiding) in the word of God (John 14:15; 16:12-13). Many men reject Jesus Christ because they claim they wish to have their liberty, and by so doing they lose their liberty. A disciple is a learner; Jesus is the teacher; the entrance examination to the school of Christ are the simple and necessary condition of believing or accepting him as Lord and teacher. The scholars are all the disciples who continue under his instruction. The object of the schooling is to make perfect men. "unto the measure of the stature of the fulness of Christ" (Eph. 4:22; Col. 4:12). Christ's school is not only in the church and in the Sunday school and young people's society, but it is everywhere, in the home, in the office, at work and play; wherever one is trying truly to live according to Christ's will, he is in his school, and that school is open both day and night; there are no vacations and no recesses. The textbook is the Book of books. We need not argue as to the necessity of sin, but realize the fact that all are under sin (Rom, 5.12), but being under sin does not necessitate our abiding there, nor is sin necessary to our being. This freedom here is from sin and the love of sin and the curse and penalty of sin and the bondage and corroding care of sin. It is also mental freedom, freedom for Christian activity. A knowledge of the English Bible is a liberal education, and brings true liberty to those who are thus educated. As contrasted to that we have the slavery of sin (vv. 34, 36). The drunkard is a slave because he is restrained from doing what he knows he ought to do. He cannot even do wrong freely for his conscience constantly upbraids him. He is a slave because he is compelled to bear the consequences of sin against his will. The way of escape (v. 36) is through the son: "If the son, therefore, shall make you free, ye shall be free indeed."

III. The Authority (vv. 56, 58). The Jews took exception to the words of Jesus (33-55). When did Abraham see Jesus? Read the 18th and 19th chapters of Genesis, and we find that one of the three who visited Abraham was different from the other two, and remained behind while two went on to Sodom. The one who remained was the Lord Jesus, Jehovah appearing in human form before his later incarnation as Jesus of Nazareth.

"I Am" is the name of Jehovah. Jesus here takes that name to himself. There was a time when Abraham came to be or was (v. 58), but there was no time when our Lord ever came to be for he is the eternal "I Am." Being thus one with God, he has the power to set men free.

We have in this chapter the picture which Jesus draws of the character of the devil as the enemy of mankind under two aspects: First, he is a murderer (v. 44).

No war has slain what intemperance (one of his favorite instruments) has slaim. Second, he is a liar

An Hour is only 30 Minutes with the

HOOSIER KITCHEN CABINET

The first step towards quick meals, easy meals, good meals and on-time meals is to put the Hoosier Cabinet at work in your kitchen. A million women are doing your hour's work in 30 minutes with this lifetime kitchen helper.

It lets you sit down to prepare the meals and saves you miles of steps.

Hoosiers are sold on convenient terms, under the broadest guarantee ever given on a kitchen cabinet—*your money all back if you are not delighted.*

Why Wish and Wait?—You Need It NOW!

If men did the cooking there would be a Hoosier in your kitchen already. What man on the farm would be content without a handy place for his tools and implements?

You have a right to save your health and strength; you have a right to the Hoosier.

Get Our Freight-Paid, Free Trial Offer

All the convenience a Domestic Science Expert could invent has been embodied in the "Hoosier Beauty" by the master cabinet workers who built it.

It brings you three big cupboards, a large pantry, roomy table with porcelain or aluminum top, numerous handy bins and compartments. It brings you places for 400 articles and 40 great labor-saving inventions. It puts all your tools and supplies *at your fingers' ends.*

"Hoosier Beauty" is all that the name implies—the finest and handiest kitchen cabinet ever made.

Send for Catalog—FREE

See the beautiful new Hoosier models illustrated by actual photographs. See our rock-bottom prices, easy terms, free trial offer and money-back guarantee. It costs you nothing to investigate. Our book tells all. Write or mail coupon today.

I MET HIM ON THIS VERY SHIP!

It was within an hour of sailing time. I was on my way home from Europe five years ago. The Mauretania lay beside her Liverpool wharf. Everybody was hurrying to get on, as we were to sail at five o'clock. Suddenly, without warning—without a propeller turning—she commenced to pull away from her moorings. The gang planks creaked—broke loose—and there was quite a commotion as the mighty Mauretania tore loose from her moorings and floated out into the water. In the excitement I met a man who was leaning over the rail who looked at me and we laughed together. Then we just naturally got acquainted like people do when they are traveling. He was J. J. Berrigan of Orange, New Jersey, the famous cream separator expert and inventor. I had never seen him before but I had heard of him. I told him I was from Waterloo, Iowa, and he said, "You are Galloway." I soon found out he was the great cream separator expert and a man I was glad to meet. Naturally

WE BECAME WELL ACQUAINTED

He told me what he had done in perfecting cream separator patents and improvements. I told him he was just the man I was glad to get acquainted with. After the Mauretania had been lashed to her wharf again, the excitement was over, and we pulled out of Liverpool several hours late—Berrigan and I began to talk cream separator, and every day after that we spent several hours together visiting. I told Mr. Berrigan that we were perfecting what I thought was the best cream separator ever produced, and I also told him if he would come to Waterloo and put on the finishing touches, go over the separator, test it, criticize it, find fault with it wherever he could, and suggest any possible improvements, I would pay him well for his time. In a few days after we landed in New York he did come to Waterloo. He said our separator was one of the finest designs he had ever seen, and with the few recommendations which he made, he pronounced it O. K.—good as the best—and better than many of the separators on the market today. Our engineers, designers and separator builders had produced a machine with graceful lines, simplicity of construction, combined all the good features and left out all the faults. Mr. Berrigan commended us on the work and immediately put his stamp of approval upon this machine. That's why I say

WE PERFECTED THIS SEPARATOR

before we offered it on the market. We put out in the hands of farmers and dairymen enough of these separators to know that they would stand up under any test, whether operated and used in the kitchen, the milk house, the creamery or elsewhere, used two or more times per day, every day, week after week, month after month. **I just want you to try it.** If you like it, buy it. If you don't, send it back. **We pay freight both ways.** If the New Galloway Sanitary Separator is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is, I could not afford to make this **ninety day trial** offer and I could not afford to guarantee it for **ten years.**

"Read this little story. It was my turning point as a manufacturer of cream separators."—Wm. Galloway.

Get My New Low Prices

AND READ MY 1917 BOOK ABOUT CREAM SEPARATORS

It tells of how we took four years to design and perfect this separator, to build into it every good cream separator feature and retain its beautiful proportions. How we did not build it down to a price, but built it up to a high standard in our own factories right here in Waterloo. It tells how we build Galloway Sanitary Separators from the ground up. How they are designed and many other separator secrets and facts. A meaty, exact, concise, truthful book about cream separators, gasoline engines, manure spreaders, tractors and other implements we manufacture. Why, by selling direct, I can make a machine as good or better than any high priced separator sold through other systems. These are a few of the reasons why. I want you to get this book. It tells the whole story. It tells the truth. It tells the facts. Ask for it today. A postal gets it. Don't delay. A reading will save you dollars in buying.

Note these few strong, simple, sanitary parts. Easy to wash clean—no rough edges—no sharp corners. Bowl catches any foreign matter in the milk. Only two shafts in the whole gearing—both of high-carbon steel, in long, perfectly fitted bearings. All gear shaft and both bowl spindle bearings supported by one casting—the gear case. All the working parts run spray of oil. Simple, effective driving clutch on crank shaft.

4 Good Sizes From 375 to 950 lbs. Capacity per Hr.

Indisputable Proof!

Have operated several different kinds of separators. Galloway Sanitary skims as close and runs lighter than any. J. E. Ricketts, Paddensburg, Mo.

We know it skims close. It paid for itself. Wm. S. Brower, Farnum, Idaho. It is easier running and more easily cleaned than others. We made a saving of $23. I wouldn't exchange it for any high priced separator. E. F. Louthan, Carthage, Mo.

Your No. 9 separates perfectly at rate of 800 lbs. per hour. (Only guaranteed for 750 lbs.) S. S. Brockway, Greenville, Pa.

Try a Galloway Sanitary Cream Separator in Your Dairy for Ninety Days

Stand it side by side with cheaper machines and you will see the difference in material and workmanship, design and skimming qualities. Stand it beside the highest priced machines, test them together for months! Higher priced machines will not run any easier or skim any closer and cannot be more perfectly sanitary or better built. We want you to be the judge—we will take your decision as final. Separators shipped from Waterloo, Council Bluffs, Kansas City, St. Paul, or Chicago, whichever is nearest to you.

PART IV.---One Squaw Man.

CHAPTER VIII—Continued.

"You know now—all about—them—and Annie. That was why I tried—to keep away from you—you know now."

But she did not know.

"You took his wife from him?" she said, in a maze of conflicting revelations; and Jack looked at Stuart, as she added, "and who were you?"

"He is my brother!" said Stuart, in answer to that look of Jack's. "He would not let me say it before—not for years. But he is my brother!"

The words were loud enough for all to hear, and there was a low chorus of surprise among the group. All concealment was about over for Genesee—even the concealment of death.

Then Stuart looked across at Rachel. He heard that speech, "You took his wife from him;" and he asked no leave of Jack to speak now.

"Don't think that of him," he said steadily. "You have been the only one who has, blindfolded, judged him aright. Don't fail him now. He is worth all the belief you had in him. The story I read you that night was true. His was the manhood you admired in it; mine, the one you condemned. As I look back on our lives now, his seems to me one immense sacrifice—and no compensations—one terrible isolation; and now—now everything comes too late!"

"He is—sorry," whispered Genesee, "and talks wild—but—you know now?"

"Yes," and the girl's face had something of the solemn elation of his own. "Yes, I know now."

"And you—will live in the hills—maybe?—not so very far away from—me. In my pocket—is something—from the mine—Davy will tell you. Be good to—my Kootenais; they think—a heap of you, Kalitan!"

The Arrow came forward, and shook reverently the hand of the man who had been master to him. The eyes roved about the room, as if in search of others unseen. Rachel guessed what was wanted, and motioned to the Indians.

"Come; your brother wants you," she said. And as they grouped about him and her, they barred out the soldiers and civilians—the white brother and child—barred out all from him save his friends of the mountains and the wild places—the haunts of exiles. And the girl, as one by one they touched her hand at his request, and circled her with their dark forms, seemed to belong to them, too.

"When the—snow melts—the flowers are on that ledge," he whispered with his eyes closed, "and the birds—not echoes—the echoes are in the mine—don't be—afraid. I'll go along—and Mowitza."

He was silent for so long that she stooped and whispered to him of prayer. He opened his eyes and smiled at her.

"Give me—your good wishes—and kiss me, and I'll—risk hell," was the characteristic answer given so low that she had to watch closely the lips she kissed.

"And you've kissed me—again! Who said—no compensation?—they—don't know; we know—and the moonlight, and—yes—mother knows; she thought, at last—I was not—all bad; not all—little mother! And now—don't be afraid; I won't go—far—klahowya, my girl—my girl!"

Then one indian from the circle unslung his rifle from his shoulder and shattered it with one blow of an ax that lay by the fire. The useless thing was laid beside what had been Genesee. And the owner, shrouding his head in his blanket, sat apart from the rest. It was he of the bear claws; the sworn friend of Lamonti, and the man who had shot him.

* * * * * *

At sunset he was laid to rest in the little plateau on Scot's Mountain that faces the west. He was borne there by the Indians, who buried in his grave the tomahawk they had resurrected for the whites of Camp Kootenai. Mowitza, rebelliously impatient, was led riderless by Kalitan. All military honors were paid him who had received no honors in life, the rites ending by that volley of sound that seals the grave of a soldier.

Then the palefaces turned again to the South, the dark faces took the trail to the North, and the sun with a last flickering blaze flooded the snow with crimson and died behind the western peaks they had watched light up one morning.

CHAPTER IX.

"Rashell of Lamonti."

THE echoes are no longer silent in Tamahnous Peak. The witchcraft of silver has killed the old superstition. The "something" in Genesee's pocket had been a specimen that warranted investigation. The lost tribe had left enough ore there through the darkness of generation to make mining a thing profitable. Above those terraces of unknown origin there is a dwelling house now, built of that same bewitched stone in which the echoes sleep; and often there is gathered under its roof a strange household.

The words of Genesee, "Be good to my Kootenais!" have so far been remembered by the girl who during the last year of his life filled his thoughts so greatly. His friends are her friends and medley as the lot would appear to others, they are welcome to her. They have helped her solve the problem of what use she could make of her life. Her relatives have given up in despair trying to alter her unheard-of manner of living. The idea is prevalent among them that Rachel's mind, on some subjects, is really queer—she was always so erratic! They speak to her of the loneliness of those heights, and she laughs at them. She is never lonely. She had his word that he would not go far. With her lives old Davy MacDougall, who helps her much in the mining matters, and Kalitan is never far off. He is her shadow now, as he once was Genesee's. Indian women do the work of her home. A school is there for any who care to learn, and in the lodges of the Kootenais she is never forgotten.

It seemed strange that he who had so few friends in his life should win her so many by his death. The Indians speak of him now with a sort of awe, as their white brother whose counsels were so wise, whose courage was so great; he who forced from the spirits the secret of the lost mine. He has drifted into tradition as some wonderful creature who was among them for a while, disappearing at times, but always coming back at a time of their need.

To Rachel they turn as to something which they must guard—for he said so. She is to them always "Rashell of Lamonti"—of the mountains.

From the East and South come friends sometimes—letters and faces of people who knew him; Miss Fred, and her husband, and the Major, who is a stanch friend and admirer of the eccentric girl who was once a rebel in his camp; and in reminiscences the roughness of his Kootenai chief of scouts is swathed in the gray veil of the past—only the lightning flashes of courage are photographed in the veteran's memory.

The Stuart and his wife and boy come there sometimes in the summer; and the girl and little Jack, who are very fond of each other, ride over the places where the other Jack Stuart rode—nameless for so long.

As for Prince Charlie, his natural affection for children amounts to adoration of the boy. Rachel wonders sometimes if the ideal his remorse has fostered for so long was filled at last by the girl whom he had left a delicately tinted apple-blossom and found a delicate type of the invalid, whose ill-health never exceeds fashionable indisposition. If not, no word or sign from him shows it. The pretty, ideal phases of domestic love and life that he used to write of, are not so ready to his pen as they once were through

his dreams and remorse. Much changed for him are those northern hills, but they still have a fascination for him and he writes of them a good deal.

"It is the witchcraft of the place, or else it is you, Rachel," he said, once. "Both help me. When life grows old and stale in civilization, I come up here and straightway am young again. I can understand now how you helped Jack."

His wife—a pretty little woman with a gently appealing air—never really understands Rachel, though she and Tillie are great friends; but, despite Tillie's praise, Annie never can discover what there is in the girl for "Charlie and all the other men to like so much—and even poor, dear Jack, who must have been in love with her to leave her silver mine." To Annie she seems rather clever, but with so little affection! and not even sympathetic, as most girls are. She heard of Rachel's pluck and bravery; but that is so near to boldness!—as heroes are to adventurers; and Annie is a very prim little woman herself. She quotes "my husband" a good deal, and rates his work with the first writers of the age.

The work has grown earnest; the lessons of Rachel's prophecy have crept into it. He has in so many ways justified them—achieved more than he hoped; but he never will write anything more fascinating than the changeless youth in his own eyes, or the serious tenderness of his own mouth when he smiles.

"Prince Charlie is a rare, fine lad," old Davy remarked at the end of an autumn, as he and Rachel watched their visitors out of sight down the valley; "a man fine enough to be brother to Genesee, an' I ne'er was wearied o' him till I hearkened to that timorous fine lady o' his lilting him into the chorus o' every song she sung. By her tellin' she's the first o' the wives that's ever had a husband."

"But she is not a fine lady at all," contradicted Rachel; "and she's a very affectionate, very good little woman. You are set against her because of that story of long ago—and that is hardly fair, Davy MacDougall."

"Well, then, I am not, lass. It's little call I have to judge children, but I own I'm ower cranky when I think o' the waste o' a man's life for a bit pigeon like that—an' a man like my son was! The prize was no' worth the candle that give light to it. A man's life is a big thing to throw away, lass, an' I see nothing in that bit o' daintiness to warrant it. To me it's a woeful waste."

The girl walked on beside him through the fresh, sweet air of the morning that was filled with crisp kisses—the kisses that warn the wild things of the Frost King's coming. She was separated so slightly from the wild things herself that she was growing to understand them in a new spirit—through a sympathy touched less by curiosity than of old. She thought of that man, who slept across on Scot's Mountain, in sight of Tamahnous Peak; how he had understood them!—not through the head, but the heart. Through some reflected light of feeling she had lived those last days of his life at a height above her former level. She had seen in the social outlaw who loved her a soul that, womanlike, she placed above where she knelt. Perhaps it had been the uncivilized heroism, perhaps the unselfish, deliberate sacrifice, appealing to a hero-worshipper. Something finer in nature than she had ever been touched by in a more civilized life—had come to her through him in those last days—not through the man as men knew him, and not through the love he had borne her—but through the spirit she thought she saw there.

It may have been in part an illusion—women have so many—but it was strong in her. It raised up her life to touch the thing she had placed on the heights, and something of the elation that had come to him through that last sacrifice filled her, and forbade her return into the narrowed valleys of existence.

His wasted life! It had been given at last to the wild places he loved. It had left its mark on the humanity of them, and the mark had not been a mean one. The girl, thinking of what it had done for her, wondered often if the other lives of the valley that winter could live on without carrying indelible coloring from grateful, remorse emotions born there. She did not realize how transient emotions are in some people; and then she had grown to idealize him so greatly. She fancied herself surely one of many, while really she was one alone.

"Yes, lass—a woeful waste," repeated the old man; and her thoughts wandered back to their starting place.

"No!" she answered with the sturdy certainty of faith. "The prodigality there was not wastefulness, and was not without a method—not a method of his own, but that something beyond us we call God or Fate. The lives he lived or died for may seem of mighty little consequence individually, but what is, is more than likely to be right, Davy MacDougall, even if we can't see it from our point of view." Then, after a little, she added, "He is not the first lion that has died to feed dogs—there was that man of Nazareth."

Davy MacDougall stopped, looking at her with fond, aged eyes than shone perplexedly from under his shaggy brows.

"You're a rare, strange lass, Rachel Hardy," he said at last, "an' long as I've known ye, I'm not ower certain that I knew ye at all. The lad used to be a bit like that at times, but when I see ye last at the night, I'm ne'er right certain what I'll find ye in the mornin'."

"You'll never find me far from that, at any rate," and she motioned up the "Hill of the Witches," and on a sunny level above them Mowitza and Kalitan were waiting.

"Then, lass, ye'll ne'er tak' leave o' the Kootenai hills?"

"I think not. I should smother now in the life those people are going to," and she nodded after the departing guests who were going back to the world. Then her eyes turned from the mists of the valleys to the whispering peace of cedars that guard Scot's Mountain.

"No, Davy, I'll never leave the hills."

Kloshe Kah-Kwa.

(The End)

Minnesota Poland China Breeders' Association.

To the Editor:—At a meeting called following the Gerlich-Barker banquet at Mankato, Minn., on February 16, 1917, the formation of the Minnesota State Poland China Breeders' Association was effected. A large percentage of the Poland China breeders of the state were present and a very enthusiastic meeting was held. The association was formed with the idea of bettering Poland China conditions in the state in every way possible and to assist in making the Poland China hog the most popular hog in the state and the country.

The following officers were elected for the coming year: J. M. Glazier, St. James, Minn., president; E. S. Barker, Mankato, Minn., vice president; P. W. Young, Prosper, Minn., secretary-treasurer.

The executive committee is composed of the above-named officers.

The membership fee was placed at $1 and all Minnesota breeders are urged to become members. Membership fee to be sent to the secretary.

Mr. Ray Davis, field secretary of the American Poland China Record Association, was present and outlined the conditions governing the futurity for 1917. Sufficient names were received to guarantee Minnesota's futurity.

A meeting of the executive committee was held following the organization meeting.

P. W. Young, Sec.-Treas.
Prosper, Minnesota.

WHITE SWEET CLOVER $3.90 Per Bu.
BIGGEST MONEY-MAKER KNOWN—INVESTIGATE
The greatest forage plant that grows. Superior to all as a fertilizer. Equal to Alfalfa for hay. Excels for pasture. Builds up worn-out soil quickly and produces immense crops, worth from $60 to $125 per acre. Easy to start, grows everywhere, on all soils. Write today for our Big 100-page free catalog and circular about unhulled and scarified hulled sweet clover. We can save you money on best tested, guaranteed seed. Sample Free.
A. A. BERRY SEED CO., BOX 984 CLARINDA, IOWA

ALSYKE $4.00 Per Bu. AND TIMOTHY
Northern grown, hardy, productive, cheapest and best pasture and hay crop. Plump, solid, strong germination. NOT SCREENINGS. Clovers, Timothy, Alfalfa, Seed Corn. 191 catalog and seed samples free. Northern-grown, hardy, pure seeds are cheapest because they make big, clean crops. All seeds guaranteed. Ask about our 1,000 Club whereby members get seeds at wholesale.
THE ADAMS SEED COMPANY, Box 50, Decorah, Iowa

IOWA'S GREATEST EARLY OATS! Experiments made everywhere in the corn belt and by plot tests at Experimental Stations prove it outyields other varieties from 5 to 25 bushels per acre and has been proven the right oats for the corn belt. Ours from the original Ames stock. 10,000 bushels stock ready for quick shipment. 1 bushel lots $1.25 per bushel, 5 bushel lots $1.20, 10 bushel lots and up $1.10. Order early before stock is exhausted. Demand enormous. Order direct from this ad or write for particulars. Also other kinds of oats, field and garden seeds

6 Fine, Hardy Rose Plants Free

To introduce our popular home magazine, THE PEOPLE'S HOME JOURNAL, into thousands of homes where it is not already taken, we offer for a limited period only, **absolutely free** for a year's subscription at 50 cents (the regular price), a Set of Six Fine, Everblooming Hardy Roses, all choice varieties, as follows:

1 WHITE COCHET. A grand Rose, snow-white, sometimes faintly tinged with the faint suggestion of pale blush. Magnificent forms of buds and flowers, marvelously beautiful in their perfection. The flowers are large and double. Of more than ordinary value in open ground.

1 RED DOROTHY PERKINS. A distinct variety in form, color and habit. The color is an intense crimson-maroon. Flowers are large and double, thirty to forty on a stem, and almost every eye on a shoot produces a cluster of bright blossoms.

1 CLIMBING CLOTHILDE SOUPERT. In a single season small plants will grow fifteen to twenty-five feet. These roses are large, round, full and double, and deliciously sweet. The color effect is magnificent—ivory-white, shading toward the center to a silvery rose. A profuse bloomer.

1 MLLE. FRANCESCA KRUGER. The striking color of this handsome Rose places it at once at the front as a bud producer in the open air. In its shading of deep coppery-yellow it stands unique and distinct from all others. The flowers are of good size and very symmetrical.

1 MRS. BEN R. CANT. A fine garden variety of even shade of deep rose. A very free grower, in fact it is one of the strongest growing Roses known. Its flowers as continuously and freely as a China Rose, and is especially fine in autumn.

1 QUEEN OF BEDDERS. This is without any doubt the very best of red Roses for bedding. The flowers are of large size and of a fiery scarlet, a color seldom seen in Roses. A bed of this Rose produces a mass of red equal to a bed of Geraniums.

The six rose plants described above are grown by one of the largest and most reputable rose growers in the United States. They are not cheap, common roses, but well-known standard varieties. We send strong, healthy, well-rooted, 1-year-old plants, warranted true to name and color. They are carefully protected in the packing, and are shipped, prepaid, from the greenhouses where they are grown, directly to our subscribers, thus receiving but one handling, and are guaranteed to reach their destination in good order.

THE PEOPLE'S HOME JOURNAL

has been published for over thirty years, and goes regularly every month into over nine hundred thousand homes, where it has reached the very hearts of its readers. Its widespread popularity is no accident—it is the natural outcome of a policy consistently adhered to from its very beginning over a third of a century ago. The publishers believe, and the success of the magazine has proven it, that the great majority of people read magazines for **both** pleasure and profit. In other words, while THE PEOPLE'S HOME JOURNAL maintains a number of excellent departments for the housewife, each conducted by an expert in her line, the publishers believe that for the greater part of her reading the busy housewife wants to get away from the practical side of life with its oftimes perplexing problems that demand her care and attention for ten to twelve hours of the day, and wants recreation, entertainment, inspiration for mind and body—wants to read bright, cheerful, optimistic, wholesome refreshing stories and articles dealing with the emotions of life. Such is THE PEOPLE'S HOME JOURNAL, edited for all members of the family—in fact, it is a member of the family in over 900,000 homes—conceded to be the most indispensable publication in the magazine field to-day, catering to the tastes and needs of every American household.

OUR SPECIAL OFFER—To any one who will send us 50 cents in payment for a subscription to THE PEOPLE'S HOME JOURNAL before May 31st, we will send the Magazine for one year, and in addition will send **free** the full Set of Six fine Rose Plants above described, both fully prepaid.

Our offer is remarkably liberal, and every one who is fond of flowers should take advantage of this unusual opportunity to secure a fine collection of choice rose plants absolutely without cost. Address all orders:

Blacklegoids

NO DOSE TO MEASURE.
NO LIQUID TO SPILL.
NO STRING TO ROT.

BLACKLEGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

TAKE NO CHANCES.

Don't wait until your calves become infected. This means certain loss—there is no *cure* for blackleg. Vaccinate now—before the deadly disease shows itself.

THE COST IS SMALL.

BLACKLEGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.

Write for free booklets on Blackleg, with full information about Blacklegoids.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Scours in Calves.

Will you please tell me what is the best home remedy for scours in calves?

If the calves are troubled with white scours at birth there is very little that can be done. If the trouble comes on shortly after birth the first thing to do is to cut down on the quantity of milk if the calf has been having a liberal supply, and then give a physic of one to two ounces of castor oil. Follow this with the following: Fluid extract of rhubarb, three drams; magnesium carbonate, three drams; paregoric, six drams; and sirup enough to make six ounces. Give a tablespoonful in a small amount of water to each calf two or three times daily.

Loss in Calves.

Last spring my calves went wrong. They would get down and could not get up. They seemed as if they could not use their legs. They would lie and chew their cuds, eat grain and hay, and drank well. The third one came down and could not even hold its head up. It lived nine days and died. Th. other two got so they could get up in about two weeks, but they did not do well this summer. These calves were from three weeks to three months old. They were sucking the cows and were fat. I was feeding them oats, corn, oil meal and timothy and clover hay. They were turned out in a. lot in the daytime. The first of last December another calf four months old was taken sick and died in a week and another one the other day. What can I do for them? These calves were all vaccinated for blackleg, some of them as long as six weeks before they were sick. They seemd to be all right until I would find them down.

From the line of symptoms given it would be hard to make a diagnosis. You should have had your veterinarian make an autopsy of one or more of the dead or dying animals and he might have been able to find from appearances of body organs what was causing the trouble. We would advise you to do this in case you have any more go this way.

Gid.

A few days ago one of my ewes did not come to the feed trough with the rest. I drove her up and she started to eat and I thought no more about her until in the evening when I gave them their water. She wouldn't drink and seemed to have a fever. The next morning she was off by herself and would neither eat nor drink. She held her head very high and would draw it in toward her body and wink her eyes real fast and her head seemed to tremble. The following morning she could not get up and when helped up she would not stand very long. I thought she was bound up, as her droppings seemed dry, so I gave her a physic of salts and raw linseed oil. Now she holds her head down when helped up and is continually walking in a circle, going to the right. She will drink now and eat oats and bran if it is placed in her mouth, also hay. Now I have another ewe going the same way. They keep chewing all the time and in the early stages they run a greenish colored water from the mouth. Both of these ewes are due to lamb February 23d. Have had a rack full of clover and timothy hay mixed all winter, plenty of salt and water, also oats and a stock food. They seem to want to press their heads against the barn or fence when they stand and will push real hard. Any information you can give will be highly appreciated.

The above symptoms are often noted in the condition known as gid. This is caused by the cystic stage of the Taenis Coenurus, being located in the cranial cavity. The disease may terminate at the stage of excitement, owing to the death of the embryo of the parasite causing the trouble. The outcome, however, is very unfavorable, even if treated in the early stages. When first noticed, cold applications to the head and the administration of a good physic are indicated to alleviate the symptoms produced by the inflammation. Trepanning may be resorted to, but this should be done by a veterinarian, and even then the results may not be satisfactory.

ADVERTISEMENT.

A California Opinion on Compensation

SOME years ago the Los Angeles, California, Chamber of Commerce in a signed resolution made this brief statement:

> *"The confiscation of the property of the vineyardists and brewers without proper* ***compensation*** *is dishonest and* ***wrong*** *and would be a blot upon the history of California for all time to come."*

Would not confiscation *without compensation* equally besmirch the history of Wisconsin?

Our State has won fame the world over for its progressive laws—for its initiative in protecting the public welfare. Shall we, at this stage, hesitate to take the step that will correct a glaring injustice?

Today the law protects *you* in the matter of *compensation* if your property or business is damaged by adverse legislation; it does not protect the Brewing Industry. Why? Doesn't it seem that something has been overlooked and should be made right without delay?

* * * * * *

The Brewing Industry does not ask exception or favoritism; it does ask the protection, the justice, the rights that *you* enjoy. Your property, your business cannot be confiscated or destroyed without *compensation;* the law provides for that. Should not the Brewing Industry—the largest tax-payer in the State—be accorded equal justice?

This plea is made not in the interests of the property owners of the Brewing Industry alone, but for consideration of the welfare of

Fifteen thousand persons directly employed in the Brewing Industry—

Twenty-eight thousand persons employed in the retail trade—

Thousands of farmers who produce the raw materials that enter into brewery products.

Should not these many thousands of loyal Wisconsin tax-payers and home-owners be entitled to justice and fair play? They are *your partners* because they have helped pay the taxes and have helped to build up the state that *you* call home—that gives *you* protection. They are *your partners* because you are represented by your Government and your Government has derived a large share of its income (taxes) from the Brewing Industry.

* * * * * *

If one partner quits, the other partner should be *compensated.*

Compensation is fair for one and fair for all.

Compensation now protects *some*—let the law be so amended that *compensation* will protect *all.*

The Brewers of Wisconsin

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

The Stephenson Dispersion.

EVERY Holstein breeder who is a reader of this paper and every farmer who has ambitions to be a breeder of Holstein dairy cattle will be interested in the Stephenson Farm dispersion sale to be held at Lake Mills, Wis., April 6th and 7th. In this sale 175 head of stock, comprising one of Wisconsin's celebrated Holstein herds will be offered. There are a choice lot of daughters of Admiral Walker Prilly 72923, senior herd sire, including 25 tested daughters of which 18 have yearly records. Some idea of the production of these cows may be obtained from the advertisement which appears on page — of this issue. In this sale will be offered 40 sons and daughters of King Walker Pietertje Segis 127857, whose first 13 dams averaged 30.7 pounds. This bull is a grandson of King Segis, whose granddaughter, Segis Fayne Johanna, holds the world's record for production of butter under seven-day test. Other granddaughters which have made phenomenal records are Fancher Farm Maxie with 46.84 pounds, and Mabel Segis Korndyke with 40.32 pounds. This sale will be held in the barns of the Lake Mills Holstein Breeders' Consignment Sale Company and will be under their management. Mr. F. H. Everson is the manager in charge. He has managed some of the most successful Holstein sales ever held in Wisconsin and has a record for integrity to his credit. Catalogs for this sale may be obtained now by addressing F. H. Everson, Lake Mills, Wis. Every reader of this paper should have one of these catalogs in order to look over more carefully the offerings which are to be made in this great sale. Please mention The Wisconsin Farmer in your letter asking for catalog.—Adv.

Bunker Hill Farm Offering.

MR. F. S. BUNKER, proprietor of the Bunker Hill Farm, near Kilbourn, Wis., recently sold to S. J. Griggsby, of Illinois, the Short-horn heifer, American Duchess 96th. This heifer was out of Closs Girl 5th which gave over 10,000 pounds of milk in 1916. This same cow gave over 9,000 pounds of milk in 1915 and about the same in 1914. Mr. Bunker advises us that he has for sale three superior Polled Durham bulls, two dark roan and one dark red from 11 to 14 months of age, described as well grown and fit to head the better class of registered herds. The red is an outstanding show bull if fitted. These people also have two reds with star, farmer bulls, nicely Polled and nine months old, which will be sold cheap to make room. They are all by the greate Red Sultan X9404 and out of some of Mr. Bunker's best cows. Mr. Bunker has more cattle than pasture and will be willing to dispose of some of his Polled Durham females if taken soon. All of the animals in this herd are tuberculin tested and not a single calf has been lost in two years, which is pretty good proof of a healthy condition. In writing to Mr. Bunker about any of this stock be sure to mention The Wisconsin Farmer. —Adv.

Pabst Stock Farm.

F. A. CHAPIN & SONS, of Cheney, Minn., just purchased a son of the junior herd sire, Korndyke Segis Johanna. The cross of this bull on the daughters of King Pontiac Champion is bringing great results. They have a number of other youngsters out of high-record dams having this combination breeding that are worthy of careful inspection. Mr. A. B. Spooner, Jr., of San Luis Obispo, Cal., purchased seven bulls, most of which were the King Pontiac Champion-Korndyke Segis Johanna cross. During the past few weeks the Pabst Stock Farm sales have been from California to New Jersey and Minnesota to Georgia. See page 31.—Adv.

"Sold Out."

SO Geo. D. Sprain & Sons, West Salem, Wis., write. They have had a good year and much of their success has been due to the fact that they have good herd boars. They have a herd of big Duroc brood sows and we predict that Fred will have some great spring pigs to offer later. Keep their herd boars in mind. Royal Top Col. by Putt's Top Col., Grand Model 21st by the noted Grand Model and a son of Prince Illustrator, out of a Col. Gano dam. Spring pigs will be shipped later but get your order in early and get the pick. When writing please mention this paper.—Adv.

More Pleasure From Your Ford.

FORD drivers who use the irreversible worm steering gear made by the E. H. Sprague Manufacturing Co., Omaha, Neb., find much of the shock and strain of driving removed. The steering gear absorbs the vibration and makes driving a much pleasanter and easier task. It is also a safeguard against turning turtle or going into the curb. Our readers who are interested in knowing more about this convenient and inexpensive attachment may have it by writing Department 14, E. H. Sprague Manufacturing Company, Omaha, Neb.—Adv.

Bred Gilts For Sale.

H. A. DERENTHAL, Wykoff, Minn., raises Chester Whites by the hundreds, consequently he generally has something to sell. He has some very fine bred gilts for sale that will farrow in March or April and they are bred to those good boars doing service in this herd. This Chester herd is rightly named when called the Champion Herd of the Northwest. He has the good kind priced within reason. Now is the time to buy, but order early, for the good ones that can be bought are going to be scarce. Mention this paper.—Adv.

Quirin and Miller & Brown Joint Sale of Percherons.

THE well-known breeding firms of C. P. Quirin and Miller & Brown, Marcus, Iowa, have joined forces and will hold a joint sale of Percherons in the sale pavilion in the horse barns at Sioux City, Tuesday, March 27th. They have listed 40 head, half mares and half stallions. It is an offering of very choice animals throughout. These two studs have been headed by as good stallions as the breed affords. Until recently the Miller & Brown stud was headed by the great Calypso, a stallion too well known to require any remarks as no stallion has sired more prize winners. Mr. Quirin has now at the head of his stud the International champion, Barnum, which stallion is assisted by the state fair champion, Konfluent. Mares by Barnum have been bred to Konfluent. Kerchious is now standing at the head of Miller & Brown's stud and about half of the mares have been bred to him. This stallion has likewise been a blue ribbon winner at state and Interstate fairs. Here is an unusual opportunity to secure high-class mares, several of them of unusual size, many well-matched pairs of both blacks and grays. The stallion end is also very high class, including a number of ton stallions that have been prize winners at Huron and at Sioux City. There are big, heavy-boned, vigorous, flash-going stallions that should give the purchaser the very best service on the stand. It is doubtful is a better opportunity will be had for the purchase of good Percherons at public auction during the season. The time for buying a stallion is right at hand. No time is to be lost in running around the country looking at many different bunches. Here you can come and select a good horse and buy him at your own price. Remember that these gentlemen live at Marcus, at which place you should address them for copy of the catalog, but the sale will be held in Sioux City, Iowa, thus giving every man an opportunity to reach the sale. Mention The Wisconsin Farmer in writing for catalog.—Adv.

Percheron Dispersion.

THIS is the last call to the dispersion sale of Percheron horses to be held Wednesday, March 21, 1917, at the state fair grounds, Milwaukee, Wis. Breeders all over the entire middle West recognize the high class of Percherons bred by Lewis Lewellin & Sons, Waterloo, Wis. The winnings of this stud at the Wisconsin State Fair and other fairs in the state have compelled the attention of breeders everywhere to their superior merit. The stud of Louis P. Sutter, Delavan, Wis., is of equal merit. When speaking to Mr. Fred Southcott, manager of Gustave Pabst Farm, with regard to this stud he said: "I judged this lot of horses soon after they were imported, at the Elkhorn Fair. They are as fine a lot of horses as I ever saw. They carry especially heavy bone and are of excellent conformation." You will be safe in taking Mr. Southcott's word, as he is a judge of unusual ability. Catalogs showing breeding and description may be obtained by writing James G. Boyd, sales manager, 426 South Sycamore St., Milwaukee. When writing kindly mention that you saw their advertisement on page 29 of The Wisconsin Farmer.—Adv.

Gilts All Sold.

DURING the past two weeks we have received several letters from our swine advertisers advising that they were sold out of bred gilts. J. D. McDonald writes that he has sold 45 Poland China gilts at an average of $67. All he has to offer now is fall boars and sows, that weighed up to 200 pounds February 23d, and there are show prospects among the lot. They are sired by his good herd boars and out of matured dams. Mac has reserved 29 sows for his own use and with all due respects to the other good herds of the state we believe that he has retained 29 of the best sows we have seen. They have been bred to the good boars, Matchless Wonder, Crow's Progress and Jumbo Giant. Orders for spring boars are now being booked to be shipped at three months of age. J. D. McDonald has the goods, write him at North Bend, Wis.—Adv.

Some Good Fall Pigs.

R. MEINKING, Bangor, Wis., has some of the largest fall pigs that we have seen, up to date. Several of them will weigh 200 pounds or over. He has one litter of 11 that are outstanding and there are two boars in this litter that look like show prospects. Anyone wanting real choice Poland China fall pigs should write Mr. Meinking. Please mention The Wisconsin Farmer.—Adv.

Write Constance.

YOU can't buy any bred sows of F. R. Constance & Sons, Waupaca, Wis., but they have some fall Durocs, boars and sows, that are really choice. They weigh 160 pounds or over, are stretchy and have worlds of quality. Attractive prices will be made for pairs and trios. We gladly recommend these breeders to prospective buyers.—Adv.

Bacon's Jerseys.

FARMERS and breeders will find it worth while to investigate and attend the sale of Jerseys to be held by C. W. Bacon, Burke, Wis., March 29th. Mr. Bacon will offer a fine lot of Jerseys, splendid serviceable animals, the kind the farmer wants. See his advertisement on page 30 and write at once for further information.—Adv.

Write Martiny & Son.

RILEY MARTINY & SON, Baraboo, Wis., write that they can spare no more bred gilts. Now they offer boars and sows of fall farrow and they are right in every way. If you want a boar out of some of those good sows, send in your order now. They have some good ones. They also have seed corn for sale. Write.—Adv.

Metz & Sons' Percherons.

AN attractive lot of Percheron stallions and mares are for sale by S. Metz & Sons, Homewood, Ill., whose advertisement appears on page 29. These horses are all good, young ages, well bred and well made and will be sold worth the money. Write them your wants or go and see what they have to offer.—Adv.

Crow's Progress For Sale.

J. D. McDONALD, North Bend, Wis., has some great sows on his farm sired by Crow's Progress. Inasmuch as he has three crops by him, he has decided to sell him. Here is a tried boar and he should go to a good herd. The first check for $100 gets him. Write at once.—Adv.

IN a letter received from the Upland farms, Walworth, Wis., they write as follows: "Enclosed you will find another pedigree for a change in my advertisement. This is a very fine bull, nice, straight back, well-sprung ribs with a good barrel. In fact, he is a nice individual—most all white. Will weigh 1,000 pounds or more. This is the best bull I have, but I have him offered at $125. Yours truly, J. H. Travis."—Adv.

SALE DATES.

Jersey Cattle.

June 5, J. R. Linscott, Holton, Kan.

DISPERSION SALE

QUIRIN AND MILLER & BROWN
JOINT SALE OF
PRIZE PERCHERONS
FROM MARCUS, IOWA, SALE IN THE SALE PAVILION AT
SIOUX CITY, IOWA, TUESDAY, MARCH 27

THESE two studs have been headed by the greatest stallions of the breed, viz.: CALYPSO, many times a champion and sire of champions, until recently headed the Miller & Brown stud, while the International champion BARNUM, and the State Fair champion KONFLUENT, now head the Quirin stud. Several sons and daughters of the champion BARNUM are included. The mares by him are bred to KONFLUENT. About half of the offering of mares are bred to the first prize winner, KERCHIOUS. Only a few yearling fillies. Developed mares have great size and are the rugged sort that make dependable producers. Several well-matched pairs, both blacks and grays. ONE OF THE GREATEST OFFERINGS OF PERCHERONS TO BE SOLD THIS SEASON.

Stallions are from 2-year-olds to 6-year-olds, mostly blacks and grays; several ton stallions that have been prize winners at state fairs. This sale offers an excellent opportunity for the selection of big, rugged, vigorous, heavy-boned stallions that should give most excellent results on the stand. 20 stallions—good ones. P. McGuire, auctioneer. Catalog sent upon request. Remember the sale will be held in Sioux City, Iowa, but for catalog address either

News of the Sale Ring.

Forge Dispersion Sale.

The dispersion sale of Mr. Forge's herd of pure-bred Holsteins at Burlington, Wis., March 7, 1917, clearly demonstrated the demand for pure-bred Holstein cattle of merit. All the cows in the herd but two had A. R. O. records and most of them were in calf to a 31-pound sire. Forty-eight head, or the entire number sold, averaged $285. Thirty-three females averaged $333.87 and 15 bulls averaged $189.06. The young bulls sold especially well. However, the senior herd sire did not bring within several hundred dollars of the price for which he should have sold. Rust Bros., of West Allis, took advantage of this bargain. The cow, Portage Pietertje Walker with a 20-pound two-year-old record, sired by King Walker and out of the 31-pound cow, Portage Pauline Paul 2d, was the sensation of the sale. Fred Southcut, who was buying for Gustave Pabst, after a lively brush with E. J. Steely, of Waterloo, Iowa, bought the cow at $1,150 and topped the sale. Mr. Steely was a good bidder on the best animals of the sale and bought several cows that hsould be a credit to the state from which he came. Nathan Dickinson & Son took advantage of one of the best bargains of the sale by buying Maud Pietertje Walker for $550. Crites Bros. were the strongest local buyers and seized their opportunity to get the right kind of animals with which to start their herd. The following is a list of prices:

A Great Sale of Percheron Horses

Complete Dispersion of Two Great Percheron Studs

Wednesday, March 21, 1917, at the State Fair Grounds, Milwaukee, Wis.

60 Head Comprising the Studs of Louis Lewellin and Sons, Waterloo, Wisconsin, Lewis P. Sutter, Delavan, Wisconsin

THE L. P. SUTTER OFFERING

CONSISTS of a high-class lot of imported stallions and mares. These horses were personally selected in the famous Percheron horse breeding districts of France and imported by Mr. Sutter in 1914 for his own private stud purposes at Delavan, Wisconsin. **The stallions** are coming four and five. They are the **big, ton kind** with **tremendous bone** and **substance. The mares** are coming four, and under. Only two over five. They include a nice lot of big, drafty animals. The colts in the sale will show the kind they are capable of producing. It's an exceptional opportunity to buy **imported** Percheron stock, very little of which is now on the American market. **By all means come and look them over on sale day.** You will find something to suit your wants. Don't miss the sale.

THE LEWELLIN & SONS' OFFERING

THIS offering consists of a grandly bred lot of home bred stallions and mares, the result of years of careful selection and mating at the Lewellin Percheron studs at Waterloo, Wisconsin. Also two grand **imported** mares. This offering requires no introduction to the Wisconsin horse breeding public. Its frequent appearance and **successes** at the **Wisconsin State Fair** have made it well known to every horseman in the state. In 1915 and 1916 it won the **Wisconsin bred and owned championship** on stallions, and also on mares; and in 1915 the **championship on mares** in the open to the world classes. Besides these, it has won many first and second prizes both in singles and groups. All of these prize-winning mares, stallions and colts are included in this sale offering. They are proven quality and regular producing stock.

For Catalogs Address **JAS. C. BOYD, Manager, 426 Sycamore St., Milwaukee, Wisconsin**

Sale called at 10 o'clock A. M. **Lunch served on the grounds** **Auctioneer, Joe Walker**

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

MR. STALLION BUYER

WE still have on hand a large number of two coming three Percheron stallions, those colts now weigh up to 2,110 pounds, and if you are looking for an outstanding good one to head your herd of mares you should write and get prices on those colts. Our three-year-old and aged Percheron stallions are the best lot w ever had on hand. They weigh up to 2,300 pounds. In Belgians we offer a very strong lot from one to six years old. Among them is Bizarrie, a five-year-old sorrel chestnut stallion weighing 2,300 pounds. This stallion is as good as money can buy and fit to go any place. He must be seen to be appreciated. We have on hand a number of stallions from six to ten years old that have made seasons. Those horses weigh up to 2,100 pounds, and we will sell them very reasonable. We have a horse for every purse and know we can save you money. We want to buy 50 head of one coming two Percheron and Belgian stallions. Write us what you have. Send 25 cents in stamps for large horse hanger. Address

FRANK P. SHEKLETON & SONS - LAWLER, CHICKASAW COUNTY, IOWA

SHORT-HORN CATTLE.

$50,000 IN SHORT-HORN PRIZES

This Association has appropriated for 1917 approximately $50,000 for prizes at state fairs, interstate fairs, live stock shows, state and interstate association shows and sales from New England to the Pacific coast and from Canada to the Gulf.

Pick your show things now and begin preparation for these contests, that you may claim a share of the prize money.

1916 was the biggest Short-horn year in the history of the breed and 1917 bids fair to far exceed it.

JERSEY CATTLE.

WHAT IS MILK ?

is the title of a booklet which demonstrates in a convincing way the superiority of **Jersey milk.** Gives tables showing its value compared with other foods. Prof. R. M. Washburn of the University of Minnesota, says:

"A quart of Jersey milk naturally yielded, is worth 50% more than the average standardized milk offered on our city markets."

Get the facts in this meaty booklet, "What is Milk?" A postal brings it. Send today.

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - WAUKESHA, WISCONSIN

Order Them All

ALL—

On Free Trial!

Order them all—yes, all—every cream separator that you think is worth considering. Say to every manufacturer: "I'm willing to try your machine if you will send it on free trial."

Get the Melotte on this free-trial offer and put it alongside of all the others. If any manufacturer refuses a no-money-down free trial, ask him *why*—ask him what he is *afraid* of.

When you make this competitive test, *watch* results. Keep a record. See which skims the closest. See which gives the most cream (and then figure out which will give you the greatest profits). Notice which turns the easiest. Which has the most substantial construction. Which will stand the most wear. Notice all these things—and decide. As far as the Melotte is concerned, here is the Melotte offer:—

Not a Cent Down We'll ship you the great Belgian Melotte without a penny down. Just say you want to try it. (On this comparative test or test it alone, as you prefer.) No papers to sign, no formalities of any kind. There will be no agents, no salesmen around to bother you about the Melotte. We will not try to influence your decision in any way. Make any cream separator test you can think of. And then after

30 Days' Free Trial let us have your judgment. If you say you do not want to keep the Melotte, all right—send it back *at our expense*. But if you decide that it is, indeed, the world's greatest cream separator, keep it on our present rock-bottom, monthly-payment offer.

Now, when we say "Order them all," we mean just that. We are glad of the opportunity of testing the Melotte alongside of other machines. Because we know that when you finally choose the Melotte, you will be better satisfied—and you will be a booster for us. But we make the same free-trial offer, even if you want to test the Melotte alone. Send the coupon today for full particulars.

Stupendous Offer!

The Rock-Bottom Price Direct on Shipments NOW!

Valuable Book Free! "Profitable Dairying"

Send the Coupon Today!

The book is the work of B. H. Benkendorf, Wisconsin Dairy School-Agricultural College, Madison, Wis., and K. L. Hatch, Winnebago County Agricultural School, Winneconne, Wis. 88 pages. Contains no advertising whatever. A real, practical, commonsense treatise, telling everything about cows and dairying—how to feed and care for cattle—how to make more money out of your cows. Every farmer should have this book in his library. It is worth while getting now, even if you are not considering a cream separator at present.

We will send you this valuable book free upon receipt of the coupon. Also our new catalog describing fully the Melotte self-balancing bowl cream separator, and telling all about our rock bottom, 30 day free trial, easy payment offer. Send coupon while shipment lasts.

$7.50 Down *After* 30 Days' Free Trial and You Keep This Genuine Melotte.

Thirty days free trial first. Then if you decide to keep the Belgian Melotte, you pay only $7.50 down and the balance of the rock-bottom price on the same easy monthly payments.

Seize this opportunity to get a highest grade separator on this stupendous offer. We recommend the Imported Belgian Melotte—the separator with the wonderful self-balancing bowl that cannot get out of balance and vibrate—especially now as we are making our rock-bottom price offer. This is your chance to get a separator that will never bother you, that will always give you all your cream, and that you will be proud of all your life. Send for the catalog.

Free Duty—Save $15.25

The high tariff has been cut right off—the great Melotte comes in absolutely free of duty. Good for the American farmer! He gets the great Melotte Cream Separator at an *extra reduction of $15.25!*

The high tariff and patent arrangements have kept the Melotte out of reach of the American farmer. Now this handicap is off. You can get the world's greatest separator now without this excessive duty charge—and on our rock-bottom, direct offer.

Repairs—

are hardly ever needed on the Melotte on account of its self-balancing bowl—no repairs compared with other separators.

BUT — We have on hand repair parts for ten years ahead. That is the first thing we attended to, a huge stock of repairs when we introduced the Melotte in this country, and it has been a gratifying surprise that we are using hardly any of that stock.

Wonderful Record

The Melotte has won the international prizes at Brussels, Vienna, London, Paris, Amsterdam, Milan, St. Louis, etc.

One Melotte has been running at Remincourt, Belgium, the equivalent of 54 years of actual work without appreciable wear.

Here is *one* great reason for Melotte superiority: The bowl is *self-balancing*—it hangs down and spins like a top. Can't get out of balance. Turns so easily, it spins for 80 minutes after you stop cranking unless brake is applied. The Melotte *is guaranteed for 15 years.* Send coupon for Melotte catalog and details of our offer. **Seize this opportunity while this shipment lasts.**

Spring Work on Badger Farms.

By PETER C. SWARTZ,
President Wisconsin Alfalfa Order

THERE are many things which we tillers of the soil should attend to at once. I am not going to try to give advice to others which I am not trying to work out myself on Cornfalfa Farms. Let us spend a few minutes thinking of some of the things which ought to be done in the springtime. This season's spring work is already here and before we know it, it will be past. Can we say that all our manure is hauled out and spread, all our seed corn is thoroughly cleansed and graded and tested for germination? Going a step back of this we might even ask whether all of us have our seed grains purchased yet, or whether we took the proper precautions through the winter to care for our seed. How about our seed corn and in what condition are the seed potatoes? Do we need any repairs for our machinery? If so, are we going to let it go until the last day just before we need the machinery and when mechanics are so busy that it takes a long time for them to get a job out? Have we made an invoice of our machinery to see whether we need anything new? If we do need a machine or two, how much time have we spent looking the matter up and investigating the merits of the various makes? How about our fencing? Is it all in good shape or will we find it necessary some day to quit the fields in order to do some fence repairing, which must be done to keep our live stock on the farm? Is our harness all oiled up and repaired and ready for use, and have we been getting our horses in shape for their work? I believe that we should have colic and gall cures always on hand ready for use when we need them. Furthermore, the proper preparation should be made to take care of the new-born lambs, colts, pigs, chickens, etc. These babies are all dandies when born and we should spend some time and thought in planning to keep them so.

On a great many farms in Wisconsin the home folks have been talking for some time about some new improvements. Why not have these things all planned out now so that they will not occupy our attention when the real outdoor spring and summer business comes on us with a rush? Now is the time when all these things should be done and then we can say, "Our seed grains are waiting for the soil," and when the soil is ready we will give the seeds a bath of about ten minutes in a solution of one pint of formalin to forty gallons of water. Nothing pays better than to put "clean clothes" on our seed grains before they enter the soil. How many of us can say at sowing and planting time that we have properly washed the clothes of our seed grains and made ready for their reception in the moist, warm soil? You may be assured that if you do not adopt protective methods against smut, the thresher will know it when he comes around in the late summer or fall, and we will be the losers if we fail to properly take care of our seeds now. Smut means a loss in bushels to the threshermen and, furthermore, it means a still greater loss to the man who has invested his money in land and his time in the growing of grain. Sooner or later it all "comes out in the wash" just what we have been doing.

HORSES READY FOR WORK ON CORNFALFA FARMS, WAUKESHA COUNTY, WISCONSIN.

We do a great deal of talking about seed corn. By seed corn we mean corn which will grow plants, strong, sturdy plants. Let's test our seed corn now and make a much larger profit by fattening the chickens with that which is unfit for seed. Many of us who have not artificially dried the seed will find a sufficient quantity to fatten the hogs if the weak and dead ears are culled out and fed. Let us always remember that the place for such ears is in the stomachs of stock and not in the soils. This is true and there are no "ifs nor ands" about it. Make someone responsible now to take care of this situation. It may be yourself or the hired man, or mother or boy or girl who goes to school and ropes the teacher into the game, but be sure to get the seed corn testing knot well tied on some one so that there will be no forgetting it.

This same trouble arises with our seed potatoes. We should get some "clean clothes" put on these, too, but if the seed is run out, mixed, filled with diseases, etc., the cooking kettle is its proper place and not the soil. Make a change this year and get certified seed.

I have mentioned the matter of repairs for machinery. It is a very important thing to look over all the farm machinery and order all the repairs needed early. It is remarkable how slow freight and express may be sometimes when we farmers are in a terrible hurry. It is certainly unlucky for us if we must go out in the field or fence corners and shovel out or dig out our machines to look them over for repairs. That however, happens with some of us and such a sight should furnish an impetus for improvement in the year 1917. This ought to lead to sheds for the housing of farm machinery.

I have said something about fencing. Certainly it is a thing we should all pay more attention to before it is too late. When it is too late fencing costs a great deal more money than a good legal fence ought to cost. Furthermore, we all know that poor fences start neighborhood quarrels, damage suits, law suits and result in our stock being cut up. Poor fences cause trouble and untold damage to grain and corn crops, and when you sift many of these cases down it is all too often due to the lack of only one fence post. The writer knows these things from experience and I have had visions of places where fence posts have been needed on Cornfalfa Farms. I know whereof I speak when I say it is really worth while to give the fences serious consideration in the early spring of the year.

In conclusion, I want to say a few words about the care of the horse. The horse is our power to do many different things for us and we should always have this power ready to command. I have found that there is one thing especially which many of us fail to look after and which is the main cause of many ailments of which the horse becomes a victim. This particular thing which I have in mind is the horse's teeth.

(Concluded on page 11.)

BIG SMALL GRAIN CROPS CAN ONLY BE PRODUCED WHEN GOOD SEED IS USED.

CURRENT EVENTS

AFTER a three-day revolution, the czar of Russia abdicated last week and his younger brother Grand Duke Michael, was proclaimed regent to rule in his stead. The revolution was not unexpected, but the abdication of the czar was unexpected. The revolution was brought about by the fact that the czar and the government has been more or less under German influence for many years past and the people revolted in the interests of a national spirit. The czarina is a German princess and most of the czar's advisers are either German or pro-German Russians. There has been much talk for more than a year past that Russia might conclude a separate peace with Germany, deserting her allies. There has been talk, within the last few weeks, of an alliance between Russia, Germany and Japan. The czar was in the field when the revolution took place, but his orders adjourning the duma (the Russian congress) precipitated the revolution. The people revolted, practically without plan or leadership, according to the early reports, and one by one the regiments of troops went over to them, so that seldom, if ever, in history has so far-reaching a revolution been effected with so little bloodshed. The revolution is looked upon in England and France as a great blow to the Teutonic cause, as Russia will now be all Russian and will cease to have a strong pro-German leadership. The czar had ruled for twenty-one years, but was conceded to be weak and inefficient.

RELATIONS between the United States and Germany continued practically unchanged last week, despite the fact that a German submarine destroyed an American ship, the Algonquin, bound for England with food supplies. The Algonquin was of American registry and flew the stars and stripes, but it was fired upon several times and at the last the submarine sent men to the hold of the American vessel to fire dynamite and hurry the work of destruction. None of the sailors lost their lives. The United States is hurrying the work of arming its merchant ships for just such an attack. President Wilson holds that little, or nothing, more can be done at present; inasmuch as he has severed diplomatic relations with Germany and is arming merchant vessels against that country, two acts which are but little short of an actual declaration of war. With a nation-wide railroad strike imminent, further tying up traffic and complicating matters, and with the German situation continuing so critical, the burden of the president is indeed heavy these days.

PRESIDENT WILSON has called congress to convene, in special session, on April 16th. This action was made necessary because of the failure of the last congress to pass several appropriation bills and to put through legislation which the country urgently demands. It is stated that were congress not to meet and appropriate money, several branches of the government would be absolutely without funds and the West Point military academy would have to close its doors within the next two or three months. The new congress promises to be fairly evenly divided politically. The senate is democratic, but by a reduced majority. The complexion of the house is still in doubt, the democrats and the republicans having about an equal number of members, with a half dozen progressives, socialists and prohibitionists holding the balance of power. Champ Clark, of Missouri, will be the democratic candidate for speaker, and James Mann, of Illinois, the republican, so the grain belt is sure to dominate, whichever party wins. Congress may be in session all summer, much depending on how serious the relations with Germany become as the weeks pass. Appropriation bills which failed to pass the recent congress included the army, sundry civil, general deficiency and military academy bulls carrying more than $500,000,000. General legislation urged by the president included an act to supplement the Adamson railway law, enlargement of the interstate commerce commission, conservation law, including a general dam and water power bills; the Webb bill to legalize joint foreign selling agencies, and a land-leasing bill.

PRESIDENT WILSON has ordered the arming of American merchant ships against Germany's unrestricted submarine warfare, notwithstanding the fact that congress adjourned a fortnight ago without having given him express authority so to do. The president was advised by his secretary of state and attorney general that this was within his power, so he took the necessary action to place guns and gunners aboard merchant ships bound for the submarine zone which Germany has outlined around England and along the coast of Europe. The state department's views of defensive armament, under the conditions, are that the mere appearance of a German submarine or its periscope near an American armed vessel would entitle the vessel to take all measures of protection on the presumption that the submarine's purpose was hostile. This was based on Germany's announcement that her submarines would attack without warning any belligerent or neutral merchantman encountered within the barred zone. When the vessels sail under the policy of armed neutrality they will do so with the full backing of the administration—expressed in the form of war risk insurance and naval guns and gunners. It has been made clear that in the background will be the entire resources of the United States—ready for action should Germany attack an American ship in violation of the warning of the American government.

DANGER of a nation-wide railroad strike, which would tie up practically all the traffic of the country, became imminent again last week. The four great railroad brotherhoods, representing the important branches of railroading, were practically unanimous for a strike unless the railroads at once granted their employes an eight-hour working day. This is virtually what the Adamson law would give if put in force. The original program of the men, the refusal of which resulted in the call last September of the strike, which was averted by the passage of the Adamson act included an eight-hour basic day, with time and a half for overtime. The Adamson law is now before the supreme court, with no time announced when a decision as to its constitutionality will be made public. The union heads admit they are hastening their plans either to obtain a settlement or to strike because they believe war with Germany "now seems probable." They contemplate accomplishing their purpose with or without force, before the opening of hostilities, when they would be obligated by their pledge to the president to cease any obstruction of transportation embarrassing to the national defense. They charge the railroads with playing for delay of settlement until war breaks out and ties the hands of the unions.

THAT Colombia should be paid $25,000,000 because of the secession of Panama, with the tacit consent if not the actual connivance of the United States, is the contention of President Wilson and various congressional supporters who are backing a bill to this effect. The senate foreign relations committee has reported in favor of the bill, but it is being bitterly opposed by the republicans, led by Senator Lodge, of Massachusetts, and Senator Borah, of Idaho. The bill as now before the senate differs from the one originally introduced, by reason of two important amendments. The first amendment contains an expression of regret from both the United States and Colombia over the friction which has existed between the two countries ever since the revolution of 1903, when the republic of Panama was created. As presented to the senate the treaty contained an apology from the United States to Colombia. The second amendment provides that nothing in the treaty shall be construed as casting any shadow of doubt on the title of the United States to the Panama canal. There is great difference of opinion as to whether President Roosevelt performed a great and statesmanlike act when he assisted Panama to gain its freedom and the canal to be built, under American domination, or whether Colombia was, indeed, despoiled of territory and the canal rights. The question is being threshed out, along partisan lines, in the senate.

CHINA is the only nation which has followed the lead of the United States and severed relations with Germany as a result of the unrestricted submarine warfare. The Chinese senate decided upon this action, last week, by a vote of 152 to thirty-seven. Similar action had already been taken by the lower house, so the government was authorized to hand the German minister his passports. There is no intimation that China is prepared as yet actually to join in the war against Germany, although diplomatic circles at Washington confirm Pekin dispatches saying the allies, led by Japan, are urging the Pekin government to declare war and exchange her large supplies of iron and other war materials for permission to increase her customs duties and postponement of her Boxer indemnities. China already has signified her intention of following the lead of the United States and it has been regarded as probable here that she would hold to that course.

ORGANIZED labor in America, through its representatives in conferences at Washington, offered its services to the country in every field of activity if, despite all endeavors and hopes, the United States should be drawn into war. The action was taken by unanimous vote of more than 150 delegates from national and international trade unions affiliated with the American Federation of Labor and five unaffiliated organizations, including the great railroad brotherhoods. In all about 3,000,000 American workers were represented in the conference called to determine and announce the part to be claimed by labor in the national preparedness plans.

ARE YOU GOING TO BUY LAND?

IF so, get a copy of our journal first. It has lands, city property and stocks of goods advertised in its columns from nearly every state, so that you can find just what you're looking for in its columns. Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F. Farm and Real Estate Journal, Traer, Iowa.

HOME FRUITS PAY

Make the home lot or acre more valuable—more profitable—by growing more fruit. Investment small—profit and pleasure great! We are actual growers—sell direct from nursery to you—no agents, no commissions, finest quality trees. Every tree, bush or shrub guaranteed to reach you in perfect growing condition. All leading varieties. We want more customers. Our prices get them—Our quality holds them. Exceptional offers to introduce our Northern grown cow-belt, state inspected nursery stock. Lowest wholesale prices. Get this

FREE 1917 PLANTING GUIDE

Lists, describes, prices—at wholesale—all leading varieties apples, plums, cherries, grapes, pears, peaches, bush fruits, roses, hardy ornamental shrubs and trees, evergreens and perennials. A berry-grower's book! An orchardist's manual! Printed in four colors. More wonderful than our 1916 book. A postal brings it to your home. Don't miss it. Write today.

The Curtis Form-a-Tractor

$350.00

A Tractor and Power Plant Combined

Does everything that a heavy tractor will do—at the draw bar or belt pulley—adapted to all soil and weather conditions—the most sensational farm machinery development for years.

Has the Pulling Power of 12 Autos

Your automobile engine utilized to revolve the two tractor wheels—no strain on working parts of car—auto axle merely turns pinion gears develop *twelve times the engine pulling power*—and *all the engine power for belt work.*

Cost No More than your Auto to Run

No more gasoline to run the Curtis-Form-a-Tractor than required for your auto. Starts on high and runs on high. Powerful fan prevents heating under most extreme working conditions. Guaranteed to give satisfaction in every detail—and to *outpull* any similar device of like power.

Does All Belt Work

Drive pulley for belt work included. Run the separator, sawrig, feed grinder, ensilage cutter, or any other heavy farm machinery. Get the full engine power at the belt pulley.

DO not let your boy go to the city where he is apt to become one of the thousands of poorly paid clerks. Keep him in the country and make him a successful and independent farmer, owning his own farm and sharing an interesting community life.

Montana is the place for him. Here are millions of acres of good farm land, reasonably cheap, waiting industrious men to turn them into wealth-producing areas.

A tangible expression of faith in Montana's future, is the Electrification, by the *"St. Paul Road"* of its main line across the state at a cost of $12,000,000. This gigantic enterprise has emblazoned Montana's development before the eyes of the world and is to play an important part in the future upbuilding of the state—developing new industries, broadening the farmer's market, increasing land values and generally improving living conditions.

Chicago, Milwaukee & St. Paul Railway

NOW is the time to investigate Montana's opportunities. Literature giving interesting facts and figures free on request to

FAMILY CIRCLE TALKS
BY THE PUBLISHER

WISCONSIN'S ADVANTAGE IN MARKETING.

I HAVE often said that there is no state in the Union which enjoys greater natural advantages of soil, climate, location, etc., than Wisconsin, and this fact was brought home to me with added force as I read Governor Philipp's speech, delivered at Eau Claire not long ago. In it he pointed out convincingly the strategic position which Wisconsin occupies with reference to the great markets of the Middle West.

Of course, all of us know, in a general way, that Wisconsin's shipping points are relatively close to Chicago, Minneapolis and Duluth, and that cheap water transportation is available for much of our farm produce, but we do not stop to analyze the real significance of these facts, as Governor Philipp has done. He has been, and still is, for that matter, a farmer, in addition to having his other large interests, and he knows the importance of cheap transportation to the farmer.

As an evidence of Wisconsin's advantage on the Chicago market, Governor Philipp pointed out in his speech that it costs $344 to ship a car of dairy products from Miles City, Montana, to Chicago, while from Marshfield, Wisconsin, to Chicago the cost is less than one-fifth as much, or $66. A car of sheep, whose freight from Montana points to Chicago is around $66, costs but $24 from central Wisconsin points, while a carload of cattle costs $117 as compared with only $38 from these respective locations to the great Chicago stock market.

But not only is there this tremendous advantage for Wisconsin farmers in rates, but also in the time necessary for the journey. For example, it takes six days to bring a carload of freight from Miles City, Montana, to Chicago, whereas from Spooner, Wisconsin, two days is sufficient for the trip. From a great many points in this state live stock that is shipped to Chicago today can be in the great stockyards there tomorrow morning. Every live stock raiser knows the advantage of quick trips and the extra money which it brings because of the animal's good condition. There is only a very limited area in the United States that enjoys such good opportunities in this respect as Wisconsin, and it is an advantage that is worth many thousands of dollars to the live stock shippers of the Badger state every year.

I am anxious that these facts be known, because it seems to me they have a very important bearing on the future development of the state, and especially of Upper Wisconsin. It is only additional evidence that there are better opportunities for building up new farms in this state than in distant states, far removed from the great central markets, which have attracted so many settlers that Upper Wisconsin should have received, both to its own and their advantage. Governor Philipp is right when he says that proximity to markets is one of the great factors in agricultural success and that Wisconsin is especially favored in this respect. It is a fact that I wish might be given wider publicity.

GIVING WISCONSIN FARMERS A VOICE.

THE farmers' institute, held at Delavan, Wisconsin, recently, proved that there really is something new under the sun, by including a feature on their program which I should have liked to hear. One evening of the meeting was devoted to talks by farmers on "The Needs of Delavan as We See Them."

I do not want to be misunderstood when I say that it has often seemed to me that we have too much of this thing of town folks telling the farmer what he ought to do, and too little opportunity for the farmer to express himself regarding the duties and obligations of the town dweller. Take almost any program, gotten up for the enlightenment or entertainment of the farmer by any community, and you will find speeches by secretaries of commercial clubs, by so-called "boosters," "organizers," "promoters," and the like, largely to the exclusion of the farmers' views.

Now, let me repeat that I do not want to be misunderstood in this matter, for no one appreciates more than I do the efforts which are being made to help the farmer by the town residents of Wisconsin, but I merely want to call attention to the fact that there are possibilities of service both ways. The farmer does not wear his feelings on his sleeve, nor go around with a chip on his shoulder, looking for an opportunity to take offense; but I think he must feel slighted at times, when he listens to half a dozen speeches by men whose connection with farming is confined to the fact that the prosperity of their business depends on the farmer's success, while the farmer has no representation on the program. Of course, such things are largely unintentional, but they represent an indifferent state of mind toward the farmer and his views that needs correcting.

I certainly would be the last to desire to create friction and jealousy between town and country. There is no real ground for such feeling. In the broader sense their interests are identical. Our farmers are running business enterprises today in which more capital is invested than in the average town business. The average farmer has a large amount of property on which to pay taxes, and, as a general proposition, he does not object to paying reasonable taxes where he gets value received, and he has a voice as to how the money is spent.

I have no sympathy whatever with the idea that the farmer is a "mossback" or "tightwad," and that it is necessary for his own good to force him into something or other to which he is opposed. There is no class of people, in my judgment, with whom the business affairs of the country can be more safely trusted than with the farmer. Excepting for the patriotic sacrifices of the men who till the soil, this country would never have been established nor preserved in an inseparable union. The farmers of the world today are a greater factor in making history than the fighters in the trenches or the sailors on dreadnaughts. Without the food which the farmers are producing, even 42-centimeter guns would lose their power and submarines their terror.

I believe that in many Wisconsin counties there is being developed a splendid spirit of coöperation between country and town, to the advantage of both. The county agricultural agent is a great help along this line. While there may be some prejudices against him in the beginning, when he once demonstrates that he really wants to work with and for the farmers along the best lines, he becomes a strong factor in the community and a bond of good fellowship between town and country.

So I congratulate the good people of Delavan and Walworth county on this evidence which they have afforded of the new spirit of harmonious action between the residents of town and country, by inviting the farmers to express their views on their mutual needs. I venture to say that what was said will prove of just as great benefit to Delavan as the balance of the program proved to the farmers. The average farmer makes no pretense at being an orator, but oratory is cheap compared with hard common sense, which has come as a result of experience, hard work and honest living; and that is exactly what the farmers of Wisconsin have to contribute to the solution of the mutual problems of country and town in our state. It is my hope that the example of the farmers' institute, at Delavan, may be followed elsewhere in this state, and the farmers be given a chance to make their contribution to the discussions of town as well as of country problems.

A FIREPLACE FOR THE WISCONSIN FARM HOME.

I HAVE noticed with pleasure the increasing interest which is being taken in improving Wisconsin farm homes, and I have been especially attracted by the plans for such homes which have been submitted to the experiment station, to which my attention has been directed.

It is a far cry from the humble Ohio home, where I spent the happy years of boyhood, to the modern farm homes of Wisconsin, and I am glad, indeed, that it is so, and that our sons and daughters are not obliged to endure the hardships which we older ones had to go through (though not realizing at the time that they were hardships) in the grain-belt farm homes of half a century ago.

I am glad that many farmers of today can substitute the convenient, modern bathtub for the old wooden tub; that they can have the luxury of hot and cold running water, instead of the old-fashioned pump by the back door, and that their homes are heated and lighted by hygienic systems, which add greatly to the attractiveness and comfort of the home and help to keep the young people contented in the family circle. I am attracted by the built-in bookcases, filled with the great literary classics of all time, which grace so many Wisconsin farm homes, though I well remember when I was a boy that the family Bible, Pilgrim's Progress, a weekly paper, and an occasional religious publication constituted our entire stock of reading matter. I repeat that I rejoice in all these evidences of good taste and prosperity, such as grace many Wisconsin farm homes of today, and I am anxious to encourage them where I can.

But there is one thing which, almost more than all others, I hope my readers will keep in mind as they come to plan new homes, and that is a fireplace. For some reason or other I just can't think of a real cheery, comfortable farm home without a big, open fireplace in the living room. I am not talking about the little new-fangled grates, such as are crowded into city apartments for lack of space; but I mean a great, big, open fireplace, large enough to take a log that will burn all day or all night—a fireplace with a capacious hearth and old-fashioned andirons. I cannot think of anything more conducive to comfort and happiness than the genial warmth and hospitable glow of such a big wood fire as it can provide on winter nights.

How I loved, in my boyhood, to hear the flames go crackling up the big-throated chimney, and to watch for the live coals which would occasionally pop out on the hearth, to the great danger of the rag carpet unless quickly gathered up! And then there were the evenings when we popped corn or parched field corn, or thawed apples over the glowing embers. I wonder how many of my readers have memories as tender as mine of the old-fashioned hearth fire.

Of course, such a fire is not adequate for heating purposes in a large home, nor is its heat even. I well remember nights when our family circle was enlarged by visits from neighbors, so that I was forced to get back from the fire into the second row, and I still recall vividly how cold it was there. So, I would not think of letting the fireplace take the place of the modern heating system, but I would have it for its sociability. Let us install practical and healthful heating plants and then add the cheeriness of the old-time fireplace. Here in Wisconsin we have plenty of good timber yet to burn, without having to ship in the back-logs, as they do in the prairie states, so that a fireplace is an economical, as well as an enjoyable, luxury.

If the parents are planning the new house, put in the fireplace as an added attraction for keeping the children at home nights, and if the young folks are doing the planning, let them add the fireplace for the sake of father and mother, who will enjoy it and in whose minds it will awaken tender memories of other days.

If the fireplaces of the old farm homes could speak, what stories they could tell of those who have sat and gazed into their dying embers. If the burning logs had the power to discern thoughts, they would have buried in their burning hearts many a tale of happiness and woe, of plenty and want, of strength and weariness, but, most of all, tales of final victory over nature and domestic happiness and contentment. Some of the greatest thoughts of mankind, some of the finest emotions of womanhood, have been inspired by the soothing and cheering atmosphere of the open grate fire. Shall we not retain this time-honored domestic institution in our Wisconsin farm homes as a source of comfort and inspiration for the younger generation?

A PATRIOTIC WISCONSIN WOMAN.

WITH the war clouds hovering ominously over our fair land, it is good, indeed, to find such patriotic sentiments so eloquently uttered as those which a good friend of The Wisconsin Farmer, May Gabriel, of Rice Lake, Wis., sends to me, as follows:

Dear Mr. Pierce: My sister and I received the slips of "America" you sent to my address. We were very much pleased to receive them and wish to thank you for them heartily. Our hopes are that this beautiful and noble song of "America," also that of "The Star Spangled Banner," may be sung as long as human tongues shall sing, that our country at peace may dwell, and that our Old Glory in the gentle breeze may wave, "o'er the land of the free, the home of the brave," for all eternity.

Shall we not all join in a hearty "Amen" to this? Are these not inspiring thoughts, splendidly expressed? It gives me the greatest pleasure imaginable to find among my correspondents so many noble women in whose breasts the fires of patriotism burn high. Our land is safe against invasion, against adversity, against any wrong or danger, so long as God is on our side and our women lead us into right paths and counsel us wisely.

James M. Pierce

The Wisconsin Farmer Madison, Wis.

Study of Wisconsin Farm Management Records.

The extent of good accomplishment by the teaching of agriculture and the education of our boys and girls in high schools and in the agricultural college is very well demonstrated by the records of Dean Otis, of the farm management department. For a good many years Mr. Otis has worked untiringly on the results which are now available regarding profits made on Wisconsin farms. The farm management work is gaining in popularity among the farmers of the state. Bigger classes are being formed in each of the communities where the work is now in progress. From the first, however, the averages from all farms have tended to show that bigger profits are made on such farms where the owner has taken advantage of the schools at his disposal. Herewith is a record of 825 farms in Wisconsin compiled very conscientiously and selected with the utmost care in order to avoid all unrepresentative averages. The record shows that of 478 farms where the owner has received only the common school education the labor income, that is, profit after all expenses plus interest are paid, is $632. For farmers who have had in addition a short course in agriculture the labor income is $739. Of 155 farmers who have had high school education the labor income is $893, and of the college men, in which average eighty-four farms were considered, the labor income is $1,056. Peculiarly the records show that beside making a larger labor income those with additional education have more invested in the house and conveniences about the house. Bath equipment, lighting system, furnace heat and autos are more common on such farms. As such people have more money invested in these conveniences they live better.

Not all education is beneficial. Not every farmer boy that goes to high school and college benefits himself or his farm by such education. There are exceptions to every rule. The result of the averages of Dean Otis, however, are an indication that, other things being equal, the man with a better knowledge of agriculture and the man better versed in business methods is more likely to make the most of his opportunities. It is getting harder to make the showing our forefathers did, who gained large fortunes through the increase in the price of land. Money that is being made today and that will be made in the future must come from the crops grown on the farm and fed to the live stock and marketed through cattle and hogs. While land prices will not go down, their increase will not be as rapid. Bigger profits from crops ne- [illegible] more economical marketing. [illegible] peration today must be [illegible] of thought and [illegible] can in a [illegible] the short courses [illegible] at the agricultural college. The time is soon at hand where a decision will have to be made as to whether the son is to stay at home or go to school. Figure now with giving him the opportunity which was not available many years ago. The boy will need his education in the years to come and if it is not given to him now it might be easily too late then. The figures below are worthy of more than a passing glance:

DOES EDUCATION PAY ON THE FARM?
(825 Wisconsin Farmers)

Education	Common School (478)	Short Course (108)	High School (155)	College (84)
Labor income	$ 632	$ 739	$ 893	$1,056
Residence (house) ...	1,764	1,837	1,939	2,558
Bath equipm't	21.9%	24.1%	27.2%	48.5%
Lighting system	17.0%	22.1%	20.5%	48.0%
Furnace heat	22.1%	29.7%	30.0%	47.0%
Auto	20.0%	23.6%	25.4%	29.1%

These figures are presented for the reason that we want to see all farm boys and girls have their best chance.

Advertising Wisconsin Farm Products.

Our attention has been called to a three-column advertisement of the Iowa County Order of the Wisconsin Experiment Association. This advertisement appears in the Dodgeville, Wisconsin, paper and is rather a unique departure from the regular work of the county associations. About sixty farmers are represented in the advertisement and they have listed their offerings of live stock, seed, poultry, etc. The offerings are placed in alphabetical order. It is interesting to note that one-third or more of the farmers who are included in this advertisement have selected names for their farms. Here are some of the names:

Spruce Lawn Farm	White Rock Hill Farm
Prairie Grove Farm	Maple Shade Stock Farm
Belleview Stock Farm	White Oak Stock Farm
Mount Pleasant Farm	Brookside Farm
Garrison Grove Stock Farm	Meadow View Farm
Sunny Brook Farm	Crystal Spring Farm
Big Spring Farm	Pine Knob Stock Farm
Ridgewood Farm	Glen Ellyn Farm
Carter's Poultry Farm	Oak Hill Farm
Willow Lane Stock Farm	Bunker Hill Stock Farm
Enterprise Farm	Roachdale Farm
Cottage Grove Farm	Evergreen Farm
Mount Hope Stock Farm	Rama Farm
Green Lawn Stock Farm	Pleasant View Stock Farm
Southern Slope Farm	

Every year the farmer is beginning to learn clearly the value of advertising. Those farmers of the Iowa county association who have surplus to sell to their neighbors have done well to club together and advertise their stuff in the local paper. We have no doubt this experiment association advertisement will be thoroughly read by the farmers of the county and that it will produce business for the members named.

There are extra profits in farming for the men who are willing to put in extra pains with their crops and raise good seed. There is not only a market for such seed in your own neighborhood but there is a larger market in the state at large and even outside of the state. The Wisconsin Farmer reaches 90,000 farm homes in Wisconsin and the contiguous territory in the states adjoining Wisconsin. If a farmer has sufficient seed or stock to sell it will pay him to advertise outside of his own county, and those who are making the most money are not only taking advantage of the opportunities for advertising offered by their home papers, but are endeavoring to enlarge their business by using a farm paper like The Wisconsin Farmer.

Advertising is a simple and economical method of finding buyers. Members of the Iowa County Experiment Association could find other means of advertising in their county, but we believe they have chosen the best and most economical method, in using their county paper. Each farmer might issue a circular, showing what he has to sell, and send this circular through the mails to every farmer in the county. The postage alone would cost many times what the advertisement in the local paper costs, and there would be the added cost of circulars, addressing, lists of names, etc. So, that the farmer with a few bushels of seed grain to sell can scarcely afford the circular method of advertising. He might put up billboards on several of the most conspicuous cross-road corners in the county, but by the time fifty or sixty farmers put up such boards, space would be at a premium. The cost for such advertising would be prohibitive, as the painting alone of a billboard would cost many times what an advertisement in the local paper, or even an advertisement in The Wisconsin Farmer would cost.

The farm name, we believe, is an economical form of advertising, and every man who owns his place should pick out an appropriate name, and have this name displayed conspicuously on a sign which can be seen from the road. It is effective advertising to hang out a sign such as "Seed Oats For Sale," or "Young Chicks For Sale," or other appropriate wording, especially if the farm is located on a well-traveled road. If the farm is on a road traveled to some extent by tourists, business may often be secured by a sign such as "Honey For Sale," or "Apples For Sale," or any wording which fits the case.

Experience has shown that advertising, properly done, will bring results. Look around you everywhere—the biggest business enterprises have been built up on advertising. The biggest live stock businesses in Wisconsin have ben built up by advertising. The farmers who have sold most seeds or most poultry have advertised. It is the cheapest and surest way to success.

WHERE PRODUCER AND CONSUMER BOTH LOSE.
Three Good Reasons for the High Cost of Living.

Wisconsin Legislature.

A bill introduced in the legislature adds to the powers of nursery inspection by the department of agriculture. All nurserymen, dealers or all other persons residing outside of the state and desiring to solicit orders for nursery stock for Wisconsin, must have a plainly attached label on the outside of the package or box which contains such nursery stock certifying that such nursery stock has been duly inspected. The bill gives the department of agriculture the power to stop shipment of any stock by any common carrier when the provisions of the bill have not been satisfied.

A bill introduced in the assembly provides for $7,500 for 1917 and 1918 for the discovery and eradication of the white pine blister rust until such a time when this evil has been eradicated. The white pine blister rust has done great damage in the forests of the east, but has comparatively weak footing in our Wisconsin forests. A step in the right direction at the proper time will save the state millions.

In order to aid the reclamation of the cut-over land, a bill has been introduced which makes it possible for fifteen owners of land in counties to file with the county clerk a petition requesting aid in obtaining funds for reclaiming land by drainage or removing from it stumps and any other objects which might prevent the efficient use of the land for agricultural purposes. The bill would give the county board power to direct a claim to the reclamation board for an investigation of the case and if necessary obtain for the petitioners the funds asked. No loan of less than $100 or more than $3,000 can under this bill be granted to any one person. All loans are payable in whole or in part at any time within a term of thirty years.

A number of bills now up before the legislature define the powers of the department of agriculture in a way which would make the department of agriculture the important factor in controlling disease in animals and in nursery stock. The duties of experimentation and education would not be classed under the department of agriculture, but remain with the college. There will be no duplication in this direction. Under the present system the weakness lies in the fact that the college men cannot well apply the police powers which any controlling power must exercise in order to have anything on a fair and equal basis. The stallion registration and examination of feeds and fertilizers will also come under the department of agriculture. The department can by this arrangement thus prepare for eventualities as in the outbreak of diseases among cattle or swine. They can mobilize forces in times like the present and have deputies, veterinarians, ready at an instant's notice to take such steps as are necessary in safeguarding herds of the state. These men would have the power to enforce their suggestions through the aid of the state and county officials. It would in many ways be superior to the present system where the duties of teaching allow for only a limited time for field work and either one or the other must be slighted in times of great trouble.

A Regular Feature.

With more important public questions confronting the nation today than at any time since the civil war, we believe that no farm paper in the United States has a more interesting, valuable or inspirational feature than the page of views which the publisher of The Wisconsin Farmer, Mr. James M. Pierce, writes every week. This page has been a regular feature of this paper for the past three years and will continue to be a regular feature throughout all of the coming year.

Readers of The Wisconsin Farmer, who have grown accustomed to reading Mr. Pierce's views on the important questions of the day (as they affect nation, state, family and individual) will be glad, indeed, to hear that The Wisconsin Farmer guarantees this to be a regular weekly feature. Subscribers who do not wish

to miss a single issue or a single article of Mr. Pierce's should see to the important matter of their subscription renewal without delay. If you will send a check for your next year's subscription, and will secure at least one new subscriber to The Wisconsin Farmer, we shall be enabled to put our plans for a still better paper into working operation without delay, and the many good features of The Wisconsin Farmer will be continued and added to, as the weeks pass. Attend to your subscription renewal without delay; secure at least one new subscriber and see to it that neither yourself, your relatives or your friends miss a single copy of The Wisconsin Farmer throughout the coming year.

Demand For Wisconsin Cattle.

With a pure-bred sire at the head of each, fifteen carloads of Holsteins and two of Guernsey heifers, grade and pure bred, started south from Wisconsin last week for Missouri. Mr. E. J. Bennett, dairy commissioner of Missouri, was commissioned to purchase these cattle by the farmers and bankers of his state for the use in starting calf clubs among the boys and girls of the "show me" state. Under the plan the children have a calf one year and at the end of the season hold a sale. This greatly encourages young people to develop a liking for the dairy game and by the use of pure-bred sires upon grade animals satisfaction from breeding pure-bred stock is assured. The northern sections and even the Ozarks of Missouri are being populated with better dairy cattle. Wisconsin was selected as the best state to get first-class heifer calves for such work. In a way this is a loss to Wisconsin to have the heifer calves going out of the state, as there is much room for development of our many general-purpose farms into greater dairy-producing centers. The cattle were gathered up through the efforts of the Wisconsin Live Stock Breeders' Association, agricultural extension department and through county representatives. The demand for pure-bred and high-grade cattle from Wisconsin is getting larger each year. Overproduction seems a far-away impossibility from present indications. Breeding for better stock will pay handsomely during the next ten years. The great Southwest has not begun to stock its plains with first-class cattle, which it must find in the great dairy states of the central West, of which Wisconsin is the leader.

A Badger Farmer Makes a Few Inquiries.

The Wisconsin Farmer is in receipt of the following questions from R. G. Stirn, Cochrane, Wisconsin, breeder of thoroughbred Poland Chinas and pedigreed Jerseys:

What are the qualifications of a county agent?
What is the salary of a county agent? Are good ones hard to get?
Who pays their salary—those who want the county agent or all the taxpayers in the county?
What are the main objections or main benefits of having a county agent?
Wouldn't farm papers like The Wisconsin Farmer, if properly read and followed, be as good as a county agent?

In answer to the first question a county agent should be a man who has had practical experience in farming and in addition he should have enough of the qualifications of a student and teacher to enable him to interpret and impart to others the results of experiments and research work conducted by the various agencies now endeavoring to promote better agriculture.

County agents receive from $2,000 to $5,000 per year, depending upon their experience. If they prove valuable to the county the salary is usually raised some every year.

Good county agents are hard to secure for the reason that it is difficult to get men who properly combine practical knowledge and scientific knowledge.

The government will pay $1,200 per year toward a county agent. The balance in Wisconsin may be paid by the county or by private subscriptions from farmers or business men. The state offers a limited appropriation for this work and supervises the work in counties where any state aid is given. Confer with E. H. Luther, superintendent of county agents, Madison, Wisconsin.

The chief objections which have been raised against the county agent system are the expenses and the difficulty in getting good men. Some counties have been slow to adopt the system and in some instances farmers have bitterly opposed it. However, in most instances where the county-agent system has been adopted and where a good man has been secured the people have favored it after having given it a trial.

We appreciate your implied good words concerning The Wisconsin Farmer. There is so much that might be done to make farming more profitable that The Wisconsin Farmer cannot claim to have a corner on every agency which might be employed. We believe that good farm papers have been largely responsible for bettering of farm conditions and for increasing farm profits. There is scarcely a week goes by when we do not send out sample copies to county agents who have seen some practical article in The Wisconsin Farmer and who desire that farmers in their county read this article and profit by it. County agents use farm papers as a source of information. They also use state and government bulletins. The real advantage of the county agent is that he may bring to the attention of farmers any number of important facts and experiences which the farmers might otherwise miss.

It is our belief that a good county agent in any county is worth many times what he costs.

Our best breeders of beef cattle are paying more attention to the milking qualities of their cows today than ever before, as it is well known that good beef form and fair dairy production go hand in hand. A little sanity is needed by some of those who emphasize the dual-purpose quality because the tendency is to simply make another breed of dairy cattle by carrying the development of the dairy characteristics too far. At the last International Exposition all the aged cows in the Short-horn class had calves by their sides and it was a glorious sight to see the big, lusty fellows in the ring.

Touring Car $845 *Roadster $845*

Sedan, $1,275
(At the Factory)

The DIXIE Flyer

EACH year sees an increasing number of automobile buyers who seek not only *Performance* in their car but *Comfort* and *Convenience*.

You, for example, enjoy leaning back against the cushions of your car and delight in feeling them give comfortably under you when you strike a "thank you ma'am" or bit of unimproved road.

You want springs that will absorb the jar and not make you bump the tonneau top. Whether over rough roads or along the boulevard, a Dixie Flyer is an easy rider.

Similarly, with every other feature, there is a point at which satisfactory car comfort and reasonable price come closest together.

That point is the *ideal* we build into every Dixie Flyer.

How convincingly we have attained that goal is shown by a most satisfactory increase in sales each season—secured, not by spending hundreds of thousands in advertising, but by word of mouth from satisfied owners to their friends.

See the Dixie Flyer at your nearest dealers. Drive it—feel its instantly responsive power, its quick pick-up and get-away into speed, its smooth riding comfort, and you will understand more readily why this is so.

Our new illustrated catalog describes this matchless car in detail. You may have a copy for the asking.

When Wu Ting Fang, former Chinese Minister to the United States, took his first ride in the New York subway, he watched with oriental interest, the crowds as they rushed out of one train, crossed the platform and crowded into another.

"What are they doing?" asked the observant Mr. Wu.

"Changing from the local to the express," said his informant.

"Why?"

"Because the express gets them down town two or three minutes sooner," was the reply.

"*But what,*" insisted the practical Wu, "*are they going to do with those two or three minutes?*"

"Pick-up" and excessive speed are popular claims made for cars nowadays. There are some cars which will pick up, to say, 45 miles in two or three seconds less than the Dixie Flyer; but unless you are trying to break the law or to get away from the police *what are you going to do with those two or three seconds?*

The Dixie Flyer has all the speed of "pick-up" and "get-away" necessary to satisfy any law-abiding, high-speed-loving driver, and enough of smartness, style and quiet elegance to drive in any company.

More Work Quicker—Better Work Cheaper

For your Spring farm work, you want a light, dependable tractor for YOUR use. A tractor designed, developed and produced for work on the average American farm—YOUR farm.

The close coupled feature of the TRACFORD is among its strongest points. By reason of the location of the dead axle in advance of the Ford axle and draw bar, the TRACFORD is the only Ford plowing attachment which is able to utilize the weight of the driver and all of the car forward of the axle to produce traction. That is why the TRACFORD has so much draw bar pull. LOOK INTO THIS!

That is the idea back of the great tractor development of the year—the new

Crate-Feeding Poultry For Market

Pertinent Remarks on Selection of Stock and Feeding.---By F. E. Mussehl, of the Wisconsin Experiment Station.

THE quality of market poultry can be much improved and the weight considerably increased by proper feeding for a few days before marketing. A hundred pounds of poultry sells for more than a hundred pounds of any other kind of live stock commonly used for meat production. Three hundred and fifty pounds of the right kind of mash feed, moistened with buttermilk or skim milk and fed in the right way to the right kind of feeding stock, will produce a hundred pounds of poultry meat.

Growing the frame is the most expensive part of poultry raising, but finishing the birds by special feeding for a short time before marketing is highly profitable. A gain of 35 per cent over the original weight for fifteen days' feeding is not unusual with the right kind of feeding stock. The improvement in quality as well as the increase in quantity cannot be overemphasized. Prime milk-fed broilers and springs are a rare delicacy and need only be tried to be fully appreciated. The flesh of a properly fattened market fowl is more palatable and digestible than that of a lean fowl, because the fat of the former takes the place of the water in the tissues of the latter. When the flesh of the fattened fowl is roasted the fat melts and softens the tissues, while in the lean bird the water evaporates and leaves the flesh dry and hard.

Fattening may occur at any age, but young, growing stock uses its feed for both growth and fattening and so will make greater gains per pound of feed given than fully matured stock. The highest percentage gains can be secured with young stock about broiler size, weighing from one and one-half to two and one-half pounds each, although springs weighing from two and one-half to four and one-half pounds can also be very profitably fattened, and hens will make good gains for a shorter feeding period. Vigor and vitality of the feeding stock is as important in poultry feeding as in other live stock feeding and the most vigorous birds in the crate will get the most feed and make greater gains than their more timid neighbors. Crate feeding is really a kind of force feeding, for the birds cram themselves with unusually large amounts of a very palatable feed. Unless the birds are endowed with good vigor and vitality they will not be able to digest and assimilate large amounts of feed in a short time and will consequently make smaller and more expensive gains. An observation of the relative gains of two birds in a crate, one of the weak, crow-headed type and another of the strong, bold and vigorous type, will convince anyone that the matter of vigor is of great importance for profitable feeding. In fact, vigorous stock should be the first consideration in the selection of birds for the breeding pens, the laying flocks or the feeding crate.

One of the problems in fattening is to keep the birds quiet, thus conserving the energy otherwise expended in moving about. For this reason the birds should be confined to a crate or battery. A very satisfactory feeding crate may be easily made of two-inch by two-inch lumber for a frame, two-inch mesh poultry netting for the top, back and ends, and lath for the front and bottom. A crate for ten springs or eight hens should be about twenty-four inches deep, thirty-six inches long and sixteen inches high. The lath for the bottom should be placed about one and one-half inches apart so that the droppings will fall through to the ground below. A lath bottom is preferred to a wire bottom because the birds can stand on it more comfortably. The front of the crate should be made of lath placed about two inches apart so that the birds can eat the buttermilk-moistened mash from a trough placed along the front. A V-shaped trough may be made of half-inch lumber. The feeding crate should be placed in an open shed during warm weather, but during cold weather it will be more profitable to put the crate or battery in a room in which the temperature is above freezing most of the time. This crate may be used as a broody hen coop when it is not being used for crate feeding.

When rather large numbers of birds are to be fattened and where space is an important consideration, as it is with grocers, market and produce men who wish to fatten stock for their own trade, the regulation type of portable feeding battery as used in most commercial feeding stations may well be used.

The ration for feeding stock should

HOMEMADE FEEDING CRATE.
Satisfactory crate for confining birds during the fattening period.

A POOR FEEDER.
Long, crow-headed birds do not make satisfactory gains in the feeding crate.

A GOOD FEEDER.
This bird made a gain of 40 per cent in fifteen days' feeding. The bright eye, strong beak, and well-proportioned head are indications of great vigor.

consist altogether of mash feed moistened to a mortarlike consistency with buttermilk, or if buttermilk is not available, with skim milk. A very satisfactory ration may be made as follows:

Sixty per cent finely ground corn meal.
Forty per cent red dog flour.

If red dog flour is not easily available, a good grade of white middlings may be used. Another good ration may be made of:

Fifty per cent finely-ground corn meal.
Thirty per cent oatmeal or sifted ground oats.
Twenty per cent middlings.

Moistening the ration with buttermilk to a mortarlike consistency results in a very palatable and highly digestible feed. The proteins of milk are known to be particularly efficient for growing chickens. Approximately two pounds of buttermilk will be needed for each pound of dry feed to give it the right consistency. During the warm weather the feed should be mixed somewhat thinner than during cooler weather.

Care should be taken not to overfeed the first two days. The first few feeds should be rather light, gradually increasing until on the third day and after the birds may be given all they will eat in twenty minutes, morning, noon and night. Any surplus feed should be taken out of the trough at the end of each feeding period so the birds will be "up and coming" for the next feed. The skillful feeder soon learns to stop feeding just before the birds have had the last mouthful which they desire.

The feeding period is usually ten to fifteen days. Old stock rarely makes profitable gains after ten days, but good, vigorous young stock will make profitable gains up to the fifteenth day of feeding.

While the suggestions in this circular have been made particularly for the poultry producer who wishes to finish his surplus stock for home use or for a special local market, still it is not out of place to suggest that there are many communities in this state which offer splendid opportunities for the starting of a commercial milk-feeding plant, particularly those communities where buttermilk is readily obtainable as a creamery by-product. The fact that so much market stock leaves the producer in any unfinished condition has led to the development of a specialized milk-feeding industry in many communities in the middle West. In these milk-feeding plants the stock is not only properly fattened but is also dressed, graded and packed, usually in a most creditable manner. The milk-feeding establishment is one of the few lines of the poultry industry in which intensive factory methods have been successfully employed. The success of the milk-feeding plants is partly due to the fact that the managers have learned the lessons of cleanliness, sanitation and ventilation better than the average poultryman and farmer. Most of the feeding stations are well lighted, splendidly ventilated and constructed so that they can be thoroughly cleaned and disinfected at regular intervals.

Grocers and market operators, too, who dress out the stock which they retail will find that the improvement in quality effected by milk feeding will make their stock more popular, while the profit due to increased weight is not to be overlooked. Creamery managers can make very profitable use of the buttermilk which is available as a by-product by operating a small milk-feeding plant in connection with their creamery. By crate feeding a saving of space, equipment, labor and feed is made over any other method of fattening. The rapid development of this branch of the poultry industry in some sections of the middle West is proof of the profits which are possible if good business judgment is exercised.

Use Straw For Growing Potatoes.

To the Editor:—I have tested the merits of old straw in growing Irish potatoes in two ways, and find it valuable. It is hardly practical to employ straw for extended crops, because it would take too much of it. But for small areas or a family patch of potatoes anyone having some straw can very profitably employ it.

The first plan of using straw is as follows: Plow, harrow and mellow the ground when spring opens. Furrow it out lightly in rows a foot and a half apart. Cut the seed to one eye and drop one piece in a place and one foot from each other. Cover only a couple of inches deep. Then immediately cover the whole surface with four or five inches of straw. The straw keeps the ground moist, keeps down all weeds and the crop requires no cultivation. When the Colorado bugs start their ravages, spray with Paris green lightly as often as necessary. Large, splendid potatoes are grown and are easily dug as soon as the tops die down.

The second plan of using straw for potato growing is to employ it as a mulch between the rows as soon as the cultivation ceases. Any old or even half-rotted straw is all right. Spread it from three to five inches thick around the hills and between the rows. The advantages are the moisture is conserved and no weeds or grass can grow.

The first plan is especially good for the early potatoes; the second is all right for either the early or the late crop. Both, I find, on a small scale, are splendid for growing large, fine potatoes. W. A. G.

One of our subscribers who went to the expense of having a beautiful sign painted, giving the name of his farm, complains that this sign was completely demolished by mischievous youths. So far as he knows he does not have an enemy in his neighborhood. He cannot understand why boys cannot be taught to respect the value of all property. In this he is right. It is a commendable thing to name the farm and especially so to work out the matter in detail and have a sign suspended so that every passerby may be impressed with what might be called the personality of the farm. This paper denounces in the strongest possible terms at its command this form of hoodlumism.

$1150 F. o. b. Racine
Mitchell Junior—a 40 h. p. Six
120-inch Wheelbase

Mitchell SIXES

$1460 F. o. b. Racine
7-Passenger—48 Horsepower
127-inch Wheelbase

Now an $1150 Six

Much Like the Larger Mitchell

John W. Bate believes that efficiency requires two sizes in Mitchells.

A seven-passenger car, to be roomy, must measure 127 inches from hub to hub. And 48 horsepower is the proper power.

But a 5-passenger car will be just as roomy with a 120-inch wheelbase. And a 40-horsepower motor gives it power enough.

So, to meet both conditions, we this year build a Mitchell and a Mitchell Junior. You don't need to pay for room or power not wanted.

Every Penny Counts

The Mitchell advantages lie in making every penny count. John W. Bate, the great efficiency expert, has spent years here to attain that.

He designed this whole 45-acre plant to build Mitchell cars economically. He equipped it with thousands of special machines. Every part is built here at the lowest factory cost. On this year's output his methods will save us at least $4,000,000.

There is no other factory like this building high-grade cars.

Hundreds of Extras

You see the result in hundreds of extras—all paid for by factory savings.

There are 31 features—like a power tire pump—which are practically unique to the Mitchell.

We have doubled our margins of safety. This year every vital part has 100 per cent overstrength.

Over 440 parts are built of toughened steel. Many parts are oversize. Many are built of costly Chrome-Vanadium.

In luxury and beauty the Mitchell excels any other car in its class. The finish coats are fixed by heat, to give a deep, enduring lustre. A rare-grade leather is employed. This year we have added 24 per cent to the cost of these items alone.

See What Men Miss

See what men miss who buy cars without these extra features. See the 31 attractions, most of which are found in Mitchells only. See what luxurious bodies we can give you at these prices, because of our own body plant.

Then consider the value of this double-strength. It means a lifetime car.

See what it means in the Bate cantilever springs. In two years of use, on thousands of cars, not one of these springs has broken.

Those are the reasons why men are choosing Mitchells in such an ever-increasing way. This year our output is increased 2½ times over. Men don't want to miss these extras.

If you don't know the nearest Mitchell dealer, ask us for his name.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

TWO SIZES

Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase. A high-speed, economical, 48-horsepower motor. Disappearing extra seats and 31 extra features included.
Price $1460, f. o. b. Racine

Mitchell Junior—a 5-passenger Six on similar lines, with 120-inch wheelbase. A 40-horsepower motor—¼-inch smaller bore than larger Mitchell.
Price $1150, f. o. b. Racine

Also all styles of enclosed and convertible bodies. Also demountable tops.

THESE TWO FREE BOOKS MEAN BIGGER CROP PROFITS FOR YOU!

My Famous Book "A Streak of Gold" and Galloway's 1917 Catalog

Ask For Them Today! A Postal Gets Both!

SAVE $25 TO $50 ON A MANURE SPREADER

My book "A Streak of Gold" tells how to get the most out of the manure crop with the least labor. My 1917 catalog tells how a run-out unproductive farm was turned into a gold mine crop producer. How to increase your corn crop from 15 to 25 bu. per acre. How a Galloway spreader will pay for itself in one year by increasing crop profits and leave money to put in the bank besides! How and why I save you $25 to $50 on a spreader by selling direct.

TURN THE MANURE CROP INTO CASH AT HARVEST!

Do it with a Galloway 1917 model No. 8 spreader. Spreading now means bigger crops this fall!

Prices never better! The producer is having his inning! Now is the time to get that big manure pile OUT ON THE LAND because every load means CASH IN THE BANK next fall for farm improvements, pleasures or other things you want. Get your manure crop out on the corn land--top dress the winter wheat! Get it on the soil where you are going to sow oats! Top dress the meadows--the alfalfa--the clover! A Galloway spreader used steadily for one or two weeks means that it will PAY FOR ITSELF because its use represents MONEY AT HARVEST time you otherwise would not get. Quit spreading by hand or using out of date spreaders when you can buy the best spreader on earth--the Galloway 1917 model Low Down No. 8 No. 5, or No. 1A and SAVE FROM $25 TO $50 over prices usually paid for spreaders not as good--not as down to date in design--not as light in draft--made of as fine materials, nor covered by the eleven Galloway spreader patents found exclusively on the Galloway.

GALLOWAY'S NO. 8 LOW DOWN SPREADER

Is the crowning achievement of my spreader manufacturing career! Now built stronger than ever. The new Galloway wide-spreading V-shaped rake on every machine. DO NOT CONFUSE Galloway spreaders with low priced machines that do not have the special EXCLUSIVE PATENTED FEATURES and genuine merit (backed up by tens of thousands of Galloway spreader users). Beware of cheap, absolutely worthless imitations of the genuine Galloway at any price. DON'T BUY A SPREADER OF ANY MAKE OR KIND until you have tried a genuine Galloway 1917 model No. 8, No. 5 or No. 1A at our risk WITHOUT OBLIGATING YOURSELF in any way!

30 DAYS' FIELD TRIAL

Test Galloway spreaders on your own farm in your own way and take your own time! They are returnable to us within one year if they do not come up to every claim we make for them! I will pay freight both ways. A Galloway spreader must sell itself to you. You are the judge. Spreaders shipped from Waterloo, St. Paul, Kansas City, Chicago or Council Bluffs—whichever is nearest your station, more convenient to you.

BACKED BY A $25,000 BOND

I have deposited in the Black Hawk National Bank of Waterloo a legally executed $25,000 bond to guarantee that I will live up to every agreement and STAND BEHIND EVERY CLAIM I make for Galloway manure spreaders, cream separators, gasoline engines, etc. You have nothing to lose and everything to gain when you deal with Galloway. I manufacture these spreaders in my own great chain of factories right here in Waterloo. Come and see me any time. You are welcome and I will be glad to show you how Galloway divides the melon and ships direct from factory to farm.

8-31

WORTH $50 MORE THAN ANY OTHER SPREADER

Remember this spreader is low down—only 42 in. high to center of box. Easy to load. Lightest draft spreader of its capacity built. Two horses handle Galloway spreaders anywhere. The Galloway wide-spreading V-rake, worth $15 extra on any spreader—costs you nothing extra on the Galloway. The invincible, irresistible, patented roller feed—an exclusive Galloway feature—the secret of its light draft, alone worth $25 extra on any spreader—exclusive again on the Galloway—costs you nothing extra. Patented Automatic stop, Uniform Clean Out Push-Board—worth $10 extra on any spreader—exclusive on the Galloway—costs you nothing extra. These are only a few of the special features you will find on the Galloway which are protected by Galloway patents. Don't buy a spreader of any make or kind until you have tried a genuine Galloway 1917 model No. 8, No. 5 or No. 1A at our risk without obligating yourself in any way. Try it in your field for thirty days and return to me within one year if not perfectly satisfactory. Remember we manufacture in our own factories and sell direct from factory to farm.

Notice These Exclusive Features

(A) Angle steel endless apron running over solid bottom. Adjustable from 6 to 24 loads per acre. (B) Our patented automatic stop, uniform clean out push-board--worth $10 extra on any spreader. Exclusive on the Galloway--costs you nothing extra.

(C) Feed lever. Adjustable to any number of loads per acre. Convenient, handy--above the load.

(D) Gear lever. Throws both sides of beater into gear simultaneously. Sprockets on both rear wheels. Remember double chain drive. No twisted beater, broken beater shafts. Gearing equipped with differential. Power continuously applied to beater shaft.

Read about these and other Galloway exclusive spreader features in my new big 1917 book.

INDISPUTABLE PROOF: I saved $29 by ordering a Galloway. I know it is a better spreader than I could have bought here for $125.--Geo. A. Krallik, Okla. City, Okla. I consider it equal to a prominent machine sold for $140. One neighbor who has used both says he would rather have the Galloway.--W. O. Cracraft Eckley, Colorado. There are six Galloway spreaders in my neighborhood. They tried my spreader first. All are more than pleased. Have had no repairs in seven years.--Edw. Semmelroth, Tekonsha, Mich. I saved $39. Believe I got a better spreader than was offered me here for $135.--A. T. Miller, Orella, Nebraska.

Wm. Galloway, Pres., Wm. Galloway Co. 39 Galloway Station Waterloo, Iowa

Get My New Concrete Mixer Offer

I want ten men in every county right now to accept my special co-operative offer. It will help you obtain a Sheldon Batch Mixer at little or no cost. Let me tell you about it.

You probably need a mixer for concreting on your place—most farmers do. The Sheldon is the ideal mixer for the farm. Light and easily portable, durable, low-priced. You'll find it will prove a mighty good investment. Write for special offer.

Sheldon Batch Mixers $11.50 Up

MAKE BIG MONEY Concreting In Your Section.

Can earn $8 to $20 a day with a Sheldon Batch Mixer. Our [illegible] now. The jobs go to the man with a Sheldon Mixer every [illegible], according to size of job. Or, if you buy a machine for [illegible] many times its cost in a season by renting it to neighbors.

For Farm [illegible] troughs, floors, [illegible] out of concrete. Batch Mixer. Will [illegible] small jobs. Beats hand mixing a mile. And it's a lot cheaper too. Takes the backache out of concrete. Makes possible those many small improvements on the farm that you wouldn't do without. Improvements which will add many dollars to the value of your land.

Get My FREE Catalog Tells how to build your own mixer by using the Free Plans which we send with our iron parts. Also shows full line of built-up machines. Two styles, hand and power. Will mix 2 1/2 cu. ft. a minute. Keeps 1 to 6 men busy. Chain drive, self tilting dump, all parts guaranteed. Write today for catalog and special offer. Geo. C. Sheldon, Pres.

Build Your Own Concrete Mixer—FREE PLANS

Good Pointers For Farmers.

A Great Many Important Facts Brought Out by the Banker-Farmer Conference Which Was Held at Madison Last Week

"THE Unbeatable Combination," the farmer and banker combination, lived up to its reputation at the meeting March 13th and 14th at Madison. This was the second excursion under the direction of the Wisconsin Bankers' Association and, though the attendance was only slightly larger than last year, the 600 delegates used every minute of the two-day convention to learn about each other and each other's business. Extremely heavy snowfall caused many who had signed to come to change their plans at the last minute. Many of the delegates went to considerable trouble to reach Madison in time. Mosinee sent seventy-five men and picked up along its route other delegates from the Wisconsin river valley. North Lake sent a special train with ninety men on board. The speakers on the program were of the best and their talks to the point. There was no wearying of the hearers by extended addresses, as each speaker kept strictly to the vital point of his subject.

A feature of the convention was the horse show given on the evening of the first day. Some of Wisconsin's finest horses were on exhibition here and any admirer of horseflesh could not help but enjoy the perfect examples shown in the various classes. There were roadsters and carriage horses and heavy harness horses, single drivers; heavy harness horses, four-in-hand, saddle horses of three and five gaits and light and heavy drafters. An outstanding exhibit was that of the Pabst Stock Farm, of Oconomowoc, which entered in the heavy harness horse classes and the three-gaited and high-jumping classes.

The performance opened with an exhibit from the college herds of Ayrshires, Guernseys, Jerseys and Holsteins and breeding herds of Angus and Short-horn cattle. Then followed the review and judging of the various classes of horses.

On the first day the morning was taken up by addresses and discussions on the horse and the control and eradication of oat smut, potato scab and other plant diseases. In the afternoon illustrated lectures on alfalfa and live stock were given. J. R. Wheeler, president of the Wisconsin Bankers' Association, opened the morning session by a short address on the purpose of the meeting. Mr. Wheeler stated that a big object was to learn the concrete purpose of things that are being taught at the university in agriculture. Thousands of dollars of the taxpayers' money is being spent each year, according to Mr. Wheeler, and it ought to be of interest to farmers to know how the best use can be made of the institution at their disposal. He encouraged a closer relationship between the farmers and the bankers, as he saw no reason why the farmer should feel the least hesitancy in going to the banker with his troubles. While Mr. Wheeler does not believe that the present high prices will prevail, prosperity is nevertheless going to continue. By getting ready for a readjustment of prices it will be possible to produce at less cost greater yields. When five acres can be made to produce the same number of bushels or the same tonnage as twenty-five we will have effected something in this direction.

Dr. Alexander followed this by a talk and demonstration on the points of the horse. The doctor opened up by saying that the horse will continue to be of use in spite of all advances agriculture can make in power farming. Beauty in a horse, he says, is synonymous with utility. The beautiful horse is the one that is sound and useful. When a horse has big, sound, well-textured feet and is low set, blocky and powerful it is useful and, therefore, a beautiful animal. With the horse it is possible to breed for standard types. This can be done only by keeping out the scrub and unpopular breeds through stallion regulation. Wisconsin today has 1,814 pure-bred stallions registered. There are 922 grade stallions used in the state and 317 mongrel or scrub stallions. The pure-bred stallion can only beget the grade stallion. The grade can only beget the scrub and the scrub can only beget scrubs. Discouraging the poor sire is a big step towards improvement. The Percheron seems to be the popular breed in our state. More than 1,000 stallions of this breed are registered of the 1,814 pure breds on the books. Doctor Alexander referred to the district of LaPerche, in France, and the home of the Clydesdale, in Scotland, as two splendid examples of district breeding. Fifteen to twenty years of rigid inspection in one community and breeding for one type of animal would make such a community famous for its horses throughout the United States. A record return of $175,000 is known from one sire of Clydesdales. The doctor took a shot at the guarantee system in this country. Over in Scotland many men are willing to travel great distances and pay $100 for a service with no guarantee of even a foal. The pure bred or any other stallion cannot be expected to guarantee a foal to stand and suck. Feed and proper care will do more to bring this about and is of more importance than commonly supposed. Over 25 per cent of colts die shortly after birth through navel infection. Feeding the foal is also vital. In France equal parts of oats and bran are at the disposal of the colt from early youth. The Wisconsin stallion law has been very satisfactory, and where 68 per cent of all stallions were scrubs when the law went into effect, more than 52 per cent are now pure bred. Twenty-two states have copied the Wisconsin law. The college showed some excellent examples of Percheron and Clydesdale, the good points of each being demonstrated by Prof. J. G. Fuller.

The control of oat smut and potato scab and other plant diseases was explained by Prof. R. E. Vaughn. Oat smut is an old topic to Wisconsin farmers, and very few farmers do not use the formaldehyde treatment for their seed oats. One pint or one pound of this mixture to thirty gallons of water is the mixture advised. A machine that has been invented which turns the oats through the solution into a sack ready for seeding was also shown. Potato scab and black scurf of potatoes have been warned against in a recent bulletin by the college. Formaldehyde again plays an important part. Soaking the potatoes for two hours in the solution will guarantee the scab eradication. For the scurf, four ounces of corrosive sublimate dissolved in hot water and added to nine gallons of water will form a proper mixture for effective treatment. Cabbage seed is also benefited by a formaldehyde treatment to prevent black rot and black leg diseases. One ounce of the formaldehyde to two gallons of water is the mixture in which the cabbage seed is soaked for twenty minutes and then dried on paper. Ten to fifteen pounds of seed can easily be treated with this amount. White pine blister rust, for which the legislature has considered a bill, and various other diseases of common plants were likewise mentioned.

During the noon hour a luncheon was provided for the delegates in the stock pavilion, following which the college barns and herds were thrown open to the visitors. The afternoon session was presided over by H. J. Maxwell, of Princeton, a member of the Bankers' Agricultural Committee. Professor Moore, in his interesting way, gave an excellent talk on the progress alfalfa has made in the state and the opportunities for this crop in Wisconsin's agriculture. A three-reel picture of the alfalfa plant from its seeding to feeding was shown and explained by Prof. L. A. Graber, better known as "Alfalfa" Graber, who directed the filming. The pictures were taken on the farms of Ex-Governor Hoard and the Swartz Bros.' Cornfalfa Farms, in Waukesha county. During this lecture the value of alfalfa was shown in a definite manner by comparing it with timothy, clover and Brome grass. Respective yields, as shown by experiments of each crop for one acre, have run as follows: Alfalfa, 5.4 tons; timothy, 2.5 tons; clover, 2.5 tons; brome grass, 1.33

tons. The difference in yield is greatly to the advantage of alfalfa, but is insignificant to the advantage in protein content held by alfalfa. One acre of alfalfa contains 1,996 pounds of protein, against 224 pounds of timothy, 661 pounds for clover, and 158 for brome grass. This would make alfalfa equal to twelve acres of brome grass in protein content, and nine acres of timothy. Besides this, alfalfa has a more beneficial effect on the soil than the other crops. The picture brought out the benefits of the proper time of seeding. Early June and as late as July 15th will bring good results with alfalfa, while later seeding dates are uncertain. Only where the alfalfa is established should it be sown with a nurse crop of one bushel of barley per acre, or with oats. The oats should be cut for hay.

In the discussions that followed the talk and pictures on alfalfa, great interest was evinced by both farmers and bankers. Five or six men would be asking questions at one time, and every question had a well-founded purpose. The advance of alfalfa will be rapid in the next few years. Eighteen years ago there were not eighteen acres of alfalfa in the state. Today there are 50,000. But there are still too many farms growing timothy, according to Mr. Moore. More than 700,000 acres of Wisconsin land is still devoted to this comparatively unprofitable crop each year.

Following the lecture on alfalfa, a picture was shown which has been fathered by the Wisconsin Live Stock Breeders' Association and shows the process of beef production from "pasture to plate." Other pictures showing cuts of meat and the production of ham and its preparation in the packing house were likewise shown.

In the evening the horse show in the stock pavilion was attended by delegates and students. Nearly 2,000 visitors were present. The university band furnished an excellent musical program during the entire evening. Wisconsin is fortunate in having a stock pavilion which can accommodate nearly 3,000 people and still leave room for exhibition purposes. The heavy harness horses, shown by Mr. Pabst and driven by him in pairs and four-in-hand, made the biggest hit with the crowd, as did also the jumping performances in which Mr. Pabst further demonstrated his horsemanship.

One Wednesday morning the opening remarks were made by J. B. Bartlett, secretary of the bankers' association, who touched on the advantages of a closer coöperation. Mr. Bartlett stated that much of the money that has in years past been loaned to fruit men of the West by Wisconsin bankers would be a better and more helpful investment if loaned to the farmers of Wisconsin. He urged that the farmer go to the banker for his cash rather than sell unfinished cattle and hogs.

Dean Russell, of the agricultural college, changed his topic of "The Unbeatable Combination" to "The Opportunity of the Farmer at the Present Time." Population and consumption have been growing apace during the last decade or so, according to Dean Russell. An increase of over 33 per cent has been reported in population, while production has been unable to keep up. James J. Hill, who said that in twenty years America will go to bed hungry unless her agriculture be improved, was quoted by the speaker in support of his argument for greater production. The farm has a responsibility, and this is to increase the yield so that the world can be fed at less cost. Present indications are not promising. Australia and Argentine have harvested their wheat crops for this year and the latter country has barely enough for its own use. With average production, America will have nothing left for export during 1917. We would have had none in 1916 had it not been for our bumper crop in the previous year. Shortage of wheat here in America will mean that we will have to bid against foreign nations for the use of this wheat, and the result will be high prices. Spring wheat can help to increase our supply. Pedigreed seed has proved its ability to produce three times as much per acre as ordinary seed. The solution lies in greater yields for the same acreage.

Professor Otis gave an interesting talk on "Making the Farm Pay." He brought out the influence of operating capital and number of cows, influence of the live stock returns for dairy products per cow and the diversity of and quality of the business done and the relation of each of the foregoing points to bigger profits in farming. Interesting questions were asked at all points of his address by bankers and farmers. At one point the question came up whether those having done record work in regard to their operations were satisfied with the plan and whether they considered it too much work. Burton M. Smith, banker, of North Lake, who has encouraged the idea in his community and incidentally brought down ninety farmers with him from his district, asked his men to testify. Five or six immediately pronounced the system as entirely satisfactory and of the greatest help of locating the unprofitable ventures of the year.

Farm soils and their testing came in for a short talk by W. J. Geib, of the soil-testing department. The litmus and lime-water test for acidity in soils and the importance of phosphorus, nitrogen and organic matter in the soil were pointed out. The legislature, in appropriating funds for the establishment of this department, has made it possible for farmers to have their soils tested at a reasonable cost, and the department will make such recommendation of the treatment of the soil as are apparent from such test. Nearly all crops take considerable phosphorus out of the soil in a three years' rotation, causing shortage of this plant food. The correction for this can only be made by application of manure and fertilizer.

A demonstration on how to get the most out of the dairy herd was conducted by G. C. Humphrey, with the splendid types of dairy animals.

JOHN DEERE IMPLEMENTS

BOOK FREE 156 page reference book—tells all about a complete line of farm implements and how to adjust and use many of them. A practical encyclopedia of farm implements. Worth dollars.

Describes and illustrates Plows for Tractors; Walking and Riding Plows; Disc Plows; Cultivators; Spring Tooth and Spike Tooth Harrows; Disc Harrows; Alfalfa and Beet Tools; Farm and Mountain Wagons; Manure Spreaders; Inside Cup and Portable Grain Elevators; Corn Shellers; Hay Loaders; Stackers; Rakes; Mowers and Side Delivery Rakes; Hay Presses; Kaffir Headers; Grain Drills; Seeders; Grain and Corn Binders.

This book will be sent free to everyone stating what implements he is interested in and asking for Package No. X-64.

JOHN DEERE, MOLINE, ILL.

The John Deere-Dain System Rake

Here is what you do with the Dain System Rake:

Follow the mower closely, rake while leaves are still active and place hay upon clean stubble.

Make straight windrows, and no dumping of rake is required. There is no bunching of hay in turning corners.

Put the hay in medium size windrows, with the bulk of the leaves inside and the majority of stems outside.

The windrows will be loose in the center for the free circulation of air. The hay retains its color and nutrition.

The John Deere-Dain System is the rake employed with the Dain System of Air-Curing Hay.

Reel raised or lowered, rake thrown in or out of gear and angle of teeth changed by means of convenient levers.

Ample capacity. The inclined frame grows higher where the windrow becomes larger—an exclusive Dain feature.

John Deere Plows

For seventy-nine years the John Deere organization has specialized in making high-grade plows. John Deere Plows are noted the world over for their high quality material, workmanship and their ability to do the best kind of work.

The policy of turning out the best has paid the John Deere Company. The John Deere factory makes more steel plows than any other organization in the world.

The name "John Deere" on a plow is an assurance of highest quality material and satisfactory service. It means real plow value.

The John Deere General Purpose Plow is especially adapted for farmers who rotate their crops or practice diversified farming and have tame sod as well as stubble or old ground to plow.

Moldboard has a long, slow turn which pulverizes the soil to best advantage.

In sod, it does not break up the furrow slice but laps the furrow sufficiently to bury green vegetation in loose soil, preventing further growth and hastening decay.

John Deere Plows are made in styles to meet all conditions, no matter what they are.

Look for the name "John Deere" when you buy.

John Deere Spreader

The Spreader with the Beater on the Axle

Mounting the beater on the axle simplified the construction, eliminated troublesome parts and made possible a successful low-down spreader with big drive wheels. There are no shafts to get out of line, no chains to cause trouble, and no clutches to adjust. The only spreader with beater and beater drive mounted on axle.

Low down, with big drive wheels out of the way. Easy to load.

Revolving rake, driven by manure moving toward the beater—no bunching of manure. Ball bearing eccentric apron-drive—a new and exclusive driving device.

Makes uniform spreading certain.

Wide spread attachment for spreading seven feet wide can be furnished for the John Deere Spreader. No chains nor gears. Quickly removed.

John Deere Factories

Every implement bearing the John Deere trade mark is made in a John Deere factory.

To insure the best in every class of implements there is a special John Deere factory for making each class. John Deere Plows are made in a plow factory; their hay-tools in a hay-tool factory; their planters in a planter factory.

Every tool in the John Deere line is made in a factory organized and equipped to make such tools.

All John Deere factories are in communication with each other. Each has the benefit and experience of all.

When it comes to purchasing raw material; John Deere factories as a unit, represent an enormous buying power. This is an advantage to purchasers of John Deere implements.

Don't forget that each John Deere factory is a leader in its field—that every implement it turns out is worthy of the name, "John Deere."

JOHN DEERE, MOLINE, ILLINOIS

EAGLE ENSILAGE CUTTER

The Anti-Clog Machine

Eagle Cutters are known for their great strength and power, yet they are the very acme of simplicity and are so constructed that it is *impossible to feed too fast.* You start, stop and reverse the Eagle Cutter instantly—all with the same lever. Positively safe for any one to use. *Safety Cylinder Head* does away with the possibility of damage to knives. *Improved Rollers*—upper one grooved, lower one spiked, give

50% GREATER FEEDING POWER

Positive speed relation between cutting head and fan makes the Eagle absolutely *anti-clogging.* Idler pulley and blower pulley done away with—direct drive on cylinder pulley only—*no slipping of belts.* These and other special features make it the safest, most powerful, most economical ensilage cutter you can buy. Send today for free booklet showing all sizes of Eagle Ensilage, Feed and Fodder Cutters.

Questions and Answers.

A Frozen Radiator.

As I froze up the radiator of my Ford car this winter, I would like to know if you know of any way to stop the leaks in the tubes. There are about thirty tubes cracked, the cracks being from two to four inches long. The garage men tell me that the cracks cannot be soldered, as it is impossible to get at them. I have tried filling the cracks with shellac, but it melts as soon as the radiator gets hot. I have tried plaster Paris, but it does not seem to harden. I would be very much pleased if you can help me out.

Answer.—Considerable skill is necessary to repair a leaky radiator, and local garage men, as a rule, are not much experienced in that line. A small soldering iron must be used; also a small blow torch that will throw a small, narrow flame. The parts to be soldered must be freed from all rust and dirt, so that the solder will stick. After scraping the surface bright, wash it with soldering fluid, warm it with the torch just below the melting point of solder, and apply the solder with the small soldering iron. Your garage man should be able to supply you with some radiator compound that might help stop the leaks if the cracks are not too wide. There are several brands of this compound on the market, and some of them are said to be quite effective.

Motor Hard to Start.

I have a 1913 Model T Ford car that has given me a great deal of trouble in starting the past season. I have a J. & B. master vibrator on it. I have taken it to the garage several times, but they have never done anything to it that helped it. I have put on new wiring from the timer to the coils and new plugs, but they do not seem to help it any. Have also tried batteries on it. Are the coils weak, or could there be a faulty connection somewhere in the magneto? After it has started, it will run fine, and throttle down with both gas and spark levers retarded. Will it injure a Ford motor to set the timing back a notch? Will it make any difference in starting?

Answer.—Your trouble is most likely to be located in the timer—the "commutator." The parts may be worn so that the roller does not make good contact, or the poor contact may be caused by heavy or gummy oil. Clean the parts thoroughly; replace any defective parts, and oil with a light oil that does not gum easily.

It will not injure the motor to set the timing back a notch, but this would probably make the motor harder to start and might cause some loss of power. Setting the spark to occur earlier would probably improve the starting, but might cause the motor to kick back when cranked slowly.

"Spark Gaps."

What is the use of a "spark gap" on a spark plug? Does a gap enable a plug to deliver a hotter spark and make starting easier? Will the plug use more current with the gap, there being only one contact point, while with the gap there are three contact points with a faint spark at each? If I use a twin Indian motor for a small car, could I run it with a vibrating coil instead of the present coil?

Answer.—It is questionable whether a "spark gap" is any benefit. It makes starting more difficult and requires more energy from the battery. It may make some improvement in the ignition of motors having trouble with carbon and oil fouling the plugs. If your magneto has been operating with a non-vibrating coil, it would not be advisable, and probably not possible, to use a vibrating coil with it. The current from such a magneto flows for a very short time only, so that the vibrator has not time to operate.

Charging a Storage Battery.

Some time ago in your paper I saw the question asked how to replace the electrolyte in a storage battery. The answer was to mix the acid and water, and charge the battery before and after pouring in the new solution. I would like to know how to charge the battery.

Answer.—The battery must be charged before the old solution is removed. It is charged by passing an electric current through it, the same as any storage battery. After the new solution has been added, the battery should be given another charge at once. The plates must not be allowed to dry while the electrolyte is being changed.

Fruits and Garden

Grow Raspberries For Family Use.

To the Editor:—It was once great times when we hunted for wild raspberries. Never very plentiful—the only places where they grew were along neglected fence rows and in the borders of the woodlands. It was perhaps their scarcity during those years that made us so appreciate them as a splendid wild fruit. Had they been as plentiful as the wild blackberry that grew everywhere they would not have held so high a place in our estimation.

People have always been slow to learn of advantages, and while it would have been the easiest matter in the world to have grown raspberries in our gardens or fruit lots, we never thought once of doing such a thing. Totally blind to our possibilities, we hunted far and near for the wild berries, and, liking them so well, we are satisfied now we always ate as many as we carried home in our small tin pails.

It was toward the close of the war of the rebellion that my brother and I, in one of the southern counties of Indiana, conceived the idea of setting out a raspberry patch in the home garden. Early in the springtime, with basket, spade, and a large corn knife, to cut away the upper portions of the long arching canes, we directed our steps to the wild raspberry plantations we knew of along the fence rows out on the farm. Having good luck with the first trip, we made a couple of others and succeeded in securing enough of strong, healthy roots to set a large patch. We guessed at everything we did, for we had no idea much about either setting out the roots or tending them to grow the fruit. There were no books or writing on the subject, but our success was very good.

The summer following the one we first set out the roots, we had a fine crop of berries. After that it was always easy sailing when we wanted to grow raspberries. Then we set the roots from the wild native sorts. Now, larger and better fruit is had by getting our vines from the regular nurseries. There are several good varieties—all good—and we advise all, who have no raspberries growing in their gardens or fruit lots, to prepare some ground and set out a liberal patch this spring.

Set the roots as they come from the nursery in rows five feet apart. Allow the hills to be three feet from each other. Keep the ground clean and loose the first season. Three strong suckers may be allowed to grow up from the roots the first year. Tie them to a stout stake, but top them to about three or four feet from the ground. Such young canes will bear a fine crop the second summer.

At this age of the raspberry plantation, adopt a new way of managing the young canes that spring up from the old roots. Allow only two canes to grow from each root. Top them at thirty inches in height. Top all alike. Then allow all the side branches or laterals to grow at will all summer. The next spring before the vines begin to put out leaves, cut each lateral off from the main canes to a length of from four to eight inches. All the old and dead canes and the former stakes are to be removed. The new canes need no support.

Treated in this way, there is a great profusion of bloom and each hill becomes loaded with fruit—a great deal more than can be had from the long rainbow vines, which result if the right kind of pruning is neglected.

W. A. G.

Lazy Vegetables

There is a difference. Some vegetables start growth at the drop of the hat, and never slow down until maturity. Others come dawdling along. The seed will be a week behind in germination, the growth slow, and the crop coming in behind time. Take the egg plant, and the mango pepper, which you plant at the same time the cabbage and tomato seed goes in. The latter will be up and thriving, but there is no sign of the first. You conclude that the seed must have been poor. But you give them a few days longer, on the bare chance of some delay. Then, as you take a hoe to stir the soil to use that space for something else, you find the lagard plants just poking their heads through the soil.

Their cousinly relationship is further shown by the fact that their taste for fertilizers is exactly similar. What's sauce for goose is sauce for gander. Well-rotted compost pleases them, and they respond lazily, but surely. If you are in the mood to deal generously, furnish them liquid manure, and dig in bone meal about the plants.

Spring Work on Badger Farms.

(Continued from page 1.)

Ailment after ailment of horses may be traced directly back to the teeth as the cause. Now what is the remedy? Examine his mouth and you will be surprised sometimes to find a tooth nearly an inch longer than the next. Have this tooth cut off at once and the edges filed down. Sometimes where the teeth are very badly out of shape it takes a skilled veterinarian to trim them up. Every horse should have a float rasp rubbed up and down his teeth to take the sharp edges off and this should be done three or four times a year. If you do not have one of these float rasps, order one and the sooner you get it the better. Many houses carry these and when you use them see how quickly you will become an expert in handling them on your horses' teeth and find out how much easier it is to keep your horses in the pink of condition.

These are just a few suggestions which come to my mind. I have not time to dwell on the care of the new born things on the farm. But good luck is sure to come to us all in 1917 if such suggestions as I have made herein will become an appetite with us and we will swallow them. They will aid our digestion in solving some of the unlucky things that might overtake us. What I mean is that we should not only think about these things but do them.

ALFALFA

Alfalfa is the greatest and Most Valuable New Plant for the Northern Farmer.

You Can Cut Three Crops of Splendid Hay Each Season.

It Will Succeed on Nearly Every Farm if Handled Properly and the right seed used.

Olds' Alfalfa Seed goes into nearly every state in the union.

We have a very large assortment grown in different sections and the seed is all of a fancy grade and all carefully tested for purity and germination.

There are no noxious weeds in any of our seed and it all shows a high germination test.

We offer the following stocks:

FANCY MONTANA ALFALFA Grown without irrigation in Central Montana, the most famous section in the United States for producing a hardy strain of alfalfa.

FANCY DAKOTA ALFALFA Strictly dry land seed from the celebrated Black Hills country of Western South Dakota. Some prefer this to Montana seed.

FANCY IDAHO ALFALFA Pure bright seed from Central Idaho, showing a purity test of 99½ per cent. Very fine.

FANCY NEBRASKA ALFALFA Nebraska seed has gained quite a reputation for northern sowing. Our stock grew in Central Nebraska and without irrigation.

FANCY NEVADA ALFALFA Beautiful clean and bright seed with a 95 per cent germination.

FANCY KANSAS ALFALFA At the Wisconsin Experiment Station Kansas seed is claimed to be as hardy as Montana seed. Our stock shows the highest tests of any seed we have.

GENUINE GRIMM ALFALFA If you are afraid of winter killing sow Grimm seed. It costs a little more, but less seed is required per acre.

Samples of all the above showing tests sent Free on request.

Make Your Dairy Pay

EVEN though you have no more than three cows, there are many good reasons why you should have a **Lily** or **Primrose cream separator.** It is the only way to get all the cream. It gives you warm, wholesome skimmed milk to feed. It saves a lot of tiresome work. When you get your **Lily** or **Primrose** separator busy, you will wish you had done it when you first got your cows.

Lily and **Primrose** separators skim down to the last drop of cream in each gallon of milk. You can't beat them for close skimming. They turn easily. The bearings oil themselves as you run the machine. They don't get out of adjustment—that is important. By turning a screw on the outside of the separator once in six months or so, you keep the bowl at the correct height, and this is positively the only adjustment necessary.

Next time you go to town, drop in and see the obliging dealer who handles **Lily** or **Primrose** cream separators. In the meantime, drop us a line, and we will send you some interesting reading matter about separators.

Are You Letting Your Barn Rot Out?

THIS old barn had no ventilating system to carry out foul air and excessive moisture. Nails rusted, boards became loose, soon the walls were full of holes. In cold weather the stock was uncomfortable and used up food to keep warm. Note the answer in the new barn—equipped complete with a

KING SYSTEM OF VENTILATION

KING Trade Mark

How long would your barn last without good ventilation? Are you letting excessive moisture rot away the timbers? Better get in touch with us and learn how little it costs to get a King System. Three to four cents a day per animal in the barn soon pays for it. Most farmers can save much in feed with a King System.

Write for Our FREE Book on Barn Ventilation

King System is planned for the building it goes into. It can be installed in an old or new building. King Aerators on the roof can be used with or without the System. Write today.

KING VENTILATING CO., 1144 Cedar St., Owatonna, Minn.

La Crosse County Guernsey Breeders Meet.

The La Crosse County Guernsey Breeders' Association held its annual meeting and banquet Wednesday, March 7th, at the Hotel May, West Salem. It was the largest and most enthusiastic group of Guernsey breeders ever assembled in the county.

S. L. Dudley, president of the association, opened the program with a short address in which he spoke of the work of the association, the need of better bulls and the necessity of cow testing to determine which are the continually profitable animals.

Prof. T. H. Campion, secretary, related the experiences of the officers in planning to put more life into the organization. A survey of the Guernsey resources of the county had been taken and there were found to be over 130 pure-bred sires in use in the county. The executive board is engaged in trying to bring these Guernsey men into coöperation. There are plenty of inquiries coming to the secretary for stock, but without knowing just where it is and what is for sale makes it difficult to answer buyers who ask whether large lots can be purchased in this county. Last year cards were mailed to members asking them to report what they had, what was for sale and whether they desired to buy or trade anything for their own use. The response was not encouraging. Members were urged to report fully this year so that the secretary might have all the facts at hand when answering possible buyers.

The subject of raising the annual dues to $1 was brought up and passed upon favorably.

The old officers, S. L. Dudley, president; T. H. Campion, secretary; H. M. Bonsack, treasurer; W. D. Sandman, H. D. Lovejoy and Otto Wolfe, members of the executive board, were reelected.

Prof. G. C. Humphrey, of the University of Wisconsin School of Agriculture, was present and delivered an interesting talk. He advocated more intensive methods, wider dissemination of information regarding the value of the breed, the upholding of the tuberculin test and closer scrutiny of the operations of buyers.

The association seems in the mood to carry on aggressively new plans for putting La Crosse county Guernseys on the map. A summer picnic will be held in June with judging contest for both men and boys. A boys' calf-judging contest will also be held and the prize will be a high-class Guernsey bull calf. Sherman Dudley says it won't be a $50 animal, either.

The Waupaca-Portage Holstein Breeders' Meeting.

Resolved to be first in the clean-up movement and to keep their section of the state free from tuberculosis, the Waupaca-Portage Holstein breeders, at their annual meeting at Waupaca on March 3d, passed a resolution by unanimous vote approving the enactment of a law requiring the testing of every dairy animal in Wisconsin for tuberculosis. The resolution further urged the members of the legislature from the counties of Waupaca and Portage to use every legal means to help pass such a measure during the present session of the legislature. George C. Murray was especially active in securing this resolution. The association is extremely anxious for the passage of a tuberculin law and indications are that if there is any fight on such a bill, it will not be from these two counties. Of better than thirty carloads of cattle shipped from this district recently only three individuals were found to be reactors. Naturally the association is proud of its clean record and will do its utmost to keep tuberculosis out of the herds of Waupaca and Portage counties.

The chief speaker of the meeting was John B. Irwin, of Minneapolis, owner of the famous Duchess Skylark Ormsby. Mr. Irwin pointed to the record of this cow in support of his assertion that the largest producers are also the most economical producers. This cow is credited with making better than 1,500 pounds of butter during one year and her record of feed cost and profit shows a net profit of something like $70 more than any other record cow. Mr. Irwin urged better study of the individual cow and greater care in the selection of such feed in order to obtain the best results.

During the noon hours the members of the association met at Hotel Delavan, where an informal lunch was served and experiences reviewed.

The association is up to the 100 mark at the present time and will grow considerably during the coming year. The officers for the coming year elected at the meeting were W. P. Kissinger, Waupaca, president; F. E. Paronto, Maniwa, vice president; Arthur Ritchie, Royalton, secretary.

Transplanting Cows.

To the Editor:—It is a pretty delicate process at best to take a cow from the place to which she has become "wonted" through the experience of years, perhaps, and place her in the midst of new surroundings. I have seen cows that never did quite overcome the process, but were not quite as good as they were before. So it becomes a matter of no small importance how we do this kind of work that sometimes seems to be necessary.

In general, it may be said that the younger the cow the less she takes the change to heart. The calf or the young heifer does not seem to mind it many days. Older cows are more slow to adapt themselves to the surroundings of the new home. But even with young stock there usually must come certain "fightings without and fears within" before matters are fully adjusted. The new heifer must fight for her place in the herd.

The best way seems to me to be to keep the old fighters out of the way for a few days, until the newcomer gets her bearings and understands more perfectly what her position in the herd is to be. Most herds have one or more of these cranky cows that seem to consider it their duty to lick out every new member of the cow family. By stabling these a little while a general rough and tumble may be avoided. By the time the fighter is released the new cow will most likely be going about her business so quietly that little attention will be paid to her by the belligerent boss of the herd.

In another way care needs to be taken to make the coming of a new cow as comfortable as possible. The master may be particularly devoted to her interests. She will appreciate it if we rub her down and groom her carefully, talking with her and providing her with choice bits of food. This side of the cow's nature is not cultivated as much as it should be. Cows that are made much of, to which we speak and which we caress and pet, are very apt to use the food we give them to better advantage than those that are homesick and in fear all the time that they are going to be hurt. That means more milk and better milk. I am not particularly of a sentimental nature when it comes to these matters, but I have found out by many years of experience that kindness does have a distinct money value.

Then, too, no dog should be permitted to worry the new cow. I once sold a cow to a neighbor a mile away. We did not at that time keep any dog. The neighbor did. One day we found the cow we sold back home. It proved that she had had some controversy with a dog and concluded that that was no place for her. She scaled every fence and took a bee line for home.

Finally, the transplanted cow should have as nearly as possible such treatment in the new home as she had in the old. When we buy the new cow we may find out how she has been fed and otherwise cared for and then by

following somewhat in the old channels we may very speedily get the full service of the animal, and that is worth while. Even a few days of trouble will make a difference in this season's profits. E. L. V.

Cow Testing Reports.

River Falls and Roberts Association.

To the Editor:—There were 325 cows tested in the River Falls and Roberts Association during the month of February and fifty-two produced forty pounds of butter fat or more. The following table gives the names and records of the cows in the association which have produced more than forty-five pounds of butter fat during the period of thirty-one days, ending March 4, 1917:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

The highest average butter fat production was 45.48 pounds. Herd owned by D. E. Flower. There were 325 cows tested with average butter fat production of 27.85 pounds.

C. G. Carlson, Tester.
J. M. May, Secretary.

The Chilton Association.

To the Editor:—During the month ending ending February 13, 327 cows were under test, and sixty-six produced over forty pounds of butter fat. A pure-bred Holstein, owned by John Salm, carried off the honors for the month with seventy-six pounds of fat to her credit. The tester in this association found some trouble with calf scours and recommended a simple remedy composed of three parts Salol, and one part Bismuth nitrate. The dose is a teaspoonful on the tongue of the calf followed by a cup of warm milk. In extreme cases repeat the dose every two or three hours. Any druggist can fill the prescription. The forty-five pound list for the month ending February 13th is as follows:

Owner and breed	Age	When fresh	Lbs. milk	Per cent fat	Lbs. B. fat

Subscriber, Calumet Co., Wis.

Stratford Co-operative Association.

To the Editor:—During the past month 295 cows were under test in our association. Sixteen produced more than forty pounds of butter fat. A pure-bred Guernsey, owned by William Schneider, carried off the honors, producing 1,180.7 pounds of 4.8 per cent milk, or 56.7 pounds of fat. Jake Spindler's herd produced an average of 924 pounds of 3.92 per cent milk or 36.72 of fat. The forty-five-pound list for February is as follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

The Things You Look For in a Silo

YOU WANT	CONCRETE
a silo that won't burn:	*is fireproof*
a silo that keeps air out:	*is air-tight*
a silo that keeps rats out:	*is solid as rock*
a silo that needs no repairs:	*requires no upkeep*
a silo that won't warp:	*keeps its perfect shape*
a silo that won't rot:	*is unaffected by moisture*
a silo that won't open up:	*has no joints that can open*
a silo that won't blow down:	*withstands tornadoes*

In view of these facts would it pay you to try to save a few dollars by building a silo less permanent than concrete and so much less efficient?

Profitable and Durable Concrete Silos

Read what the Texas Agricultural Experiment Station says in a recent report:

"This station built a 20 by 50 foot reinforced concrete silo in the spring of 1914. It is in perfect condition. We did not lose a hatful of silage outside of the small amount usually lost in taking off the top. It is giving us complete satisfaction. We have no fear of the wind ever blowing it down, it going to staves, becoming lopsided, or anything at all going wrong with it."

If there is a concrete silo in your neighborhood go and see it. Ask the owner how he likes it; whether he would have any other type of silo at any price. Note that the material is the same as that used for big grain elevators, tall chimneys and large buildings.

We have published a practical little book on concrete silos. A postal card will bring a free copy. Say "Send me your Concrete Silo Book."

The Cows Which Make Money.

To the Editor:—There were 506 cows under test at the end of the year in the Alto Cow-Testing Association. Two hundred and seventy cows made monthly records of forty to forty-five pounds of butter fat; 138 made month record of forty-five to fifty pounds of butter fat; seventy-one cows made monthly records of fifty to fifty-five pounds butter fat; thirty-five cows made records of fifty-five to sixty-five pounds of butter fat; twelve cows made monthly records of sixty to sixty-five pounds of butter fat; four made monthly records of sixty-five to seventy pounds butter fat and two exceeded seventy pounds of butter fat for a given month. The following table shows the record for the year of the thre best cows in the association and also of the poorest cow:

No.	Milk	Test	Fat	Value	Feed	Profit
1	9273	5.3	491.5	$176.94	$49.57	$127.37
2	9545	4.76	354.9	159.16	42.18	116.98
3	9036	4.9	445.4	157.74	44.67	113.07
Poorest cow						
	3749	3.93	147.4	51.32	34.13	17.19

It will be noted that it takes 720 of the poor cows to make as much profit as the three best cows made. This year's work closed with fifty-nine cows showing 300 pounds of butter fat or over and a goodly number showing 400 pounds or over. F. L. Cuenot.

Official Tester Fond du Lac county, Wis.

In Door County.

To the Editor:—The following table gives the the names and records of the cows in the Door County Cow-Testing Association which have produced more than 45 pounds of butter fat during the period of thirty days ending February 28, 1917:

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Serious Chick Diseases.

That traces of the true, virulent form of white diarrhea of chicks, caused by bacterial infection, have been found in Wisconsin, is the statement of authorities at the college of agriculture, University of Wisconsin, following careful laboratory blood tests.

"This disease is prevalent in some parts of the East, but as yet is not common in Wisconsin," is the statement of station authorities. "Wisconsin farmers and poultrymen should be exceedingly careful when they buy female stock and eggs from dealers in the East, as infected hens may transmit the disease through the eggs to the chicks hatched from them. Infected chicks will transmit the disease in turn to others in the flock."

Although doubts may be settled once and for all by submitting blood samples to the state experiment station laboratory for analysis, the integrity of the dealer who sells eggs and breeding stock is the main reliance of the buyer in this matter, seems the common opinion. As special directions must be followed in taking blood samples from hens for this purpose, persons who contemplate taking this extra precaution should write to the college of agriculture at Madison for detailed information.

The contagious form of white diarrhea threatens to be highly prevalent this season. Many chicks are killed annually by it. The adult females, even though they apparently recover from the disease, still harbor the infection in their bodies and carry it over from year to year, thus endangering the health of the entire flock.

Two Classes of Poultry People.

To the Editor:—That there is more to the poultry business than most people concede is responsible for ninety-five out of every hundred who engaged in it making a failure.

The people of the United States pay annually nearly $1,000,000,000 for table eggs and poultry. The 95 per cent who are making the failures entirely disregard this enormous demand. They strive to prod_ce the $100 cockerel and pullet, which seldom materialize, and by doing so they sacrifice stamina, vigor and egg production.

We have two classes of breeders, but termed "fancier," the other "poultryman." The sole object of the first named is to win ribbons. Inbreeding will bring the quickest and best results, but what has he lost? Stamina, vigor and egg production. On the other hand, the poultryman's object is to produce the best specimens and increase egg production.

It is generally known that success in any undertaking demands time, systematic labor, plans for the future and love for one's work. This is especially true in the poultry business.

Just a few years back "chickens" were just "chickens," and the system the farmers followed was to swap roosters with a neighbor. This poor policy did not warrant expensive improvements or expenditures in time and money. Eggs at 8 cents a dozen and poultry at 6 and 9 cents a pound presented small incentive to better the product. Prices at that time for friers and broilers were very low and markets were not of the best. To sell baby chicks would have been considered foolhardy, and as far as fancy eggs for hatching were concerned —well, everybody had them. We have watched the gradual evolution of the hen with admiration.

Always we have been lovers of good poultry and now own a creditable flock of 800 select hens. For eight years we have worked almost exclusively with S. C. W. Leghorns, but we also carry a line of bred-to-lay S. C. R. Reds, Buff Orpingtons and Barred Rocks, to which we are devoting more of our time. Today everything pertaining to the poultry production is worked out on a strictly scientific economic basis. For us

Ironclad TRADE MARK
Wins in the Two BIGGEST HATCHING Contests Ever Held
Why take chances with untried machines when for only $11 we guarantee to deliver safely, all freight charges paid (East of Rockies), BOTH of these big prize winning machines fully equipped, set up ready for use? Why not own an IRONCLAD — the incubator that has for two years in succession won the greatest hatching contest ever held? In the last contest conducted by Missouri Valley Farmer and Nebraska Farm Journal, 2,000 Machines were entered including practically every make, style and price. With the Ironclad — the same machine we offer with Brooder freight, paid for only $11, Mrs. C. F. Merrick, Lockney, Texas, hatched 148 chicks from 148 eggs in the last contest.
30 Days Free Trial
Money Back if not Satisfied
150 EGG ironclads are not covered with cheap, thin metal and painted like some do, to cover up poor quality of material. Ironclads are shipped in the natural color—you can see exactly what you are getting. Don't class this galvanized iron covered, dependable hatcher with cheaply constructed machines—and don't buy any incubator until you know what it is made of. Note these Ironclad specifications: Genuine California Redwood, triple walls, asbestos lining, galvanized iron covering, galvanized iron legs, large egg tray, extra deep chick nursery — hot water top heat, copper tanks and boilers, self regulator, Tycos Thermometer, glass in door, set up complete ready for use and many other special advantages fully explained in Free Catalog. Write TODAY or order direct from this advertisement.

Belle City Incubator Co., Box 106 Racine, Wis.

poultry culture is a hobby with possibilities second to none.

In breeding for results, no matter what breed, one must not only look to his breeders for the season's results, but must go back several generations. Have the great grandfathers of your flock had roup, tuberculosis or white diarrhea? These troubles will surely show up if your parent stock has been so affected.

Cleanliness must be pesistently enforced in every department, and if combined with intelligent mating one will reap a full harvest of fine, healthy chickens.

For several years we have made a specialty of shipping baby chicks, and in order to get the best results we have devoted much study to producing the largest number of chicks from the least number of eggs. We figure on having our breeders in the pink of condition for their long grind. A well-balanced ration with green foods, such as alfalfa, cabbage and potatoes, and an abundance of water will keep them so. We do not use force feeds for our breeders, as experiments have shown us that forcing for production during breeding season is the best way to get infertile eggs, weak germs and sickly chickens. We have found by experience that eggs laid on dropping boards have but one chance in five of producing a chick. It seems that the chemical action of the droppings on the shell destroys its composition and lessens the chance of chick production.

We place more emphasis on the breeding stock and care of eggs to be incubated than on the method of incubation. A few pointers in condensed form: Stock should be full blooded and bred to lay. Breeding birds should be hens and bred to superior males with egg records back of them. These should be kept in perfect health, which means fertile eggs and strong chicks. Take great care that eggs, which are kept for hatching, do not get chilled. Use only uniform eggs, not too large or too small, and do not use those that are over one week old—the fresher the better. Ever-Laying Egg Farm.

Better Success With Incubators Than With Hens.

To the Editor:—I have only used an incubator two seasons and a brooder one, but I had better success with them than with hens, a larger percentage of incubator eggs hatching strong, healthy chicks free from vermin. It only takes a few minutes night and morning to take care of an incubator, and how much easier it is in rainy weather than it is to care for sitting hens.

I use a hard coal brooder, and I would not go back to the old way again. I put 300 chicks in a brooder and only lost one of them the first month, and they were such a little bit of work to take care of. At first I was so afraid the fire would not burn all night and the chicks would chill, but I found there was no more danger than of a good clock stopping. I filled the fountains with water, fed dry oat meal and filled the stove with hard coal, emptied the ashes, and that was all I had to do till it was feeding time again. I do not think it required an hour's work to take care of 300 chicks a day. But it is different taking care of hens with chicks. Just when they should be keeping them warm they are dancing around trying to get out and tramping and killing the chicks in the meantime.

I often hear farm women say, "I never could learn to run an incubator, and chicks die in a brooder." I think if a woman can learn how to make good bread she can learn how to operate an incubator, and there is nothing to learn about a hard coal brooder except to make a fire. It is self-regulating. I have no interest in incubators and brooders, but write this to help farm women raise more poultry at a greater profit and much less work. Mrs. McNally.

A Few Don'ts and Whys For Mating.

To the Editor:—I read an article some time ago in one of our farm weeklies, written, perhaps, by some would-be poultryman who appeared to hold the idea that any pure-bred chicken was good enough for the farm as long as it was vigorous and prolific as a layer. He did not appear to think breeding for color improvements was a necessity or helped any, for he said the average farm flock caretaker did not appreciate it enough to pay for the trouble it caused the grower to produce that color. I am afraid this man was prejudiced to standard colors because he lacked in skill to produce birds that suited him or maybe they suited him and did not suit a man who knew the standard requirements of a pure-bred bird.

It is my idea that the farm pure-bred flock should be bred for color improvements as strongly as for any other reason. Of course, if one is skillfull enough to breed for laying improvements that is another great thing. However, this should not offset color, and it is an easy matter to keep one's flock uniform if a little care is taken in that direction.

Now for a few dont's and whys that will aid you in color improvement. In White Rocks or Wyandottes don't breed from a male or female that has more than one-third the surface of ear lobe white, for this is a disqualification. Don't breed from a bird that has any black feathers, and care should be taken that they are as free as possible from ticking or peppering. Brassiness in hackle and saddle is a defect. The whiter the bird the better. Both Rocks and Wyandottes should have good, clean, yellow legs. Don't breed from a bird with stubs of feathers on legs or between toes. This is another disqualification.

In White Orpingtons look out for the same color defects as in Rocks or Wyandottes. However, their leg color should be pink or white and free from stubs. Yellow legs is a disqualification.

In all varieties of Buffs it is not advisable to use birds as breeders that have black tails. The preferred Buff is a bird that is a shade lighter than gold and carries the same color throughout, and under color does not want to be white. A mealy Buff is not desirable.

In Barred Rocks don't breed from a brass-colored male with understruck barring, or one that has any black feathers. A Barred Rock should be barred, and from the quill to tip of feather. Barring on feathers in primaries and secondaries of wings should run as near straight as possible. Birds with legs other than yellow are not good to breed from.

In the future I will write on the Partridge, Silver Laced, Golden Laced and black varieties. If anyone has any questions they wish to ask re-

Raynster

Reg. U. S. Pat. Off.

Takes the Terror Out of Bad Weather

You cannot escape the bad weather, but you can protect yourself against it. Whether it rains, snows or blows, you will be snug and comfortable in a Raynster.

Look for this label on your coat

Raynster US NEW YORK BOSTON

Reg. U.S. Pat. Off.

Buying a Raynster means getting something dependable—a coat that will last and keep its shape. That's the great big reason why you should call for the Raynster by name.

Service Coats for Farmers, Drivers, Workers

Raynsters come in a number of different styles, fabrics and colors, heavy and light weight—rubber surface coats, well suited to the needs of farmers, drivers and those who require general work and service coats. Also double and single texture Raynsters. Raynster is the name of a new line, better and safer than any weather coats ever before on the market.

Our special process of vulcanizing literally bakes the rubber into the strong fabrics of the rubber surface coat.

You can depend upon it, your rubber surface Raynster will be thoroughly waterproof. Other Raynsters in appropriate styles for men's dressy wear and for boys, girls and women. Also auto coats. If your dealer does not handle Raynsters, write to address below and we will tell you where they can be obtained.

Wisconsin Wins In Big Hatching Contests Every Year

Why Pay More

For only $10 you can get these two prize winning machines, delivered, freight paid east of the Rockies. You take no risk—money back if not satisfied. You can order direct from this ad. Ask the publisher about us.

Wisconsin Incubators have long proved their wonderful hatching qualities. Competing with every make known, they won in the five big annual National Hatching Contests. Think of it. Five consecutive victories. That certainly proves you can't make a mistake. Shipped on 30 Days' FREE Trial

Both Machines Freight Paid For Only $10

180 Egg Incubator and 180 Chick Brooder both for only $12.75

MONEY BACK IF NOT SATISFIED

10-YEAR GUARANTEE

Wisconsins have hot water heat, double walls, air space between double glass doors, copper tanks and boilers, self regulating. Nursery under egg tray. Made of finest, select, clear CALIFORNIA REDWOOD, not pine, paper or other flimsy material. Incubator finished in natural color—not painted to cover up cheap, shoddy material. Incubator and Brooder shipped complete with thermometers, egg tester, lamps, everything but the oil. This is the best outfit you can buy. If you don't find it satisfactory after 30 days' trial, send it back. Don't buy until you get our new 1917 catalog, fully describing this prize winning outfit. WRITE FOR IT TODAY. You can't make a mistake in buying a Wisconsin. On the market 15 years.

WISCONSIN INCUBATOR COMPANY, Box 100 Racine, Wis.

garding breeding to overcome defects I will gladly answer. Address the editor. Poultry Judge.

[We hope that our readers will feel free to comment on the remarks of Poultry Judge. Is he right about these matters or are his views "off" color?—Editor.]

The Hard Coal Brooder.

To the Editor:—Since writing about incubators and brooders in a recent issue I have had so many letters asking about the hard coal brooder that I would like to answer most of them in a general way.

The hard coal brooder will burn any kind of fuel, but to be self-regulating it must have hard coal, then there is no danger of fire. The brooder room should be about ten feet square. It is hard to put chicks of different ages in the same brooder. I divided the room in two, leaving half the brooder in each room. I used screen, as it lets the heat through and there is no danger of fire. Then I had a door on each side of the room opening into a small yard. I had about 200 chicks in each bunch until the youngest of them were three or four weeks old, then let them all together.

One need not cool the brooder room by letting the chicks out. Make a frame for the door and tack on cloth, leaving a very small opening for the chicks. The chicks will go back to the stove when they begin to get chilly, and on rainy days they can be left in the house. They are so contented all the time handled in this way.

Mrs. McNally.

The Amount of Mixed Grain For Poultry.

One of our subscribers says that he has 300 Brown Leghorn hens and he has on hand a plentiful supply of corn, oats, bran and meat scraps. He also has some alfalfa hay and desires information in regard to the amount of each that he should use.

In addition to the grain feed, we would suggest to mix some wheat along with your corn and oats. Providing wheat was used you would not need the quantity as required of corn or oats at this season of the year.

Although at the present price of wheat many poultry raisers are entirely doing away with the use of wheat, and are cutting down the cost of feeds by feeding more green feeds, such as sprouted oats. Green food is especially valuable in feeding for winter eggs. Succulent greens should be fed as religiously as grains during the winter months. Not only do they promote health and higher efficiency of the egg-making organs, but they save on the grain bills.

Give your flocks enough to eat of enough different grains, after an allowance of a maximum of various green foods, sprouted oats, steamed alfalfa or clover, because of their cheapness, and the ration is then properly balanced. Your alfalfa hay will nicely answer this purpose as green feed, providing it is heavy and not too coarse.

As to the amount to feed, a visit to the henhouse after the birds have gone to roost and an examination of the crops will indicate the correct amount has been fed. Approximately twice as much grain should be fed at night as in the morning. In the morning feed half a handful to each bird; at night double this amount.

A good grain mixture would consist of 100 pounds cracked corn, fifty pounds oats, and fifty pounds wheat. In addition to 100 pounds bran, add fifty pounds corn meal, fifty pounds wheat middlings and fifty pounds meat scraps. This, together with the above grain mixture and steamed alfalfa, gives you a variety of feeds that should give you a good egg yield during the winter.

A Cat With a Record.

To the Editor:—Humphrey is just a large Maltese cat with expressive eyes and lots of cat sense. If he were a chicken he would be called a capon and I suppose that fact accounts for some of his good habits. He is eight years old and a worker in every sense of the word.

Let me tell you of some of his accomplishments. He drove the rats from our farm and when gray squirrels were taking our neighbors' chickens he caught and brought to the house thirteen of the pests. In 1915 he brought my sister, who owns him, twenty-two pocket gophers. In 1916 he broke his own record and brought the number up to an even two dozen. In our county there is a bounty of 10 cents for every gopher. So Humphrey, by catching gophers, paid the taxes on our dog.

During all this time he caught two pigeons, one young bluejay, and sparrows too numerous to mention. I was sorry about the pigeons, but I think the sparrows multiply so rapidly that there is no danger of their tribe becoming extinct.

After reading this much of Humphrey's history I think you will agree with me when I say he is worth while not only in the poultry yard but even in the hay field. He is a cat, yes, but worth his weight in gold.

L. E. Payne.

Use Soap and Water in Incubators.

To the Editor:—I have wanted to write a warning to incubator users for a year. Last year a writer said to disinfect the incubator with a good, strong dip and run it open to air for two days before resetting. So I did. I had had two good hatches just cleaning before with good soap and hot water—had good 90 per cent hatches. The next two were for my sister and mother and this article had just been read, so I disinfected with a good dip such as I spray the henhouse with (about one part to fifty), ran the incubators open for two days and then filled them with clean, fresh eggs. I thought I gave it extra care, but the dip was so smelly that I was worried. Well, there were fourteen chicks out of 234 eggs. So I say "don't dip"—use soap and water. Fannie Daun.

The Hens to Hatch From.

To the Editor:—I see some of your readers are giving their experience as to what age hens are best to save eggs from for hatching. Let me give you the results of a test I made.

I took twelve hens ten to twelve months old. Their coop had been rather cold, so they had not laid much during the winter, but they were in fine condition. I put with them a first-class two-year-old cock that had been shut away from the flock during his first year. I used the eggs for our own hatching and sold many of them and I do not think there was a setting in which there was over one egg lost and several reported a chick for every egg. My customers came back for more eggs, saying they never saw such strong, vigorous chicks.

M. B. K.

It's the Healthy Hens that Give You Strong Chicks

Now that mating time has arrived, it's up to you to see that your poultry get a tonic and internal antiseptics to make them vigorous and free from disease. *Therefore, feed Pan-a-ce-a.*

In that condition your hens will lay better, you will get more healthy, fertile eggs and the chicks will stand a better show of reaching maturity. *Therefore, feed Pan-a-ce-a.*

Dr. Hess Poultry PAN-A-CE-A

It's a Tonic—Not a Stimulant

And, before the hatches come, I want to warn against gapes, leg weakness and indigestion, for these ailments are responsible for half the baby-chick losses. *Therefore, feed Pan-a-ce-a*—it will save you these losses.

My Guarantee

So sure am I that Dr. Hess Poultry Pan-a-ce-a will help make your poultry healthy, help make your hens lay and your chicks grow, that I have told my dealer in your town to supply you on condition that if Pan-a-ce-a does not do as I claim, return the empty package and get your money back.

DR. HESS & CLARK, Ashland, Ohio

Dr. Hess Stock Tonic Expels Worms

Conditions all animals, gives health, good digestion, keeps them toned up. Prepares horses for spring work and cows for heavy milking. 25-lb. pail, $2.00; 100-lb. drum, $6.50. Smaller packages as low as 50c (except in Canada and the far West and the South).

Dr. Hess Instant Louse Killer

Kills lice on poultry and farm stock. Sprinkle in dust bath and about roosts, nests and houses. Dust into hair of animals. Destroys bugs on cucumber vines, cabbage worms, slugs on roses, etc. Comes in handy sifting-top cans, 1 lb., 25c; 3 lbs., 60c (except in Canada). Fully guaranteed.

I'll Save Your Veterinary Bill

When you have a sick or injured animal or ailing poultry, write me, telling symptoms. Enclose 2c stamp for reply, and I will send you prescription and letter of advice, free of charge.

1½ lbs., 25c; 5 lbs., 60c; 12 lbs. $1.25; 25-lb. pail, $2.50 (except in Canada and the far West).

When Writing to Advertisers Mention The Wisconsin Farmer

NATIONAL OWNERS

Gets BIG Hatches

Select your incubator the same as you do a doctor or lawyer. Get the one that is reliable, efficient, practical—the one that has stood every test and stands above all others. If you do this you will order the National. It is the greatest incubator bargain ever offered. Made of only the best high grade material and built on U. S. Government Specifications.

How We Make It

We want to prove to you that the National is the best built, best equipped and most durable machine built for the money. Hot water heating plant—Double glass doors—Special high grade cold rolled copper tank—Asbestos lining—Self regulating—Self ventilating—Safety lamp—Tested thermometer—Metal Case. Easy to operate. Will not warp or shrink. With proper care will last a life time.

Safety Lamp

Cannot explode or ignite—reliable, unbreakable. Produces steady blaze without smoke or fume. A sputtering, fuming, unreliable lamp will spoil your hatch and may cause fire.

40 Days' Trial 12 Year Guarantee

To save time you can order direct from this adv. You risk nothing. Our money back guarantee protects you in every way. Try the National for 40 days—put it to the greatest of all tests—THE HATCH. If you are not satisfied it is the greatest bargain you ever saw, return it—we will promptly refund your money. We deal fair and above board—no red tape. We could not advertise in this paper if we did not live up to everything we say. So you are absolutely safe.

FREE 1917 Poultry Book

Far more than a catalog. Tells all about the care of eggs and chicks. All about the great hatcher and the men behind it. Just the thing for beginners. Send postal today sure for this book worth dollars to every poultry raiser. Address

National Incubator Co., Box 506 Racine, Wis.

THE NATIONAL BROODER BETTER THAN THE HEN

Protects the tender chick from all harm. Keeps proper temperature—properly ventilated—strong—durable—Sent prepaid east of the Rockies.

165 Egg Incubator
165 Chick Brooder
Both $12.50

Praise the NATIONAL

No matter what others say—the real value of any incubator is its hatching value. Read these letters carefully:

"I consider your incubator a great bargain. Will get some more this winter."—*T. B. Moss, Sharon, Pa.*

"I have one of your incubators and think there is nothing like it. They are all you claim them to be."—*Mrs. John Barth, Ruffs, S. D.*

"I got 96 chicks out of 100 eggs and am well satisfied. You certainly will sell lots of machines here next year."—*Fay Holcomb, Bancroft, Michigan.*

"Send me one 165 egg incubator as soon as possible. My other one is O. K."—*Harry Moff, Clarksburg, W. Va.*

"I am well pleased with your incubators. My neighbors say they will have a National next year."—*Monroe Olson, Racine, Missouri.*

"I do better with the National than any other incubator. I hatched chickens all winter long here."—*Geo. Sherman, Jonesboro, Ark.*

"I have been running two other kinds alongside the National but they have not done anywhere near as well. Next year I expect to buy more incubators and shall get the good old National."—*E. Merrit, Chester, Vermont.*

"I am a girl 15 years of age. As my father had a great deal of work this spring I took the work of tending the incubator upon myself. It was a pleasure to attend to it. Your incubators are so easy to operate that a child of nine or ten could do the work."—*Anna Krause, Little Falls, Minn.*

"I am well pleased with your incubator. I put up against another machine and beat it so and I am using the other for a brooder. I will want a half a dozen more for spring hatching. I have passed the machine to the fair right and I have a neighbor who would like to get one or two."—*R. C. Wrightman, Brighton, N. Y.*

SAVE YOUR CHICKS

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production

THE demand for farm labor in Canada is great. As an inducement to secure the necessary help at once, Canada will give **one hundred and sixty acres of land free as a homestead** and allow the time of the farm laborer, who has filed on the land to apply as residence duties, the same as if he actually had lived on it. Another special concession is the reduction of one year in the time to complete duties. Two years instead of three as heretofore, but only to men working on the farms at least six months in 1917. This appeal for farm help is in no way connected with enlistment for military service, but solely to increase agricultural output. A wonderful opportunity to secure a farm and draw good wages at the same time. Information as to low railway rates may be had on application to

SILO FORMS.

FOR sale—Two sets of concrete silo forms with chute. Harold Janke, Fredonia, Wis.

FARM LANDS.

NORTH Dakota in all essentials—soil climate, crops, people, is a second Iowa. Because of heat, wet and rust the 1916 grain crop of North Dakota was short, yet government reports show $167,544,000 or $2,253 per average farmer. In last 7 years average farmer in North Dakota produced $1975 worth of crops; in South Dakota, $1,639; Iowa, $1,631; Illinois, $1,437; Minnesota, $1,396; Wisconsin, $901. Now is time to get North Dakota land, while price is low. No commission to us. Great opportunities open. Write for our direct dealing plan, booklets, maps, etc. J. S. Murphy, immigration agent, Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minn.

ALFALFA LAND in the garden spot of South Dakota. Four cuttings yearly; wheat yields 40 bushels, other crops in proportion. 320 acres beautiful land, four miles from good railroad town; 50 acres in cultivation; good water, fair buildings; survey of proposed irrigation ditch crosses highest corner. Owner south for health and $20 per acre takes it for quick sale. Also choice relinquishments and other bargains. Square Deal Land Co., Farmingdale, S. D.

80 ACRE farm for sale or exchange. Good buildings, near school and creamery, about 30 acres under plow, 10 more ready, balance easily cleared, and good pasture, located six miles west of Medford, Taylor county, Wisconsin. Will consider in exchange $3,500 of first-class city property, balance $3,000 on time at five per cent, or will rent for cash to good party. L. A. Kimball, Lake Geneva, Wisconsin.

GET a farm home in rich corn and clover belt of Northwestern Wisconsin along new Soo Line, 50 miles St. Paul-Minneapolis. Landseekers all say: "I saw nothing better." You'll like this wonderfully prosperous stock and dairy region too. Rich soils, hardwood timber, plenty rainfall, healthful climate, beautiful lakes, fine schools. Creameries everywhere. $15 per acre and up. Map and list free. Baker N-110, St. Croix Falls, Wis.

LANDOLOGY, a magazine giving the facts in regard to the land situation. Three months' subscription, FREE. If for a home or as an investment you are thinking of buying good farm lands, simply write me a letter and say, "Mail me LANDOLOGY and all particulars FREE." Address Editor, Landology, Skidmore Land Co., 310 Skidmore Bldg., Marinette, Wis.

HERE IS YOUR CHANCE—Get a home; $1.00 per acre down and long time on balance. Hardwood timber land with timber enough to pay for the land and build your buildings, close to market, school and cheese factories. Clay loam soil all tillable. Taylor Co., the clover and dairy belt of Wis. Rib River Land Co., Medford, Wisconsin.

DON'T buy Wisconsin Land till you have seen ours. We own 20,000 acres choice clay loam, hardwood lands on the Omaha & Soo roads. Close to towns, schools and churches. R. F. D. and telephone lines. Near, beautiful lakes and streams. Lowest prices—Easiest terms. Agents wanted. Upper Wisconsin Land Company, Ladysmith, Wis.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

YOU'LL be old some day. Are you looking ahead? You will want a Bank Account then. The sure way to provide for this is to secure an Aitkin County Dairy Farm. It will cost little, if you act right away. Write for maps and facts Arnold, Land Agent, Rock Island Railway, 153 Wolvin Bldg., Duluth, Minn.

To Soften Hard Water.

We have a letter from one of our subscribers, Mrs. Loose, who says:

Can you please let us know what will make hard water soft for laundry purposes? We have had no rain water and the snow is dirty and hard to melt. Some of our neighbors are in the same circumstances and would be glad to know how to soften the water. I read a recipe somewhere using lime, soda and borax, but I have forgotten the proportions.

Softening solutions may be made of washing soda, lye or borax, and any one of them is good. The soda solution is made by dissolving one pound of washing soda in one quart of boiling water. The advantage of this solution is that a large quantity may be made and bottled and kept on hand. It is a good cleansing agent. Use two tablespoonfuls of this solution for each gallon of water.

Lye may be used in the proportion of one-fourth teaspoonful to each gallon of water. Dissolve the lye in a cup of water before adding to the water.

The borax solution should always be used to soften the water in which wool is to be washed. For each gallon of water use one teaspoonful of borax dissolved in one cup of water.

Of course, there is a great deal of difference in water, and these amounts should be varied in accordance with the water. If iron occurs in the water it will cause the clothing to have a yellow tinge. To get rid of the iron, add washing soda to the water, let it stand for five or six days, then draw off the top and the remainder is ready to use. Organic matter, such as decomposing vegetable or animal matter, may be removed by adding one tablespoonful of a mixture of two parts borax and one part alum for each gallon of water.

Rules For Salad Making.

In early days the salad consisted merely of a dish of green herbs or vegetables served with a single dressing of vinegar and condiments, but the American salad of today is a mixture of meat, fish, poultry, fruit, or vegetables, and the methods of combining are so numerous that they are limited only by the ingenuity of the cook. However, there are a few rules to which all salads should conform:

The materials used must be fresh, clean, dry, cool and crisp.

They should be cut in symmetrical shapes or in small, irregular bits. Fruits and vegetables are usually cut in cubes or slices, while meat and fish are shredded, chopped, or cut in small pieces.

Meats and some cooked vegetables are marinated before they are put into salad. This means that they are mixed with some of the oil and acid and allowed to stand in the ice box for some time that they may absorb the flavor.

The green vegetables used for garnish should be arranged just before serving. All green salads should be combined at last moment before serving, and then should be tossed together (not mixed) with a dressing so perfectly blended that it is neither oily nor acid.

Perhaps the most delicious and wholesome dressing is the mayonnaise, for which the following recipe has been found most successful:

One teaspoon of salt, one-half teaspoon of mustard, one-eighth teaspoon of cayenne, one tablespoon of sugar, one tablespoon of lemon juice, one tablespoon of vinegar, one egg yolk, one cup of olive oil or cooking oil.

Put the egg yolk into a cold bowl, add the seasonings and mix until smooth, then add the oil, one drop at a time, stirring constantly. As it thickens, thin with a few drops of vinegar and lemon juice. Continue this until all of the vinegar and oil have been added. A half cup of thick cream or stiffly beaten egg white may be folded in just before serving. If the dressing curdles in making, add the curdle mixture slowly to a fresh yolk. Keep the dressing in a cold place until ready to serve.

Any good brand of cottonseed oil may be used in place of olive oil. It is less expensive and many people find its flavor more acceptable. An excellent dressing can be made by mixing one-third cup of olive oil and two-thirds cup of Wesson oil.—Carrie Swift.

The Housewife's First Aid.

THE kitchen that was planned with a shortage of built-in cupboard room may be made convenient by installing a good kitchen cabinet. Such a cabinet combines pantry, work table and utensil closet, working materials being within easy reach and properly used only occasionally, but for the general work of the kitchen it cannot take the place of a cabinet. No woman who has ever done her work with the aid of a kitchen cabinet would think of doing without it unless she could have its equivalent

prompt. The up-to-date cabinets contain flour bin and sugar receptacle in addition to cupboard space for pots and pans, spices, salt, cereals and, in fact, everything used in preparing a meal, [illegible] for various dishes for various meals and ample table room for the preparation of food. The woman who is short of cabinet room or who must make unnecessary trips from pantry to work table when preparing a meal should place a kitchen cabinet the next convenience to be installed in her home.

The pantry, where there is no basement storeroom, may be used for storing fruit and for such utensils as are in cupboards, drawers, stoves, [illegible] as a permanent part of the [illegible] farm women who are [illegible] spend a great deal of her time in the kitchen is always on the alert for ways and means of lessening her labors and reducing the number of steps she is obliged to take each day. For her the kitchen cabinet helps solve the problem, and if she adds to this a high stool so that she may sit at many of her tasks she will find that meals are prepared quicker and easier so that time and energy are saved and she will not so much dread the never-ending round of cooking and dishwashing.

Wants Advice on Canning Peas.

To the Editor:—I am a young farm woman and this is my third year farming with my husband. I want to get the advice of some more experienced housekeepers.

The land where we live is new and peas grow wonderfully well. Last year some of the pods were from four to five inches long. We always have good crops. Now, I would like to ask some of the readers how to can peas so as to have them for winter use. I have asked some of my friends, but they do not know how. They told me that they canned some sweet corn, but the jars bursted and the corn spoiled in a short time. They think the peas would do the same thing. Won't someone who has had experience tell me how I can can peas? Can I use Mason jars, or will they keep better in some other kind of jar? I know lots of people do can them, and if I could have the advice of someone who has had experience with them I would try it myself this year.

Mrs. J. S.

Strong Brine For Fish.

To the Editor:—I am sending you our method of salting fish. We usually salt down about fifteen gallons for summer use. The fish can be used either frozen or not frozen. Clean them and salt well, leaving the salt on for twenty-four to thirty-six hours. Then wash the fish, put them in a stone jar or a wooden keg and pour a strong brine over them. I have kept fish this way until the 17th of July, and the last was just as good as when it was put down.

When using the fish, take them out of the brine, wash them and soak in separated milk. That will make them nice and brown when they are fried.

A Friend.

Long Experience Salting Fish.

To the Editor:—I saw a letter asking if frozen fish could be salted for

summer use. The first question is: "Has this party his own fish, or will he buy frozen stock?" It is a waste of time to salt fish for summer use unless you have the right kind of stock. If you have good, fresh, frozen herring, they will be all right to salt.

Use fifteen pounds of salt to 100 pounds of fish. Before salting them, clean and wash thoroughly. After washing, lay the fish on something to drain; then salt them by rolling each fish in the salt. Be sure to use fully the amount of salt stated. After salting, make a strong brine to cover them, and be sure that they are all covered well.

Forty Years in the Fish Game.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for March 25, 1917.

Jesus the Way, Truth and Life.

(Review.)

SCRIPTURE LESSON—Read John 14:1-14.

GOLDEN TEXT—Jesus saith unto him, I am the way, the truth, and the life, no man cometh unto the father, but by me.—John 14:6.

The purpose of John's gospel is revealed in John 20:31. It was to prove that Jesus is the Christ, the Son of God, and to prove it in such a way that men might believe it in their hearts, and thus obtain, through that belief, eternal life in his name. Therefore, the best method of review for the lessons of the past quarter would be to go over the lessons one by one, and find out how it is that this great truth, which brings life to men, is illustrated in each of the several lessons. The object of such a review should be to make Jesus as real to us as if we were with him and his disciples, and could realize that the Word is now dwelling among us, full of grace and truth, giving daily of his fulness and "grace for grace." (Ch. 1:14-16.) Jesus is "the way," the way to heaven, the way to all that is highest and best on earth, the way of life, the way to the Father, the goal of all human aspirations, the way out of all human darkness and sin. The way to holiness and to God. Jesus is also the truth, the revealed truth about God. He revealed the forgiveness of God for the sins of men, the right way of living. Jesus is the life, the source of life, the life itself, the true life here on earth, and the eternal life which is to abide forever.

Lesson I. Jesus, the Life and Light of Men. This is the central truth of the gospel. Note the preëxistence of Jesus Christ as the eternal Word, "In the beginning with God." Then again we see it as plainly showing forth or declaring him to be God. We see him also as the Creator of all things.

Lesson II. John the Baptist. This is a lesson of John's testimony to Jesus as the Son of God; also that Jesus was the Lamb of God, eternal, preëxistent, the One who was baptized by the Holy Ghost, showing us the real nature of Jesus as the Word of God. Describe who and what he was and did that made him the perfect Savior.

Lesson III. The First Disciples of Jesus. Andrew and Philip discovered the Messiah of whom Moses and the prophets did write, and revealed him unto Nathaniel, who discovered in Jesus the Son of God and the King of Israel. Relate how Jesus found these disciples, their names and their characteristics, and why each one was especially fitted for his particular work.

Lesson IV. His Father's House. Jesus, manifesting himself as the Son of God, the Father, was the Ruler of God's house, and drove from it those who defiled it by making that house a house of merchandise.

Lesson V. The Savior of the World. Jesus, as the only begotten Son of God, can give eternal life to those who believe on him. Describe the character of Nicodemus, what it means to be born again, and what is meant by being born of water and of the spirit.

Lesson VI. The Woman of Samaria. Jesus declared himself to this woman as the Christ, and also as the giver of eternal life; therefore, he was God. Referring to the last lesson, emphasize what Jesus meant by his reference to Moses and the brazen serpent, and bring out the fact that the water of which he speaks is the gift of everlasting life.

Lesson VII. The Nobleman's Son. Jesus made his glory to be seen a second time in Cana of Galilee by healing sickness although not present at the bedside of the sick one. Healing and faith are copartners.

Lesson VIII. The Pool of Bethesda. Again Jesus manifests his power by healing by his bare word the man who had been infirm thirty and eight years, and who was utterly helpless and hopeless. Bring out how the man showed his faith. Explain why Jesus should say to him: "Sin no more lest a worse thing befall thee."

Lesson IX. Five Thousand Fed. Divine power multiplying the loaves and fishes, and divine prudence in assembling the fragments reveals the unquestionable, creative act of the power of Jesus Christ as perhaps none other of his miracles. Emphasize the part which the boy played in coöperating with Christ.

Lesson X. The Bread of Life. Jesus is the Bread of Life as well as the giver of everlasting life. He is the Bread of Life which cometh down from heaven, and the one going to whom we shall never hunger nor thirst.

Lesson XI. Jesus Saves From Sin. Jesus, the Light of the World, has power to set men free from sin, and "whom the Son shall make free is free in-

The New Hired Hand!

—the farmer needs good help in the fields. His wife needs good help in the kitchen. Her important duty is to make the best bakings. Her most important helper is Baking Powder.

If she tries Calumet she'll stick to it. Its dependability and uniform quality means good-bye to bake-day failures.

The farmer's wife wants the *most* of the *best* for her money. That's why most of them use Calumet. It's pure in the can and pure in the baking.

Does a Majority Opinion Justify Confiscation?

SOME people do not care for tea or coffee. Some are violently opposed to them as beverages. But, millions *do* use tea and coffee daily. Suppose opinion *against* coffee and tea should become greater than opinion in *favor of* tea and coffee. Would the majority against tea and coffee have the right to take away or destroy the value of the stores, the roasting establishments, the packing plants and other property belonging to the tea and coffee industry?

Not without Compensation.

* * * * * *

Thousands of men do not use tobacco—do not care for it. Some are so radical as to consider the use of tobacco almost a crime. But millions *do* use and enjoy tobacco. Suppose opinion should be reversed. Would the multitude *against* tobacco be justified in taking away or destroying the value of the property belonging to those who use and enjoy tobacco?

Not without Compensation.

* * * * * *

A large number of people do not believe in the use of medicine of any kind. Yet thousands of kinds of medicines *are used* daily by the world's untold millions. Suppose the anti-drug faction should become stronger in numbers than those in favor of the use of medicines. Would those *opposed* to medicines have the right to confiscate or destroy the value of the drug stores and other property belonging to those who have faith in medical preparations?

Not without Compensation.

* * * * * *

Certain classes of people, generally known as vegetarians, are opposed to the eating of meat. By far the greater proportion of the world's population *does* eat meat and enjoy its benefits. But, suppose the majority opinion should be *against* the use of meat. Would the oppositionists have any moral or legal right to take away or *destroy* the retail markets, packing establishments and other property owned by those engaged in the meat industry? *Not without Compensation.*

* * * * * *

Some people are opposed to the use of pork as a food, others object to oysters; still others oppose the use of this or that or the other thing. Suppose the *minority* opinion in any specific case became *majority* opinion. Would the majority have the right to take away the business or destroy the property of the minority? No! A thousand times NO! *Not without Compensation.*

* * * * * *

The law may take away or destroy that which exists in *violation* of law; but the law cannot *rightfully* destroy that which exists within the law, has been fostered by the law, and has contributed an enormous percentage of taxes to support the government and the law.

Not without Compensation.

The Brewers of Wisconsin

Duroc Futurity at County Fair.

The National Duroc Jersey Record Association has inaugurated the policy of establishing a futurity class at district fairs. A case in point is the Mills County Agricultural Society which holds its annual fair at Melbourne, Iowa. This year the record association has agreed to contribute $150 in cash, to be paid to exhibitors in the under six months pig class, the fair association being required to contribute $50, thus making a purse of $200. There is this stipulation that ten breeders must nominate their herds and pay an entry fee of $5 each. Mr. G. H. White, of Melbourne, Iowa, is secretary of this fair and in a recent communication he states that there were 150 pure-bred Durocs at the fair last year and it is the hope to greatly enlarge the number. An attempt will be made also to hold futurity classes for the Chester Whites, the Hampshires and the Polands. Those who are interested in any of these breeds should establish communication with Mr. White in view of encouraging him and the society in the splendid work which they have undertaken.

Uses Four Poles For Stack.

To the Editor:—I will tell you what I think of placing poles for a stack. I think four poles is best. I would advise four-pole cable outfit. Poles should not be less than thirty-two feet long and 5x5 thick. For extra long stacks 6x6 maybe would be better.

For cable I would use wire hoisting rope three-fourths inch and galvanized. This cable is quite expensive, but will never break. Common cable, which many use, can be had for half the price. This cable is made of seven wires and is quite stiff and can't stand the bending like the other.

The distance between the end poles can be from fifty to seventy-five feet or longer. This depends on how much hay the farmer has. The cable running from top of poles to anchor post should be sixty feet long on both ends. For small stacks fifty feet will do. The cable should be all in one piece. You will have to use a cable carrier. I judge that an outfit like this can be had for $30. If this outfit is set up right it will work like a hay fork in the barn. If a man wants to stack his hay around the yard this is the outfit. I have used one for the last five years and it has never given us any trouble. Otto Kroeger.

Farm Tenant and Crops.

To the Editor:—I have just been reading the article in your splendid paper entitled "Share Rent Fair For Both Parties," which I think is right. Mr. Wingert's plan is a good one, only rent is not as high here as it is in Iowa. However, I do not agree with you in your statement that the landowner should have the privilege of determining the character of the rotation unless the tenant is inexperienced in farming, as the tenant does all the work and bears all the expenses of all grain crops. I think he should have the privilege of determining the character of rotation because he knows what crops are the most profitable for him, and if he wants any land seeded down he usually knows where the land needs it most. My landlord is going to seed down some land this spring and he is letting me use my judgment as to the land that is to be seeded. I am a renter and have been on this farm three years and have it for the coming year. I give one-third of all crops delivered at the nearest elevator, and cash rent for pasture and hay. A Subscriber.

McCook Co., South Dakota.

The failure of many grain companies is threatened because of car famine. It is feared that at least 6,000,000 bushels of corn stored in Chicago will germinate and swell unless it can be moved in the immediate future. So serious has the situation become that some shipping firms loaded cars last week in defiance of the Interstate Commerce Commission's orders. Most of the firms are under contract to deliver grain to the eastern markets and they cannot collect unless such deliveries are made. Hence they are facing bankruptcy in the near future.

ADVERTISEMENT.

BETTER PRICES BROADER MARKETS

Part Played in Problem by Transportation--National Treatment for a National Enterprise.

IN every part of the country the farmers are turning their attention to questions relating to the handling of their products after they leave the farm. Transportation is a part of this problem. The cost of reaching their markets and the ability to reach them promptly at the right time are important factors in determining the returns from their crops.

Low Freight Rates

Fortunately the American farmer has at his command the lowest freight rates in the world. It costs no more to move a load of wheat 500 miles by rail than it does to haul it five miles from farm to station by team. A ton of farm produce of any kind can travel almost twice as far for the same charge on American railroads as on the government-owned roads of other lands.

The cheapness of transportation is not the whole issue. To meet the needs of the farmer transportation facilities must be ample. There must be plenty of tracks and cars and locomotives and sufficient terminals.

Billion a Year Needed

The railroads are anxious to provide means to take care of all the business they can obtain. But a vast outlay of money is required. A billion and a quarter dollars a year for the next ten years or more must go into railroads to provide the necessary transportation facilities.

During the past few years it has become more and more difficult to obtain even in part, the money required for this purpose. This has been due partly to the poor promise of a satisfactory return on the investment; partly to the uncertainty created by numerous and conflicting regulations.

Regulate For All the People

Nobody seriously proposes that the public regulation of railroads shall be weakened. Certainly the railroads themselves do not. But it is a reasonable proposal that the regulation of this great national business should be handled by national agencies, on national lines, in the interest of all the people, and not by local agencies to serve local or sectional ends.

Regulation at cross purposes by 49 masters—48 states and the federal government—now imposes upon the railroads an annual burden of many millions of dollars of wasteful expense, from which the public derives no benefit. It is of primary importance to the farmer to cut down this waste in order that his products may be moved to market at the least expense and with the greatest possible expedition.

The farmer's interest demands free trade among the states.

Note These Feed Costs

Wheat—oats—bran mean nothing, except as a means to an end. What is really needed is protein, fat and carbohydrates. In your silage and hay you have an abundant supply of fat and carbohydrates, but these crops are lacking in protein. Protein must be bought, or you must feed your valuable grain. You cannot afford to feed grain at present prices. You cannot afford to use grain concentrates. For each pound of protein today costs as follows—in corn 26c—in oats 24c—in bran 15c—in middlings 13c—in cotton seed meal 6c. Cotton seed meal supplies protein at half the cost of other feeds.

Note These Manure Values

Cotton seed meal is often used as a fertilizer. It is rich in Nitrogen, Phosphoric Acid and Potash. At present fertilizer prices it is worth $48 per ton. Feed it and 80 per cent of this fertilizing value is retained in the manure. The manure is actually worth $38 per ton today. (22)

At the average fertilizer price the manure is worth $25 per ton, as compared with $7 per ton from oat-fed stock and $6 from stock fed on corn.

Write today for our valuable book of feeding formulas, written by a practical farmer, telling what Experiment Stations and authorities everywhere say about cotton seed meal. Address nearest office.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Probably Cholera.

I have about seventy-five head of hogs. About the latter part of November one of the shoats died in the feed lot. I had a veterinarian examine this hog and he did not find anything, but thought it died from bloat. About a month later another hog was found dead in the hog house. The rest were all well for a few days and then suddenly stopped eating. I called the veterinarian and this time he said it was pneumonia, but the hogs did not cough any. We tried them on medicine for a few days, but they would not take it at all. About three days later we vaccinated by the single treatment. At that time about twelve head had died. We vaccinated sixty head and thirty-six of them died. Some of them seemed to hold out for two weeks or so, some having diarrhea and some not, all were weak in the hind quarters. They cough some now and breathe hard and drink lots of water. I would like to know if it would be all right to keep any that get well.

Your hogs may have had some pneumonia, but a pretty safe guess is that most of them had cholera. Of course, you would be very apt to lose a great many of them if they were sick even if you did vaccinate. It will be all right to use any of the sows that pull through the trouble all right.

Ringworm.

I have thirty-one head of calves that are six months old. They have a white scab all over them, mostly around the nose. I also have thirteen cows the same way. Could you tell me what to do for this trouble?

Your cattle are probably troubled with ringworm. It usually takes six weeks to three months to effect a cure, but a cure can usually be brought about with a persistent line of treatment. The hard crusts should be softened with soft soap and lard, equal parts. In case of an extensive eruption creolin oil (1 to 20) is most suitable. Leave the oil on from two to four days and then remove the softened scabs with fomentations. After the hard scabs have been removed an ointment such as salicylic ointment or ointments of tar, creosote (1 to 10). In mild cases daily painting with tincture of iodine slightly diluted with alcohol is good. During treatment endeavor to prevent animals from rubbing. Keep stables clean.

Abortion.

Please tell me how to get rid of abortion in cattle. Is it catching by dogs carrying a piece of the affected flesh or bone into the yard where cattle are allowed to run with the rest of the herd?

Abortion is best abolished by the disinfectant route. Remove those affected from those not affected. Burn all dead calves and discharges from those affected. Clean and disinfect quarters. Get some good veterinarian to help you start on the disinfecting and to teach you how to use antiseptics in flushing out vaginas of those affected. Clean and disinfect the sheath of the male before and after service. It is bad for dogs to carry portions of calves dead through abortion of mother. It should not be allowed. Do not let those affected run with those not affected.

I am having trouble with my cows losing their calves when they are about three or four months old. I am feeding them wild hay, oats straw and corn fodder. Do you think the feed has anything to do with it? What treatment can I give them to stop it?

We take it from your letter that abortion is present in your herd. That being so, it is either infectious or noninfectious. We would advise you to have a veterinarian examine your herd and also the water and food supply. If he thinks it infectious we would advise you to dispose of your herd, not to neighbors but on the market, or else start the disinfectant treatment, and you should be started off with this by a veterinarian. Keep those that have aborted from those that have not. Clean and disinfect premises.

Ask your neighbor to subscribe for The Wisconsin Farmer.

Break up the stumps with Farm Powder

A *pulled* stump is hard to handle. Getting rid of it is just as big a job as the pulling. *Blast* it out and you can carry it away like firewood. "Most stump pulling machines are too expensive and unwieldy," says U. S. Farmers' Bulletin No. 150. Use

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

and save money, time and labor. Punch a hole under the stump, load, fire, and the job is *done!* The shattered roots come out free of earth, the soil is loosened for yards around—ideal for crops.

Atlas Farm Powder is made especially for farm use. It is the cheapest farm hand for blasting stumps and boulders, digging ditches and many other kinds of work. Sold by dealers near you.

Send for "Better Farming" Book—FREE
"Better Farming" (illustrated) tells how you can grow bigger crops by blasting the subsoil, how you can bring orchards into bearing two years earlier, and how Atlas Farm Powder replaces expensive labor. Sent free for Coupon.

On Dry Feed

Nature takes care of the horse when he is on grass. But your horses are stabled and fed dry feed—dry hay, oats, corn, chop feed. That's the cause of constipation and stoppage of bowels—mighty serious horse troubles. Keep the bowels regular, the blood circulating, the digestion good by using

Dr. DAVID ROBERTS' PHYSIC BALL and HORSE TONIC

They make *grass conditions* for horses. One Physic Ball equals a month of grass. Kidney, blood and liver are all kept in order by Horse Tonic. Your horses will not have shaggy coats, stocky legs, worms or be hide bound.

Colic Drench a great colic medicine—should be in every stable. Stimulates the paralyzed bowels, prevents distention, does away with wind colic.

Fever Paste approved medicine for Distemper, Fevers, Colds. Acts upon the inflamed membranes of the throat and overcomes germs of disease.

Special Sample Offer
STOKVIGOR, 10c

Enough to feed a horse or a cow two weeks. Aids digestion, tones the system, makes animals grow and develop better. Send 10c for Special Sample Package and test on your own stock. Don't fail—don't wait. Enclose dime or stamps.

Go to your own druggist for Dr. Roberts' Live Stock Prescriptions. If not there, send us his name and we will see you are supplied. Nearly 4000 dealers in U. S. Send 25c for Dr. Roberts' 184-page "Practical Home Veterinarian," treating all diseases of all live stock. Address

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Pay Streak and Wm. F. Butts.

WM. T. BUTTS, Evansville, Wis., has the distinction of being one of the best Chester White breeders in the state, and he has gained this reputation by buying good Chesters and giving them the proper care. His herd was established some eight years ago and some new blood has been added each year. The following boars have been represented in this herd: Modeler, Lewis R., St. Elmo, Chief Keokuk, Wonder, Col. Kent, White Rock and Perfection King. At the present time Pay Streak is the big noise in this herd. He was second-prize junior yearling boar at Milwaukee last year and is a good individual in every respect. We never saw a boar with better feet. He is sired by the noted Hinshaw and out of a daughter of Callaway's Choice. Mr. Butts has just purchased a fall (1916) boar that we like very much. He has extreme length, excellent feet and pasterns, a good head and ear, nice spring of rib and with proper care we believe he will be big at maturity. His breeding is most popular, being sired by Izzy O. K. Wonder, grand champion at Kansas and Nebraska, first at Des Moines and second at Omaha. His dam is Juanita O. K. Again, the dam of the Satre boar, Combination Defender, for which $1,000 has been refused. Keep your eye on this young boar, for if he continues to do well he will make a wonderful showing at the fair this fall. Mr. Butts will have some fine pigs to ship at weaning time and if you are going to want one, a pair or a trio you had better get your order in early. His advertisement appears in this issue. See page 24.—Adv.

Strong-Germinating Alfalfa Seed.

ALFALFA is a money-making crop for the northern farmer. Three crops of splendid hay can be cut each season, and a failure seldom occurs when the right seed is used. This matter of seed, however, is of utmost importance, because poor, weak seed, containing noxious weeds will not produce good alfalfa. Olds alfalfa seed is a brand that may be depended upon to produce strong, sturdy plants; It possesses strong germinating power according to actual tests and is free from all weed seed. There are seven stocks of Olds alfalfa: Fancy Montana, Fancy Dakota, Fancy Idaho, Fancy Nebraska, Fancy Nevada, Fancy Kansas and Genuine Grimm alfalfa. Samples of seed from these stocks and records of tests will be sent free to readers of this paper. In addition Olds' 1917 seed book will be sent free on request. It contains 96 pages of illustrations and descriptions of all kinds of farm, garden and flower seeds. See page 11 and write for samples and seed book today, addressing L. L. Olds Seed Company, Drawer 7, Madison, Wis. See page 11.—Adv.

Do You Want Short-horns?

IF YOU are interested in Short-horns, Scotch, Scotch-topped or straight Bates cattle, you can find them in Rock county, Wis., and for information you should write to J. E. Kennedy, secretary, Rock County Short-horn Breeders' Association, Janesville. Rock county is full of good Short-horn cattle, in fact we believe there are more registered Short-horns in Rock county than in any other county in the state. Prospective buyers can find what they want in this county, for they will have a large number to select from. Write Mr. Kennedy your wants and he will tell you how many cattle can be had at this time. Please mention The Wisconsin Farmer. See page 25.—Adv.

Breeding Short-horns Forty-six Years.

A MAN that can stay in the cattle business 46 years must be on the square or he would be put out of business. Kiser Bros., Oregon, Wis., have been breeding Short-horn cattle continually for 46 years. They are known wherever Short-horns are talked in this state and at this time it is wasted energy for us to say anything about these gentlemen other than to advise that they have on hand a nice lot of young bulls. We recently saw these bulls and we fell confident that they will please you. If interested write, mentioning this paper. See page 25.—Adv.

Some Classy Holsteins.

JUST at this time Kirkpatrick Bros., Reedsburg, Wis., are offering some cows and heifers and an outstanding bull. The cows and heifers are well bred and are safe in calf to a Pontiac bull, one of the best of the strain in the state. The bull is a 24-pound, 16 months old fellow that is absolutely right in every way and suitable to head a high-class herd of cattle. Write the above firm. They'll treat you right. See page 27.—Adv.

Orion Col. S.

GET acquainted with the above title, for it is the name of a Duroc Jersey boar that will be heard from. He is owned by W. C. Jenkins, Bangor, Wis., and is a big-type boar in every respect. His sire, Col. S. Jr., is the noted Johnson boar, one of the best that ever did service in Ohio. His dam, Opal Orion, is a big, deep sow and a wonderful breeding matron. She is by that great sow sire, Orion Chief. Mr. Jenkins hopes to have about 75 spring pigs sired by Orion Col. S. and they will be from good dams. Keep your eye on this big boar—he is one of the best in the state.—Adv.

Important Holstein Dispersion.

ON April 6th and 7th, the entire Stephenson Farm herd of Holsteins will be dispersed at Lake Mills, Wis. This offering is of such merit and has made such records that this sale should attract the best of breeders from all parts of the United States. There will be 11 cows with over 800-pound records and they are all young and in their prime. Of the 175 head to be sold, only 30 are over five years of age. Included are 116 descendants of Admiral Prilly 72923, the senior herd sire that has 25 tested daughters. Of these, 11 average over 800 pounds for the year. There are 40 sons and daughters fo King Walker Pietertje Segis 127857, the junior herd sire, whose first 13 dams average 30.07 pounds. He is a grandson of King Segis. Over half of the cows will be well along in calf to this great bull. Those contemplating the purchase of Holsteins should send for a catalog and study the breeding and records of this herd. The cattle to be sold are backed up by a line of ancestors with excellent records and anyone who buys a bull or some females in this sale need have no fear of their producing or breeding ability. See page 26 and write for catalog, mentioning The Wisconsin Farmer.—Adv.

Solve the Power Problem With a Heider.

FOR the farmer who has a power problem to solve the Heider tractor will prove a profitable investment. It is an all-purpose engine, capable of pulling a plow, running a thresher or feed grinder, hauling loads and doing numerous other tasks. The Heider is especially economical to operate and will run with entire satisfaction on either kerosene or gasoline. The famous Heider friction transmission eliminates a number of gears and their attendant troubles. If you are going to be in the market for a tractor, get the Heider catalog and look it over carefully. It will give you some valuable suggestions about tractor buying. Write for it at once to the Rock Island Plow Co., Rock Island, Ill., and mention this paper in order to get a prompt reply.—Adv.

E.-B. Cultivators and Other Farm Tools.

THE E.-B. cultivator is known to do absolutely satisfactory work and is very easy to operate. An important feature is the foot control which does away with levers. The gangs are very easily managed and there is little strain on horses' necks. Quick adjustment of the wheels balances the weight of the operator, whether he is heavy or light. Other important features of the E.-B. cultivator are telescope axles, broad, concave wheel tires and long distance magazine wheel boxes. This tool is made in different types to suit every kind of soil. If you will need a cultivator don't fail to learn about this one. Get a catalog now, while you are thinking of it—all you need to do is to fill in the coupon in the advertisement on page 6 and mail to the Emerson-Brantingham Implement Co. (Inc.) 37 W. Iron St., Rockford, Ill. If you are interested in other farm implements also, make a check beside their names on the coupon.—Adv.

Fisher Adds More Good Blood.

WE have just been advised that John L. Fisher, Janesville, Wis., has purchased a daughter of the noted Thos. Johnson boar, Col. High Chief. She is a well-bred sow, being out of a granddaughter of The Professor and Volunteer and her sire is by High Chief by the one and only Ohio Chief. She is bred to the International champion, Oakland Orion Cherry King. Mr. Fisher has also purchased a daughter of The Professor one of the best sons of Ohio Chief and she is bred to Cherry Chief's Wonder, the sire of the $1,500 champion, Tommy Doyle. Fisher will have some litters to make a noise about a little later, other than those sired by his own grand champion boar, King Defender. He is offering a King the Col. boar out of a litter sister to Lee's Defender—if interested write. Keep this herd in mind. See page 24.—Adv.

Serviceable, Attractive Silos.

MINNEAPOLIS panel silos are serviceable and economical, yet they will add attractiveness and beauty to any farm. They are built of steel and wood in such a way that there is absolutely no danger of their collapsing or blowing down. The shiplap, drop-sided, paneled walls have dry seams and joints always, which mean long life and freedom from rot and deterioration. Send for catalog of this valuable silo, addressing the Puffer-Hubbard Mfg. Co., 3205 26th St., Minneapolis, Minn. See page 13.—Adv.

Jones' Short-horns.

EBEN E. JONES, Rockland, Wis., breeds Scotch and Scotch-topped Short-horn cattle and if you want bulls or females that are right it will pay you to write him for further particulars. He has had good bulls doing service in his herd and the young stuff that he has for sale are characteristic of the breed. Mention this publication when writing. See page 25.—Adv.

Northern-Grown Seeds Are Popular.

THE hardy, northern-grown seeds of the John A. Salzer Seed Co., Box 123, La Crosse, Wis., are popular all over the country, because they are known to produce strong, healthy plants. This company has specialized in adapting seeds to suit different conditions and has won an enviable reputation in this work. Their big 1917 catalog tells of their seeds and is brimful of other agricultural information besides. It is a valuable book and one that every gardener, farmer or orchardist should have. It will be sent free on request, together with any samples of field seed that you are interested in. Send for this catalog at once, using the address given above. The advertisement appeared in last week's issue on page 14.—Adv.

Land Clearing Made Easy and Profitable.

THE Kirstin stump puller will prove an excellent investment for the farmer who has stump land on his farm. This land is usually very rich in plant food and will produce abundant crops if properly cleared. The Kirstin stump puller provides means of clearing such land at a small cost. It is a one-man outfit, requires no horses and works quickly and easily. The A. J. Kirstin Company, 6549 Ludington St., Escanaba, Mich., have issued a book called, "The Gold in Your Stump Land," which explains the Kirstin method and if you are interested in this subject you should send for this book without deday. The advertisement appeared on page 10 of last week's issue.—Adv.

The Substantial Beaver Silo.

THE success of the silo has been proved beyond doubt. It is practically an essential to profitable stock feeding. But the question is what kind to buy. On this question the advertisement of Beaver silos on page 13 will give some valuable suggestions. Beaver silos are sturdy and reliable; thousands of them have stood up under the severest storms which visit Wisconsin. All bracing is sound and secure, solid as a rock. There is no danger from swelling, shrinkage or collapsing. Write for illustrated description of this silo and also valuable table telling the size of silo to build for your number of live stock and size of farm. Address Beaver Silo & Mfg. Co., 417 High St., Beaver Dam, Wis.—Adv.

Angus Association Spring Bull Sale.

THE annual spring bull sale under the management of the American Aberdeen Angus Breeders' Association will be held this year at St. Joseph, Mo., April 24th; Omaha, Neb., April 25th; Sioux City, Iowa, April, 26th; East St. Louis, Ill., May 1st, and Chicago, Ill., May 2d. For these sales there has been listed in the neighborhood of 300 bulls, all in good shape, all tuberculin tested and all coming from reliable herds. A few females will be offered in some of the sales. Full particulars regarding these big sales will appear in later issues. Applications for catalogs should be filed with Sec. Charles Gray, 817 Exchange avenue, Chicago, Ill. Kindly mention this paper when you write.—Adv.

Short-horns That Are Good.

W. J. BERND, New Richmond, Wis., has a big herd of good Short-horn cattle. Not only is the herd large in numbers, but they are large individually, in fact we believe that Mr. Bernd has some of the largest cows owned by any one man, in the state. While they are big, they are not rough or leggy and they are excellent milkers. Good bulls, of prize-winning caliber head the herd and if you should make a trip to see this herd you will not be disappointed. New Richmond is just a short way from the twin cities and the shipping facilities are the very best. Write the owner for a description of his good cattle. See page 25.—Adv.

Free Subscription to Tractor News.

A FREE subscription to the Chicago Tractor News will be given to readers of this paper who are interested in power farming. Here is an opportunity to keep posted on the latest improvements and developments of this coming line. The information this publication contains will be valuable to any farmer. See the advertisement on page 2 of the Curtis Form-a-Tractor Company, 1001 Straus Building, Chicago, Ill., which explains the proposition. It will cost you nothing but the time required to fill in the coupon and mail it to the company. Send for your subscription today.—Adv.

Tulloch & Fries Have the Goods.

HAVE you written to Tulloch & Fries, Genoa, Wis., about those bulls they have for sale? If you want cheap bulls you can't do business with the above firm, but if you want to buy bulls on the basis of "where price and quality meet," they have the goods. The bulls they have for sale are by 32-pound sires and out of A. R. O. dams, but then you can't appreciate this herd unless you have seen them. Genoa is near La Crosse on the C., B. & Q. Take a trip and see one of the very best herds in western Wisconsin. If you want bulls that have a future write Tulloch & Fries. See page 27.—Adv.

Children Are Winning Ponies.

EVERY boy or girl has a chance to win a free pony. The famous Pony King is going to give away five beautiful Shetland ponies soon and every child who joins the Pony Club will have an equal chance with all the rest to win one of these ponies. Already 445 ponies have been given away to 445 boys and girls all over the United States. The picture here shows Victor Harris, of Ashland county, Wis., and his pony, "Jay," which was given to him by the Pony King not long ago. "Jay" is a very beautiful pony and one that has learned a number of tricks including shaking hands. He is one of the 445 ponies that were given away free to children of the Pony Club. It is very easy to join this club; any child can do so by writing his name on the coupon in the lower part of the advertisement on page 28 and mailing it to the Pony King. Parents can help their childen do this and thus give them a chance at the Pony King's generous offer. Every child should have a pony; ponies are inexpensive to keep and afford a great deal of pleasure. Children grow strong and healthy playing with them or driving about the country, and there is no harm or danger in the gentle Shetlands that the Pony King gives away. They are a continuous source of pleasure and enjoyment. Harold A. Pierce, Waushara county, Wis., sent his name to the Pony King and received a fine pony named "Sportsman." The pony has been taught to do 21 tricks, including rolling over, telling how old he is, standing on his hind feet and shaking hands. Harold claims he wouldn't be without his pony for anything. Cecelia Garot, of Kewaunee county, Wis., also received a pony from the Pony King. She wrote to the Pony King that she was delighted with her pony and that the people who came to see it declared that it was the sweetest little pony they had ever seen. Cecelia's pony is named "Crescent," and she says he is so gentle he will eat sugar right out of her hand. Many other boys and girls have won ponies from the Pony King. Among them are Victor Harris, of Ashland county, Wis.; Sheldon Adams and Alfred Hokenstad, of Dane county, and Pearl Kerr and Lawrence Fox, of Grant county. These children all know that the Pony King will do what he says. Children in families who read this paper have an especially good chance to win a pony if they send in their names at once, and any child or parent can learn all about the wonderful Pony King by writing to him, addressing the letter to the Pony King, 307 Webb Building, St. Paul, Minn., and asking for the free Pony Picture Circular. The circular has beautiful colored pictures of ponies on the Pony King's farm and it shows the Pony King playing with the children who live near him and come often to visit him and ride the ponies. It contains pictures of the five beautiful Shetland ponies that the Pony King is now ready to give away and tells all about them. They are gentle ponies and any child can have a wonderful lot of pleasure and enjoyment with one. Now is the time to join the pony club and be ready to win one of these fine ponies. The Pony King is a big-hearted, generous man and every child should write to him for this picture circular. Perhaps the quickest way is to fill in the coupon in the advertisement on the back page of this paper and mail to the Pony King at once.—Adv.

Cheap Wind Power on the Farm.

LET the wind pump your water for nothing." This is the suggestion made on page 10 by the Stover Manufacturing Co., 218 Samson Ave., Freeport, Ill. Wind power is indeed cheap and a good mill works untiringly and with very little attention. If you have to pump water, a windmill will save you labor and expense, providing it is the right kind of a mill. The Samson mill is the right kind, for it is dependable and efficient. The company named above will be glad to furnish you full

information on this windmill which is already used by farmers all over the country. Write for information today, and if you are interested in other farm machines also, state this fact in your letter.—Adv.

How Much is Your Stump Land Worth?

A SERIES of investigations has shown the stump land of America, if it were cleared and ready for cultivation, to be worth more than the average farmer's best paying land. But stump land in its loafer state is worth practically nothing as far as actual profits are concerned and in fact is a direct loss to its owner. Wasted energy is what some land experts call this loafer stump land and it's a good, true expression, too. When a man realizes the amount of good virgin soil going to waste year after year. Soil that should be working and bringing in dollars and cents. It is plain enough to see why loafer stump land is called "wasted energy." It is really a shame that progressive American farmers will permit virgin soil to loaf and especially in these high-priced times. Statistics back us when we say that your loafer stump land is the best virgin soil you have. It doesn't need fertilizer, because for years this soil has been accumulating leaf mold and decaying vegetation of all kinds. It is literally a gold mine. In this time of high food prices American farmers must utilize every bit of ground. If you have a stump patch clear it for cultivation, for crops and profits. Let high prices build your bank account. Put every acre you own to work and don't for one minute allow fertile soil to loaf because stumps make it impossible to cultivate. Pull out the stumps and get them out now. Your state agricultural station will gladly furnish you with any advice you may desire and if you wish the Hercules Mfg. Co., of Centerville, Iowa, manufacturers of the Hercules triple power stump puller, will gladly supply you with land-clearing information. You know there is wasted land lying in that stump pasture. Land that will pay you the biggest profits for years. Why let it stand idle every year, when you can clear it easily and in a short time? Get busy now and have it ready for this year's planting. See page 10.—Adv.

A Reliable Incubator.

THE National metal-covered incubator has made a lasting reputation for honest value and dependable service in the poultry world. A well-built, metal-covered machine of 165-egg capacity that has proven in past years to be a dependable hatcher in all kinds of weather. The National is built in but the one size, as the manufacturer has found it to be the popular size and the size that can be run most economically on the farm. Our readers are offered a 40 days' trial period which allows time for one hatch. It is a moderate-priced incubator selling for but $10 and the freight is prepaid. By writing to the National Incubator Company, Box 506, Racine, Wis., you may receive more details about this incubator also their 1917 book, "Notes On Poultry Raising," which contains much advice of value to all poultry raisers. See page 16.—Adv.

Big Hatches From the Ironclad Incubator.

THERE is money in operating an incubator like the Ironclad. It gets a high percentage of strong, sturdy chicks that will make good spring frys or broilers. The Ironclad incubator of 150-egg capacity is absolutely reliable, stanch and firm in every principle of construction; the insulation is of the highest type and the heating apparatus is thoroughly tested and adjusted. Full information is contained in the free catalog of the Ironclad Incubator Company, Box 113, Racine, Wis., but to save time you can order direct from the advertisement on page 14. Send in your order today.—Adv.

"Standard" Plumbing Fixtures.

ANYONE who intends to build or remodel his home, should get the new books of the Standard Sanitary Mfg. Co., Dept. 207, Pittsburg, Pa. They describe carefully the style and price of a wide variety of plumbing fixtures for the bathroom, kitchen and laundry. Standard fixtures are known by the green and gold label bearing the word "Standard." These fixtures will make a valuable and beautiful addition to your home. See the advertisement on page 18 and write for the book now. —Adv.

George Pagel's Duroc Sale.

Another successful Duroc Jersey sow sale was made by George W. Pagel at Zumbrota, Minn., February 26th. Thirty-six head were sold at an average of $63.57 and considering the fact that many of them were of late farrow and bred late, Mr. Pagel was very well satisfied with the outcome of his sale The top of this sale was a gilt that went to J. L. Schilling, Onalaska, Wis., at $110, and she was a good buy at that figure. Mr. Pagel's herd boar, H. C. Wonder, made a decided hit with the breeders in attendance and, as the pigs by this boar begin to show up we believe that he will be more appreciated. H. S. Allen sold the offering with his usual ability. We follow with the complete sale report: No. 1, J. L. Schilling, Onalaska, Wis., $107.50; 2, G. W. Hazelton, Racine, Minn., $67.50; 3, W. J. Otte, Randolph, Minn., $75; 4, Geo. Wolf, Goodhue, Minn., $62.50; 5, G. W. Hazelton, $75; 6, Herman Nibbe, Zumbro Falls, Minn., $65; 7, Herman Nibbe, $67.50; 8, W. J. Dack, Stanton, Minn., $65; 9, E. R. Emery, Stanton, Minn., $70; 10, C. E. Overby, Wanamingo, Minn., $75; 11, W. G. Holets, Wykoff, Minn., $50; 12, W. E. Peterson, Zumbrota, Minn., $70; 13, W. G. Holets, $85; 14, J. L. Schilling, $110; 15, Ed Patterson, Jr., Bridgeport, Wis., $67.50; 16, Young Bros., Mindoro, Wis., $65; 17, G. A. Benrud, Bellechester, Minn., $60; 18, Geo. E. Purver, Eyota, Minn., $55; 19, B. W. Whitney, Stanton, Minn., $52.50; 20, Geo. B. Johnson, Goodhue, Minn., $52.50; 21, E. R. Emery, $52.50; 22, Chas. Trutman, Hager City, Wis., $50; 23, C. P. Fisher, Owatonna, Minn., $50; 24, O. F. Henkel, Kenyon, Minn., $50; 25, Berg Bros., Welch, Minn., $60; 26, W. J. Dack, $55; 29, J. L. Gossard, Kasson, Minn., $62.50; 30, Geo. E. Purves, $55; 31, Cusick & Randal, Spring Valley, Minn., $55; 32, W. G. Holets, $55; 33, W. G. Holets, $57.50; 34, David McKegg, Stanton, Minn., $52.50; 35, F. S Vanderhyde, West Concord, Minn., $65; 40, Reuter Bros., Cannon Falls, Minn., $52.50; C. W. E. Peterson, $45. Total $2,270; average, $63.57.

WESTERN FUR & HIDE CO.
144 W. Kinzie St. Chicago, Illinois

FOR SALE AT A BARGAIN—A fine driving mare 8 years old, weight about 1,000 pounds. Colt 9 months old, a natural born pacer. This colt is perfect and is from fast stock. Cutter, buggy, cart, harness, etc., will go with this outfit. (Answer) in care of Wisconsin Farmer.

Union Stockyards, Chicago, Ill, March 17th.—The last fortnight has seen but a scant 80,000 cattle at Chicago and the lightest around-the-circle supply this year to date. Neither car shortage nor bullishness on the part of owners is responsible for the small marketing. The fact that beef scarcity confronts the nation and that beef cost, already high, must be marked up to meet advancing cost of cattle on foot. Within the past two weeks advances ranging from 75c@$1.25 have been shown on the bulk of the beef steers and some cattle are $1.50 higher than the "low spot" in February. Shortage is not to be disputed. It has shown up in somewhat acute form even earlier than forcasters expected. Premature marketing has been the rule all winter, making a bare spot logical. Heavy cattle sold up to $12.65 and a load of prime bullocks would have been eligible to a bid of $12.75. A $13 transaction cannot be long deferred. Packers are getting few decent dressed beef steers under $10.75. Cattle worth around $9.60 late in February went over at $10.85. Low hard pressed killers are for beef to fill contracts was indicated by a clamor for light trash at $7@8.

So many factors enter into the equation that forecasts at this high level of prices are impossible. The labor outlook is unpromising and high prices always arrest consumption. Educating the consumer to a new scale of retail prices at frequent intervals is difficult. The week's advance means another rise and further restricting of con mption. Present cattle values would be impossible but for scarcity, but there is no sign of relief, every possible supply source having been drained. Prices may not go much higher, but there will be no cheap cattle.

After touching a new high spot in trade history late last week, with a $15.10 top and $14.94 general average on Saturday, the hog market had a moderate and not illogical reaction the first half of this week, Wednesday's trade being 25@40c under Saturday. On Thursday and Friday, however, the market did a comeback stunt, the threatened railroad strike being a factor. The loss of the fore part of the week was regained, Friday producing a $15.10 top and a $14.92 average. Deficiency of tonnage, owing to the high cost of corn, is a factor not to be ignored in the hog trade. A load of 300-pound hogs at any western market is rare and eastern growers have adopted the policy of cashing at light weights—a logical one, as they are fearful of overstaying a good market and adverse to feeding dollar corn. There will be a fair run of hogs right along, but few in trade believe that receipts will be heavy enough to materially depress values.

Lambs are selling 10@20c lower than the high time last week late, but show 10@15c advances, in the main, from this week's bottom levels and appear to be headed higher. The wool market continues to advance and a 40 to 60-day period of light receipts of sheep and lambs lies just ahead. That prime lambs in the fleece will realize $ i this side of May is not improbable. Sheep and good yearlings are 10@25c higher than a week ago and at new record levels. In view of current high prices the following bit of sheep history is of interest. A number of sheep boiling plants, in which sheep carcasses were boiled down, principally for the tallow, were located at different points in Ohio in 1850. Two such plants locat d at Bellefontaine, Logan county, killed about 16,000 head annually, while at Cleveland several establishments slaughtered 16,000 head each. One report gives the following products returned from each sheep; tallow, eight pounds at 6¼c, 50 cents; two venison hams, seven pounds, at 4 cents, 28 cents; and pelt 75 cents, a total of $1.53. The tallow sold for considerably more than mutton.

Fat cattle values are mostly 25@50c higher than a week ago and at the highest altitude on record. The advance has put all really decent beef steers above the $10.75 line and much of the crop of fat steers this week has sold at $11@12.25. The $12.25@12.65 kinds of good to choice fat bullocks with an effective corn crib cross have had good action, steers at $12.50 being a kind selling two weeks back at $11.75. From $10.50 down only warmed-up light steers are to be found, the $10 grade being merely in fleshy feeder condition and under that line only cattle are now available that normally would be feeders and go back to the country without serious contention by killers. Everything with a pinch of beef on its ribs, wearing a hide and capable of bleeding, has been taken this week by killers, who made raids on the accumulation in yard traders' hands, taking even the $7 canner kind. This indicated that contracts are unfilled and that the time limit is in operation. Both quality and condition here this week have been the poorest in market history, steers dressing 55 to 56 per cent showing up in profusion. Difficulty in getting corn is putting cattle on the cars in many localities and the high price of trash is sending it to market.

Butcher cattle have advanced along with steers, most she stock being 25@40c higher than a week ago, bulls 10@25c up. In the canner trade only occasional hard shells are selling below $5.50, bulk of the fair to good canner cows making $5.75@6.15, while common to medium cutters sell at $6.25@6.60 and a good, strong, long-haired cutter kind upward to $7. Butcher cows selling below $7.40 are an ordinary light or dairy grade, $7.50@8.50 taking fair to good fat kinds and choice corn-feds going upward from $9. Prime heavy Kosher cows had value on up to $10.25 and better, a few having reached $10.75 in the mid-week session, but such are novelties in current marketings. Only trashy light heifer stuff went at $6.50 and under, killers getting few heifers of decent butcher quality below $7.65, while $8.50@9.25 was readily forthcoming for a medium to strictly good corny kind, choice, well-turned fat heifers going up to $10 and above and something of prime class having a quotable value to $11 and even higher.

Demand for stock and feeding cattle is slack, but strong killer call for anything that would bleed has forced stocker stuff up 10@15c and good weight feeders to 15@25c higher levels. Few country men have feed enough on hand to carry cattle through until grass and most of them balk at paying prevailing record prices for thin cattle on top of the high feed bill. Most of the medium to good stock and feeding steers are selling at $8@9, choice feeders up to $9.35@9.50 and even higher.

Hog receipts around the market circle showed some increase the first half of this week, the high prices prevailing at last week's closing prompting activity on the part of country shippers. The market declined 25@40c in three days from the high spot last Saturday, but the loss was recovered on Thursday and Friday. The advance carried the top back to $15.10, or 75c higher than Monday, March 5th, low day last week. Bulk of the supply here yesterday sold at $14.80@15. A good class of mixed packing sold at $14.70@14.85, with some common lights down around $14.25 and good pigs largely at $12.25@12.50. Late in the day bids of $15.10 were refused for choice butcher hogs.

More liberal receipts of lambs early this week, with the supply carrying a heavy movement direct to packers from western markets caused declines of 25c and more from the high spot late last week, but trade conditions have improved since on lessened receipts and stronger dressed mutton markets down East and at week-end prices are within 10@20c of a week ago and headed upward. Some bare spots are expected in the supply during the next thirty days and that choice handy-weight lambs will reach $16 is well within the range of possibilities. At present $14.85 is taking the best and the bulk of the medium to good lambs, running largely to 82@88-pound averages, is selling at $14.35@14.75. There is good demand for fleshy lambs for shearing purposes, Ohio, Wisconsin and Michigan shearers having taken out a number of loads this week at $14.25@14.50, higher prices than such stuff ever before sold on country account. Sheep and yearlings continue to form a meager quota of the arrival and are unevenly 10@25c higher than last week. New price records were hung up, choice light Colorado-Mexican yearlings reaching $14, a few prime native ewes $12.25 and choice fed western ewes $12.10. A lot of medium to good Mexican and western ewes sold during the week at $11@11.50 and $12@12.65 was paid for good to choice matured wethers. Supplies of shorn stock are increasing in seasonable manner and good to choice fresh shorn lambs sold at $11.50@12.15, the $11.50@11.75 stuff carrying considerable weight. Shorn yearlings, strong weights, sold up to $11 and shorn fed western wethers at $10.50. A lighter supply is expected from now on and with Easter demand approaching, higher prices, especially for light lambs, are probable.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

MR. STALLION BUYER

WE still have on hand a large number of two coming three Percheron stallions, those colts now weigh up to 2,110 pounds, and if you are looking for an outstanding good one to head your herd of mares you should write and get prices on those colts. Our three-year-old and aged Percheron stallions are the best lot we ever had on hand. They weigh up to 2,300 pounds. In Belgians we offer a very strong lot from one to six years old. Among them is Bizarre, a five-year-old sorrel chestnut stallion weighing 2,300 pounds. This stallion is as good as money can buy and fit to go any place. He must be seen to be appreciated. We have on hand a number of stallions from six to ten years old that have made seasons. Those horses weigh up to 2,100 pounds, and we will sell them very reasonable. We have a horse for every purse and know we can save you money. We want to buy 50 head of one coming two Percheron and Belgian stallions. Write us what you have. Send 25 cents in stamps for large horse hanger. Address

FRANK P. SHEKLETON & SONS **LAWLER, CHICKASAW COUNTY, IOWA**

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY, WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - WAUKESHA, WISCONSIN

Guaranteed Holstein Bulls

FROM 1 to 11 months of age, out of large record A. R. O. cows. They are sired by the great bulls, King Artis Pontiac and King Korndyke Veeman, that have records in their pedigree from 30 to 41 lbs. butter in 7 days. They are priced to sell.

Wisconsin Star Stock Farms **Ed M. Schultz, Hartford, Wis.**

"WHERE PRICE AND QUALITY MEET"

HOLSTEIN BULL CALVES by 32-lb. sires from A. R. O. dams. Popular breeding, good individuals. $100 up. Write and mention Wisconsin Farmer.

TULLOCH & FRIES' HERD GENOA, WIS.

Purebred Registered

HOLSTEIN CATTLE

Twenty million dairy cows in the United States, and five million of that number unprofitable! Surely one great public benefactor is the dairyman who by changing bad cows for good, seeks to produce two quarts of milk in place of one produced before. This progressive type of farmer, all over the continent, is either grading up his common cows with a purebred Holstein bull, or he has already installed the profitable purebred registered Holstein cows in his barns. He is adding to the wealth of the nation and to himself as well. Slowly, but surely, proper understanding will eliminate the unprofitable dairy cow.

AT LA BELLE VIEW FARM

WE are slaughtering pure-bred Holstein bulls from A. R. O. dams. It seems too bad, but that's right when we drop Duchess Ormsby bulls at such low prices as we have been selling them. If you want some of these youngsters sired by a first cousin to Duchess Skylark Ormsby (dairy queen of the world) at prices too low to print, write E. E. Rosenkrans, Oconomowoc, Wis.

Registered Holstein Calves

FROM Pontiac Rue, 23.88-lb. sire, and A. R. O. dams, 14.68 to 17.45 lbs. 7 days, $125 to $175 each. Chas. Hampke, Manitowoc, Wisconsin.

SHEEP.

VALLEY VIEW STOCK FARM

SPECIAL OFFERING

ON account of recent changes in our farm management I have decided to offer for sale 50 head of high-class, pure-bred ewes not heretofore offered, in the following breeds: Delaine, Cheviot, Southdown, Rambouillet and Oxford. These ees are all bred to high-class imported and prize-winning rams. I am also offering 25 head of pure-bred Angora does bred to winner at the Panama Exposition.

Geo. A. Philippi, R. 40, Bear Creek, Wis.

When writing to advertisers kindly mention The Wisconsin Farmer.

Who Want's a Pony?

I am the Pony King of America. I give Ponies away to Boys and Girls. I have given away 445 Shetland Ponies to 445 Boys and Girls—all over the United States.

Now I am going to Give Away Five more Ponies—beautiful, silky, long-haired playful Shetland Ponies—five of the finest Shetland Ponies I could find. I picked them out myself.

I am going to Give them Away to Boys and Girls and I want every family that takes this paper to stand an equal chance.

If you are a Boy or Girl send me your name right away. If you are the Father or Mother of a Boy or Girl, send in your Child's name. I will enter the name in my big Free-for-All Pony Club that starts right away.

No matter where you live, no matter how young, every child will stand the same good chance to get a Pony, with Buggy, Harness, Saddle, Bridle and Blanket. Be sure to send in your name right now.

"Crescent," a beautiful little pony, was given to Cecelia Garot of Kewaunee Co., Wisconsin. Cecelia sent in her name just like 444 other children who have received free ponies from the Pony King. Cecelia writes: "My little Shetland pony "Crescent" got here Wednesday and I was so happy I could hardly wait to see him. So many people came to see him and they thought he was the sweetest little pony they ever saw. Some people said I would not get a pony, but I knew The Pony King would do all he said. I am sending you my picture showing myself and my friend and my sister shaking hands with "Crescent." He just loves soda pop and eats sugar right out of my hand."

Harold A. Pierce of Waushara Co., Wisc., sent in his name and The Pony King sent him a nice pony named "Sportsman." Harold writes that "Sportsman" can now do 21 tricks, including telling how old he is rolling over, standing on his hind feet and shaking hands. The Pony King also sent ponies to Victor Harris of Ashland Co., Sheldon Adams and Alfred Hokenstad of Dane Co., Pearl Kerr and Lawrence Fox of Grant Co., Keith Walker of Juneau Co., and Roy Podewells of Rock Co.

Pony Pictures Free

I want to send a **colored Pony Picture Circular free** to every Boy and Girl that sends in his or her name. It gives the names and shows the pictures of the five Ponies I am giving away, out on the farm where they live, with children riding them. It shows one of the ponies hitched to the beautiful Buggy I am going to give away, with six children taking a ride. It shows a picture of The Pony King out on the Pony Farm, talking to 15 children who live near the farm and who come over to ride the Ponies. It shows a picture of Harold Kutzler and "Rob Roy", the Pony I gave him. It shows a picture of Frank McKissak and "Wuzzy", the Pony I gave him. It also tells all about the five beautiful Shetland Ponies I am now going to give away and how to win one. Every boy and girl should get this Pony Picture Circular. I will send it free to every child who sends in his or her name.

Children Be sure to take this chance to get a Pony. Don't wait. Write your name and address in the corner below, cut it out and send it to me. I will then send you the Colored Pony Picture Circular free and you will have an equal chance to get one of the Real Live Ponies I am going to give away soon. You stand just the same chance as any other child and it doesn't cost you a cent. Get your pencil and write your name now.

Parents Please show this free offer to your child and send in the coupon. You will be interested in the Pony Circular I send and your child will enjoy it. He or she stands the same good chance as any other child to win one of the five Shetland ponies I am giving away, no matter where you live. Remember, I am giving Five Ponies at one time—not just one—so you see there are five chances to win one. Send in your child's name.

THE PONY KING, 307 Webb Bldg., St. Paul, Minn.

WRITE YOUR NAME HERE AND SEND IT TO ME

THE PONY KING, 307 Webb Bldg., St. Paul, Minn.

Please send me the **Free Pony Pictures** and enter my name in your **Pony Club** so I will have the same chance. I want one of the ponies you are giving away.

My name is_____

P. O._____ Age_____

State_____ R.F.D._____

Here is one of the Ponies, with Buggy and Harness, that I give away. Wouldn't you like to own an outfit like this? Couldn't you have a lot of fun driving around the country? If you want a Pony for your very own, the first thing to do is to send me your name.

I Send Outfits Like This

I also Pay Freight Charges

Getting a Fair Price For Milk.

Green County Farmers Decide They Shall Have Some Say As to the Value of Milk They Produce.

MORE than 150 farmers in the vicinity of Monroe, Green county, Wisconsin, recently came to the conclusion that they have some rights when it comes to saying how much the milk produced on their farms is worth. These farmers, known as milk producers, are not unlike thousands of others in southern Wisconsin and northern Illinois, who, for a great many years, have quietly submitted to the dictates of others when it came to saying what farm products were worth. If one of these farmers had a cow for sale and was offered $100 for her, he would say: "No, that cow is worth $150 and I will not take a cent less for her." If the prospective buyer failed to meet the farmer's views as to the value of the animal, the cow would not change hands. The same situation existed with reference to the farmer's land. He fixed his own valuation on the land, and if anyone came along and said, "Here's $100 an acre for your farm; take it and give me a deed," the farmer would laugh at him. But when it came to selling milk, a product of the farm, a product in which the farmer had an investment of both capital and labor, he submitted to outsiders fixing the price. The particular company of farmers referred to in this article produces milk for one of the big condenseries. A number of these condenseries are located in the milk districts of Wisconsin and Illinois. Under the old system the managers of the condenseries asked their milk producers every six months to make an estimate of the amount of milk they would produce in a six months' period. On the first day of each month the buyers of milk handed out a card, showing the prices which would be paid for milk for thirty days. If the farmer did not like the price he took it anyway. For a long time the farmers failed to understand that they had some rights in saying what milk was worth. An effort was made in Green county about six years ago to organize the farmers. This effort was followed by small advances in the prices paid for milk, the advances being voluntary on the part of the buyer. Having thus gained a little, the farmers failed to see the need of continued organization and their association broke up. Up to two years ago these farmers had always supplied their milk on a monthly basis. No one had a very adequate idea just what the price would be. In the spring of 1915 the condenseries started out on the basis of $1.30 per hundred pounds for 3 per cent milk with 3 cents added for each 1/10 point over 3 per cent up to 4.2 per cent. This scale was graduated down until June it was as low as 89 cents for 3 per cent milk. In the spring of 1916 the buyers started on the same basis of $1.30 per hundred, except that they raised the three lowest grades, 3 per cent, 3.1 per cent, and 3.2 per cent milk, to $1.39 per hundred pounds. There was no raise at all on the better grades, the rate being the same as in 1915. In April, 1916, the Chicago Milk Producers' strike had resulted in an average of 22 cents raise in the Chicago district and the buyers voluntarily gave a raise of 20 cents in the Monroe district. This was on a six months' contract, and the milk producers were quite well satisfied until they discovered that the buyers had cut off the advance which had been made, bringing the 3 per cent, 3.1 per cent, and 3.2 per cent milk up to $1.39 per hundred pounds. This really established the 20-cent raise on the basis of 3.3 per cent milk. Under the old price the producer of 3 per cent milk had been getting $1.39 per hundred and with a 20-cent raise would have gotten $1.59. But as the buyer had cut off his 9-cent raise previously given, under the new contract for April, 1916, the producer of 3 per cent milk got an advance of only 11 cents instead of 20 cents. Instead of receiving $1.59 for 100 pounds of milk which he expected on the 20-cent raise he received $1.41. The producer of 3.1 per cent milk was treated on the same basis and instead of receiving $1.59 per hundred for milk he received $1.44. Figuring on this same basis the producer of 3.2 per cent milk, instead of receiving $1.59, as he expected under the 20-cent raise, received only $1.47. For the six months' period, beginning April 1, 1916, the buyers paid an average of $1.55 for 3.5 per cent milk, except for a 5-cent cut in July and August.

FARMERS DELIVERING MILK AT THE CONDENSERY, MONROE, WIS.

On the 14th day of September, 1916, the producers for the Monroe condensery decided to organize and 145 out of 165 were included in the original charter list. Several meetings were held and on the 28th of September, 1916, word was sent to the superintendent of the condensery that the producers expected an average rate of $2 per hundred pounds for 3.5 per cent milk, beginning October 1st and ending April 1, 1917. They further expected 3 cents for every 1/10 point over 3.5 per cent test and agreed to 3 cents cut for each 1/10 point below 3.5 per cent test. Under this proposition 3.2 per cent milk would bring $1.91 per hundred pounds; 3.3 per cent would bring $1.94 per hundred pounds. The average run of milk furnished to this condensery tests below 3.5 per cent, probably about 3.2 per cent or 3.3 per cent. The 145 farmers who agreed to stand together in this matter were prepared for any eventualities. They resolved that they would skim their milk if they could not get from the condensery what they believed to be a reasonable price. Representatives of creameries were conferred with, and while they insisted that they were not trying to compete with the condensery or to interfere with its supply, they were ready to take over the farmers' cream if the farmers and the condensery were unable to agree. Representatives of the milk producers conferred with the local dealers and found that they could have all the separators they wanted on the grounds in twenty-four hours. As a result of this activity and activity along similar lines in other milk-producing districts, the condenseries of the Wisconsin and Illinois fields met the farmers' prices. A new schedule was adopted two weeks ago both by the buyers and producers and this schedule averages $2.12 per hundred pounds for 3.5 per cent milk for the six months' period, beginning April 1, 1917, and ending September 30, 1917. The schedule of prices for milk for the months named will be as follows: April, $2.40; May, $2; June, $1.60; July, $2.12; August, $2.30; September, $2.30. Under this schedule the condensery agrees to accept all of the milk which the members of the association will produce. Formerly there was some trouble along this line. Sometimes the milk producers placed too low an estimate on the amount of milk they would have in a six months' period and it was not infrequent that farmers, having produced more than their estimate, were obliged to take their milk back to the farm, having no market at all.

The April, 1917, milk price of $2.40 for 3.5 per cent milk is the highest contract price ever given in Wisconsin. It amounts to 5 cents per quart to the farmer, there being forty-eight quarts in 100 pounds of milk.

There are many reasons why farmers should have more for their milk now than in previous years. Feed is considerably higher. Ground feed, which sold in 1915 at $25 a a ton in Monroe is now $38 to $40 per ton. These same feeds last year sold around $35 a ton. Alfalfa hay has been selling at sales in Green county this year for $20 to $22.50 per ton and baled alfalfa hay at the town of Monroe now is worth $22 per ton and up. Even a year ago a considerable amount of good alfalfa hay was sold for $16 a ton. Oil meal now selling at $50 a ton was sold last year at $36 per ton, although some of the producers are still using this product on a long-time contract at $39 to $40 per ton. The price of labor on the farm has almost doubled in the last few years. The price of all equipment is up and the price of all merchandise which the farmer must buy is increased.

However, the main thing which has been gained at Monroe and in the other milk-producing districts is recognition of the fact that for years milk has been produced and sold at too low a price. Considering its food value, it has been worth more than the farmers have gotten out of it and the readjustment is largely a case of the farmer getting his share. That the farmer did not get his share on milk sold for the past few years as low as 89 cents per hundred pounds is now generally conceded.

The writer had a visit a few days ago with Mr. F. D. Jeffery, president of the Monroe association, and Mr. W. A. Brown, secretary. Mr. Jeffery advises us that his association is not endeavoring to get anything more than is just.

(Continued on page 14)

more, ever since merchant vessels were German submarines in one day, with the loss of several American lives. It is also expected that he will ask congress to give him authority to further protect American lives and property on the high seas, even to the extent of sending battleships and troops abroad to join with the allies against Germany, if necessary. Already there are rumors that Germany may declare war on the United States before congress can take this action; also that Germany will ask some neutral nation to mediate the differences between the two countries, in the meantime not stopping the ruthless submarine warfare which is occasioning all the trouble. The situation is extremely tense, with new developments arising every day. Last week still another American ship, the Algonquin, carrying a cargo of oil from Philadelphia to Amsterdam, was torpedoed without warning, still further widening the breach between the two nations. There is a rumor that Theodore Roosevelt is already forming a force of 100,000 Americans to go abroad and fight Germany. It is probable that many idle reports will be circulated because of the critical situation. As yet there have been no actual hostilities other than the sinking of the American ships, but there is no question but that the situation becomes worse day by day, with war more imminent than ever before.

THE abdication of Czar Nicholas of Russia was not only for himself, but also for his son, the young heir apparent. It was quickly followed by the abdication of the czar's brother, Grand Duke Michael, successor to the throne. The Russian congress (the Duma) arranged for a provisional government in charge of twelve men. The best of order has been maintained while this unsettled state of affairs was in progress. United States Ambassador Francis sent a cablegram to the state department at Washington, during the week in which he said: "The last week has seen the most astonishing revolution. Two hundred million people who have lived under absolute monarchy for ... on condition ... a constitutional assembly of the people so wish and who will exercise power under authority of government framed by that assembly." There is considerable possibility of a republican form of government being established which will make virtually a United States of Russia, somewhat similar to the United States of America. Only one thing is positive as yet and that is that the day of absolute monarchy is over in Russia.

MANY prominent business and professional men attended a meeting of the Union League Club in New York City last week and issued an emphatic warning that the United States is unprepared for war with any first-class powers. Chas. E. Hughes, republican candidate for president, presided over the meeting, while spirited addresses were made by Ex-President Roosevelt and Robert Bacon, former ambassador to France. A report was issued showing the unprepared state of the nation as follows: "If we go to war with Germany our only real protection will be the ships of the French and British navies, and our own navy, which is undermanned. We have no coast defenses which could prevent the landing of troops on our shores. We have no defense which would prevent the complete and immediate capture of our coast cities and ammunition factories in the coast states of New Jersey and Connecticut, as well as every one of our navy yards. The facility with which a hostile power could land troops on our shores has been repeatedly and authoritatively stated. Our regular organization lacks many things which are vitally essential in modern war. We lack machine guns of all types. We lack grenades and bombs. We are without trench mortars, and the modern types of heavy mobile artillery such as are in general use in Europe. We are short of reserve rifles and all field artillery. We have not a field gun for volunteers. Our supplies of reserve ammunition are ridiculously small." Colonel Roosevelt insistently urged action, charging Germany with murder and stating that the United States is hiding at present in safety behind an English fleet.

NAVAL preparations for war were marked by increased activity last week. No actual war steps were taken by either the war or navy departments, but there were many indications that preliminary plans have been worked out for rapid remobilization for both services if the call comes. The navy's task is simple. Its problems are those of material rather than personnel. At most little more than 100,000 men would be required for manning every available ship or scouting craft. They could be obtained almost overnight by mobilization of the naval militia and the various sections of the naval reserves supplemented with volunteers. Only highly trained officers would be lacking. The army's problem is just the reverse. It is men that will be needed and no definite step toward securing a great force for training can be taken until congress expresses its will. Full equipment can be obtained long before the men are ready to use it.

THE United States Supreme Court has declared constitutional the Adamson eight-hour law, the passage of which by congress last September averted the threatened railroad strike. The decision not only averted the strike which had been called again for last week, but it is expected to have a far-reaching effect, holding as it does that congress is clothed with all the power necessary to keep open the channels of interstate commerce. The immediate effect of the decision will be to fix a permanent eight-hour basic day in computing wage scales on interstate railways, for which a nationwide strike twice has been threatened and to give, effective from January 1st of this year, increases in wages to trainmen of about 25 per cent at a cost to the railways estimated at from $40,000,000 to $50,000,000 a year. The wage increase sustained dates back to January 1st, when the Adamson act was made effective. The strike was called off just in time to avert a walk-out on eastern railroads and to seriously cripple transportation all over the country.

DAVID LLOYD GEORGE, British premier, has telegraphed to the Russian premier saying he believed the revolution in Russia was the greatest service the Russians had yet rendered to the allied cause, and that it was a sure promise that the Russian military autocracy, the only barrier to peace, would soon be overthrown. "It is with sentiments of the most profound satisfaction that the peoples of Great Britain and the British dominions have learned that their great ally, Russia, now stands with the nations which base their institutions upon responsible government," he said. "Much as we appreciate the loyal and steadfast coöperation which we have received from the late emperor and the armies of Russia during the last two and one-half years, yet I believe that the revolution whereby the Russian people have based their destinies on a sure foundation of freedom is the greatest service which they have yet made to the cause for which the allied countries have been fighting since August, 1914."

1842 The Seventy-Fifth Anniversary of 1917

P&O

LIGHT DRAFT PLOWS

Built for the Field Test.

Three-Quarters of a Century of "Knowing How" Hammered Into Every One of Them.

The product of the Parlin & Orendorff Co. has always been noted for simplicity of construction, great strength and ease of operation. It was upon such a basis that the founders of this business made their implements, established their reputation, and built their factory. It is upon the same foundation that the business has been carried on to this day, and in 1917 we celebrate our Diamond Jubilee; 75 years of practical experience gained through constantly striving to provide for the exacting requirements of three generations of American farmers.

For an even three-quarters of a century we have met the demand, and today we operate the largest and oldest permanently established plow factory in the whole world. "It's the way we build them."

P&O

Light Draft Plows, Harrows, Planters and Cultivators are made in all types and sizes, to meet the conditions in all sections, and are Backed by an Unqualified Guarantee.

We also make the most complete line of Traction Engine Plows produced, and we have a special catalog devoted to these famous plows.

The P&O Little Genius Engine Gang Plow

was the most popular plow shown at all points on the 1916 National Tractor Demonstration.

We will send P & O Catalogs to any address. While P & O Implements are sold only through established implement dealers, we welcome correspondence from farmers in all sections.

WANTED to hear from owner of farm for sale or exchange. Kubat Realty Co., Chippewa Falls, Wis.

Deere Motor Cultivator Is Latest Motor Triumph.

Notwithstanding the great and increasing activity in the manufacture of farm tractors and the corresponding increase in the number and variety of machines produced, there is still a neglected demand for one much needed improvement, viz.: A real motor cultivator produced and marketed at moderate cost by a responsible manufacturer.

Deere & Co. are said to have practically perfected a motor cultivator, unique in principle and design, and which, in addition to cultivating corn and other row crops, will do substantially all of the farm work ordinarily done by a team, and in addition furnish belt power for driving farm machinery, just as an ordinary stationary engine of from six to eight horse power would do.

"In this unique machine the operator rides on the cultivator," says a critic. "The propellor or driving mechanism is behind, and is guided and controlled through and by means of the cultivator. In other words, steering the cultivator through the shifting of the rigs automatically steers the propelling mechanism.

"If the cultivator is deflected to or from a row of corn, the propellor automatically follows it. The driver is not obliged to control two machines. He simply shifts the rigs in the ordinary manner and the machine 'does the rest.' The device is entirely practical, and indeed dodges offset hills and follows crooked rows better than the ordinary horse-drawn tool, and turns around in less space at the end of the row.

"Incidentally, the machine, as stated, is arranged to do a considerable variety of farm work. It pulls as well as pushes, handles a drag harrow, small grain drill, mower, single plow, etc.; in short, anything that can be done with one team.

"The cost to the farmer will approximate that of a span of good horses. It is called the 'John Deere One-Team Tractor.' That the newcomer will receive a hearty welcome from the trade is obvious."—[From the Chicago Evening Post, March 10, 1917.

Fertilize Spring Crops

Increase Yields
Improve Quality
Hasten Maturity
Maintain Fertility

Plan your 1917 work so as to get the most money from every acre. Lower costs per bushel for plowing, seeding, interest and labor result when crops are well-fed. *Fertilizers will pay on your spring crops.* Higher prices for farm products make profits from using fertilizer larger than ever before.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production

THE demand for farm labor in Canada is great. As an inducement to secure the necessary help at once, Canada will give **one hundred and sixty acres of land free as a homestead** and allow the time of the farm laborer, who has filed on the land to apply as residence duties, the same as if he actually had lived on it. Another special concession is the reduction of one year in the time to complete duties. Two years instead of three as heretofore, but only to men working on the farms at least six months in 1917. This appeal for farm help is in no way connected with enlistment for military service, but solely to increase agricultural output. A wonderful opportunity to secure a farm and draw good wages at the same time. Canadian Government will pay all fare over one cent per mile from St. Paul and Duluth to Canadian destinations. Information as to low railway rates may be had on application to

FAMILY CIRCLE TA

BY THE PUBLISHER

FIVE PER CENT LOANS FOR WISCONSIN.

I AM glad to be able to announce this week that the Federal Farm Loan Board has officially set the rate of interest for loans made through the new banks at 5 per cent. The bonds which will be issued to raise a constantly replenishing fund will bear 4½ per cent. The board feels that it can administer the law on a margin of ½ per cent, although the law allows it 1 per cent if necessary.

Let me show just what this interest rate will mean to the farmers of Wisconsin. The present farm-mortgage indebtedness of our state is $206,681,000; the farm loan board has investigated and finds that the average interest rate, on farm mortgages here in Wisconsin, is 5.8 per cent. A saving of eight-tenths of 1 per cent means a saving to the farmer-borrowers of Wisconsin, at the present volume of mortgage indebtedness, of $1,653,448 a year in interest. But the saving will be even larger, for the reduction in the interest rate will undoubtedly result in an increase in the mortgage debt. Men can borrow on easier terms and they will enlarge their mortgages in order to buy new land, pay off the debt on the old land, install more stock or machinery, build better farm homes, and so on. The new law, were it to apply to all our mortgage indebtedness or result in private loaners meeting the government's rate, would mean a saving to Wisconsin alone of $2,000,000 a year.

I am in receipt of official advices in regard to the early opening of these federal land banks and the attractiveness of the mortgage bonds for those farmers (and town folks as well) who desire to invest under the new law rather than to borrow. I will pass these advices on to you, for I am confident almost all of my readers are interested in this subject:

The board was enabled to attain this low rate by reason of the proved attractiveness of farm loan bonds as an investment. Applications from private investors, from bond brokers, bankers, holders of trust funds, and others have given the board ample assurance that these bonds will be absorbed in large quantities at 4½ per cent. The bonds are exempt from all form of taxation; each dollar's worth of bonds represents a mortgage against $2 worth of land, and this mortgage is guaranteed by a farm loan association. The bonds issued by each of the twelve federal land banks are endorsed by all of the other eleven banks. The bonds are engraved by the United States Government Bureau of Engraving and Printing and are protected against counterfeiting by the United States secret service. Applications which have already been received by the farm loan board indicate that they will be one of the most attractive securities ever placed upon the market. It is expected that in order to finance the farm loan associations already organized it will be necessary to sell $100,000,000 worth of these bonds within a year.

The presidents of the twelve federal land banks have been in session in Washington for several days with members of the farm loan board. They have returned to their respective banks to put them into actual operation. The full subscriptions to the capital stock of the twelve banks has been placed at the disposal of the banks. This amounts to $750,000 for each bank. The appraisers who will pass upon land values will be named shortly, and the banks will then give immediate consideration to the thousands of applications from farm loan associations.

This flat rate of 5 per cent will apply all over the United States. In Florida the average rate has been 9.6 per cent, in Montana 10 per cent, and in New Mexico 10.5. The government will loan money to farmers in these states at just one-half the interest rate they have been obliged to pay heretofore. The new law will benefit them more than it will the farmers of Wisconsin and the grain belt, but it should work to the benefit of farmers all over the country, if it is properly administered and lives up to the expectations of its authors.

THE RESPONSIBILITY OF THE WISCONSIN FARMER.

I AM in receipt of a letter from Mr. A. R. Lawton, a prosperous dairy farmer of Viola, Wisconsin, which pleases me immensely and which opens the way for the discussion of a subject which has been upon my mind very much lately. That subject is the responsibility which the editorship of a paper like The Wisconsin Farmer entails. Let me quote a portion of Mr. Lawton's letter first and then add my views, briefly:

I like The Wisconsin Farmer very well, indeed. I appreciate your conscientious efforts to lead the thoughts of the farmers in right lines. Your opportunities for good are limited only by your health and your ability to grasp and grapple with the scores of serious problems that are continually confronting the farmer today. It is painfully evident many of our prominent editors and leaders are not really conversant with the desires of the masses. I am convinced that you are.

I will give you a list of our reading material, which you may criticize, if you choose. We take and read regularly The Wisconsin Farmer, the Ladies' Home Journal, the Ladies' World, the National Geographic Magazine, Swine World, Black and White Record, Holstein-Friesian Registry, Pearson's, LaFollette's, Green's Fruit Grower, Hoard's Dairyman, Milwaukee Journal, four town and county papers, two religious papers, three lodge papers and the bulletins of the Wisconsin State Agricultural College and the National Department of Agriculture. It takes practice to get through all these, and others, besides working about sixteen hours a day, but we do it and all profit as a result.

First, let me congratulate Mr. Lawton upon his splendid list of publications; he has something for every member of the farm household. I could hardly improve upon the list. If my good friend and his family cull the best that is to be found in all these publications, they keep abreast of current opinion and public thought, are good farmers, good citizens, good patriots and good men and women.

Now, the idea I have long had in my mind and which Mr. Lawton's letter causes me to speak about is just this: The immense responsibility of the editor and publisher of a paper such as The Wisconsin Farmer. Did you ever stop to realize that the man who writes editorials in a paper like The Wisconsin Farmer talks to a bigger audience regularly than any public speaker who ever lived? The two public men who draw the largest audiences nowadays are unquestionably "Billy" Sunday and Wm. J. Bryan. The former speaks to perhaps 50,000 to 75,000 people a week; 100,000 in the larger cities; the latter speaks to perhaps 25,000 a week. Yet, here I am writing editorials of advice and instruction to a subscription family, on The Wisconsin Farmer, of 90,000 a week. The average household in the United States contains five persons; each copy of the average publication is read by five people. Figuring at this ratio, here I am talking to 450,000 men, women and children every week of the year. But The Wisconsin Farmer is not the only farm paper I have the honor to own, edit and publish. I have two others, the combined weekly circulation of which is 290,000 copies, which means another audience for me of 1,450,000 people weekly. All told, my writings in my three papers go, on an average, to almost 2,000,000 people weekly.

Think what this means; think of the responsibility of choosing subjects for discussion that will interest all these people, and expressing ideas in words which will benefit all the number and not bring harm or doubt to a single mind. It is an immense responsibility, before which I would stand appalled were it not for one thing: The good words, the kindly comment, the friendly inspiration of the men and women who read The Wisconsin Farmer, and my two other papers, and write to me every little while, encouraging me to continue the good work, just as Mr. Lawton did.

The editor and publisher who tries to live up to the full measure of his responsibility and opportunity has a man's job ahead of him, believe me. I am striving, with might and main, to fill the job. Can I count on having your help? Farmers of Wisconsin, will you assist me? If I am right and sound in my theories, and you like what I write, will you tell me so? If I write that which is unsound or debasing, will you criticize me, as one friend counsels and criticizes another, hoping to do him good? Let me hear from you on any subject in which you or any member of your family is interested. Give me topics to write on, that you care to hear my views on. By thus counseling together, we can make The Wisconsin Farmer an ideal farm-home journal, in every sense of the word. I will do the best I can; will you do your share?

ABUSING MAN'S BEST FRIEND IN WISCONSIN.

I WANT to print a letter which I have just received from a subscriber at Spring Green, Wisconsin, who, for good and sufficient reasons, does not wish his name and address published. The letter brings up the very interesting subject of the proper care of animals. Wisconsin being the leading dairying state of the Union (in the number and value of dairy cattle and in the manufacture of cheese) the question, so far as it refers to the manner in which at least one Wisconsin farmer treats his cows, is important. Let me print the letter before I go any further:

Dear Mr. Pierce: I have been a subscriber to The Wisconsin Farmer for about three years and have often read articles on the treatment of farm animals. There is a farmer not over one-half mile from me that shows unbounded partiality to his own team; they can do just about as they please and very, very seldom get punished. This team will not obey commands in the barn, or in the harness, unless the driver keeps repeating them. To be brief, they obey about one order out of seven.

With his milk cows he is altogether different. Let a cow "loo" for her calf or bawl a few times and he goes at her with a six-tine manure fork. If a cow, after being let out of the stanchions, lingers a moment in the barn he lets a yell at her that can be heard plainly to my place. When a cow does not step around as lively as he thinks she ought to, she gets an application of the fork, shovel or milk stool. A cow dare not make one false move or let one "loo" escape her without being punished; but he can talk to his horses even better sometimes than he speaks to his wife. This man always preaches "The more quietly a man works around horses, the better the horses will work." He does not seem to think he should treat his cows in the same manner. He seldom speaks quietly while working around the calves. Mr. Pierce, what do you think of such a man?

I think that man is very unwise, very foolish, very much to be criticized and condemned. Reading this letter there came to me the lines of the poet:

He prayeth well, who loveth well
Both man and bird and beast.
He prayeth best, who loveth best
All things both great and small;
For the dear God who loveth us
He made and loveth all.

I fear that man, who abuses animals as he does, is not measuring up to the test imposed by the poet, a test in which I believe thoroughly. There is something wrong deep down in the heart of the man who is not kind and considerate to those who are weaker than he is, who are dependent upon him, for whose care he is responsible.

Moreover, it is extremely shortsighted for this farmer, or any other, to treat his cattle thus, for no animal is more responsive to kindness than the cow. From a dollar-and cents standpoint—if from no other—this man should certainly change his ways. Housing our dairy cows ideally, feeding them properly and treating them kindly will so increase their output as to enlarge our returns and our prosperity materially. Kindness pays financially, as well as in the satisfaction which it gives us to know that a duty and a responsibility have been lived up to fully.

I would be glad to have letters sent to me on this subject, setting forth the opinions and experiences of my Wisconsin readers. It is a subject which I believe we can discuss together with the greatest pleasure and profit. Will you write to me upon it?

A FREE EMPLOYMENT AGENCY.

I WOULD like very much, indeed, to make The Wisconsin Farmer a medium through which the manless job and the jobless man could be brought together. In other words, I propose to do what I can to see that the farmer who needs a hand finds one without delay, and that the farm hand who is seeking a new location finds one without loss of time. To this end, I make the offer herewith to print every little while, the names and addresses of farm hands looking for employment and farmers needing men, so that those who read this paper from week to week shall be able to make it a regular employment agency, the services of which are to be had without cost by all subscribers.

I print herewith, this week, the names and addresses of a number of men who have written to me recently saying they desired farm employment. Farmers who are in need of help would do well to correspond with these men. Here is the list:

Louis Kuschel, Box 324, Hermann, Mo.	A. W. Fletcher, R. R. 1, Gallatin, Mo.	E. E. Bevier, 138 S. Adella St., Ottumwa, Iowa.
E. G. Jacobson, Home City, Kan.	Edwin A. Claxton, Sumner, Iowa	S. E. Hining, Floris, Iowa.
H. A. Lemons, 1320 West 4th St. Joplin, Mo.	Erwin H. Borchert, R. D. 33, Box 90, Campbellsport, Wis.	Joseph Binder, 3001 Main St. Kansas City, Mo.

Remember, this service is free to all. If you are looking for a man to help you work the farm this year write me and I will print your name and address in an early issue. If you are working on a farm and wish to change, or if you are now in the city and wish to get back to the farm, write me and I will print your name and address in an early issue. There is a manless job somewhere for every jobless man; it is my task to bring the two together.

A NAME FOR EVERY WISCONSIN FARM.

EVERY little while we print lists of appropriate farm names here in The Wisconsin Farmer. Such a list was published only a week or two ago and contained many names which reveal the owners' pride in the farms which they have built up to their present state of prosperous productiveness with such loving care and efficiency. I hope my readers will continue to send me sugges-

...ed ... place was ...ather in the fall of ... and his seventeen-year-old sister came here in July of that year and located, on December 15th, in the town of Springvale, Columbia county. In the fall my father shot his first deer, which was a buck, within a few rods of his log shanty, and from that day to this the place has been called Buck Hill. A piece of one of the buck horns is made into a handle for a cane which no money would buy as long as I live.

Here is a Wisconsin farm which has borne the same name for seventy years, a name which the present owner has registered and thereby secured exclusive rights to in his part of the country. Think what a world of pleasure he gets out of this, what a memory of his father it brings up, what a monument to one of our Wisconsin pioneers this farm of Buck Hill is

The High Cost of Selling.

The instance has been called to my attention of a Quincy, Illinois, farmer who placed a note in a barrel of apples grown, packed and shipped by him, stating that he had received $2.50 for the barrel and asking the purchaser to write and say what price he was obliged to pay. Now, it turns out, the retailer who bought the barrel paid $6.50 therefor, or $4 more than the farmer-grower received, while just how much the "ultimate consumer" was forced to pay there is no record.

Within the past few weeks I have received a number of letters citing similar cases. The most interesting of these letters informs me that apple growers in and around Bethany, Missouri, sold their products to a dealer in Kansas City, at harvest time, for 9 cents a bushel. These apples were stored for several months and are now being sold out of the Bethany boxes, in the Bethany stores, for $2.75 a bushel. The storage cost is said to have been in the neighborhood of 60 cents a bushel, leaving a nice, tidy profit of over $2 a bushel for the men who stand between the producer and the consumer. This same letter tells me of farmers around Concordia, Missouri, who sold their potatoes, at harvest time, for $1 a bushel and are now buying them back for $2.25 a bushel for seed. The letter does not give the information, but I add it, that potatoes have recently sold right here in Wisconsin, in our larger cities, for $3.50 and even more a bushel. Nor is the farmer the one who is reaping the benefit of these abnormally high prices.

We hear a great deal nowadays about the "high cost of living;" I want to call your attention, for just a minute, to the "high cost of selling." I cannot do better, in this connection, than to reprint a little story which I found in one of our large daily newspapers just a day or two ago. It is as follows:

I spent a couple of hours the other day in a shoe factory.

"These," said the head of the firm, pointing to a dainty pair of shoes, "we sell wholesale at $10."

"What does the customer pay for them in a store?" I inquired.

"Sometimes not less than $20," he replied.

So it appears to cost as much to sell a shoe as to make a shoe.

The farmer who raised the calf that yielded the skin, the butcher who removed the hide, the tanner who converted it into leather, the railroad which hauled it 2,000 miles and the factory which carefully made the leather into a shoe, together split fifty-fifty with the exclusive shop which retails it to your wife.

There is something altogether wrong with a scheme of economics which permits the producer (the farmer who grew the potatoes and apples, the stockman who raised the pork and beef) to receive the small end of the purse which his products bring. In the case of the Quincy apples the producer received only one-third of the ultimate price; in the case of the Bethany apples the producer received only one-thirtieth. Certainly there is as much art, hard work, risk and enterprise manifest in cultivating an orchard, pruning the trees, spraying, protecting with smudge pots against frost and bringing the crop through to maturity, as there is in loading a box upon a freight car, unloading it and storing it away in a dark cellar for a few months. It is high time the farmers of America—and particularly right here in Wisconsin—were paying more attention to the highly important factor of marketing.

We are rapidly reaching the top-notch of our productiveness; we cannot continue to break our acreage-yield records indefinitely. Some day we shall have put the last acre of waste land into cultivation. The future profits and prosperity of the farmer depend upon his mastering the art of marketing as thoroughly as the art of producing. Some day the farmer will say what price he will sell his produce for, where he will sell it, when and in what quantities. That day he will be master of the economic and financial situation, and never before that day, no matter how productive his fields and his herds become.

Rescue the Country Church.

I have seen the statement made (and never contradicted, so far as I know) that within the last few years no less than 5,000 country churches have been abandoned in Wisconsin, Illinois, Iowa, Missouri and Kansas. If this is true, the problem of the country church is one of the most serious before the nation today.

I discussed this question a little bit in The Wisconsin Farmer a few weeks ago, telling the story of a devoted "mother in Israel" back in Ohio, in the early days, who, in the face of almost every conceivable hardship, succeeded in establishing and maintaining a church on four acres of farm land set apart by her husband for this purpose. I believed the story was inspiring, and many of my readers seem to have found it so, for approving letters are coming to me in large number. I am going to print one of these letters; it is characteristic of many. It was written to me by Mr. W. H. Fray, a subscriber, and is as follows:

Dear Mr. Pierce:—I had not thought of writing to you, but after reading your editorial on "Country Church Problem" I just had to write. I want to express my appreciation of that splendid article. The description of triumphant faith, of love, of sacrifice and of service is truly great. Long may you live to send out such uplifting words, expressive of the possibilities of the Christian life, to your readers.

My friends, a letter like this is recompense for many hours of hard work, for many pages of "views" such as mine. I thank Mr. Fray from the bottom of my heart for giving me this helpful commendation; I shall endeavor to be a better thinker, a better writer, a better doer, because of his faith in me and his kindly, friendly words.

In the meantime, what can you and I do to save and to revivify the country church? I have seen it stated that President Waters, of the Kansas State Agricultural College, lays the blame for the dying country church upon the automobile and kindred conveniences in this fashion:

The advent of the motor car, the building of better roads, the general prosperity of the farmer and the attendant luxuries of a nice team of trotters and a carriage to take the place of the old lumber wagon or of the spring wagon as the family carry-all, and the improvement in education, in ideals and desires are the elements that have brought about this change and are causing the abandonment of thousands of country churches.

Is the indictment well founded? Are the motor car and the fine team of trotters responsible for the doors of thousands of country churches being nailed up and the windows being broken out? Or, does the blame lie with ourselves, our restlessness, our discontent, our lack of the faith of our fathers? Let me have your ideas on this subject; we could not do better than to rescue the country church from extinction, if, indeed, the danger is as great as many claim it is.

James M. Pierce

The Wisconsin Farmer — Madison, Wis.

Wisconsin Milk Profits.

The Wisconsin Farmer is indebted to Mr. George R. Moss, official tester for the Waupaca and Butternut Ridge Cow-Testing Association, of Waupaca county, for figures which should be highly interesting to dairymen-farmer readers. In this era of high-priced feeds the question naturally arises whether it pays to buy feed for cows. Mr. Moss encounters this query almost daily. In a communication sent us by Mr. Moss he recounts the experience of Mr. Wm. Rossey, of Weyauwega. Two years ago, according to Mr. Moss, Rossey decided after some misgivings to become a member of the cow-testing association. Only a short time ago Mr. Moss visited the Rossey home and he writes as follows:

We got to talking about the money made with cows. He has seven two-year-old heifers and three mature cows, and in 1916 he delivered to the condensery 67,155 pounds of milk testing 4.53 per cent, bringing him a total of $1,279.41 also feed cost of $646.52, leaving him a net profit of $632.89. These are not the cow tester's figures, but actual amount that was delivered to the factory. Mr. Rossey says it certainly pays to use the Babcock tester and milk scales, and that is what has helped him to show large checks. Mr. Rossey's ration is corn silage, clover hay, bran, corn meal, ground oats, brewers' grains, ajax. This ration supplies the cow with enough nutriment to produce milk and butter fats and for her own maintenance.

Some farmers will say they are not going to put a lot of high-priced feed into their cows, and perhaps just feed bran, which would cost $30 per ton and this above ration would cost $38. Yet the higher-priced ration is the cheapest for dairy cows. If dairymen refuse to feed their cows a complete ration it would be well to sell them, as no man can afford to board a cow. If we are in the dairy business, let's make it a business. When we go to buy feeds, let's keep our eyes open to see the analysis of the different feeds. Keep records of the feed the cow consumes and the milk and butter fat she produces, and fall in line with Mr. Rossey and receive checks like he does and know how he gets it. An average of $127.94 per year from each cow with an average feed cost of $64.65 per cow, leaving a net profit of $63.29 or almost $2 for $1 expended for feed. Isn't this a good investment? Does it pay to feed? Ask yourselves the question.

State of milk delivered by Wm. Rossey:

Month	Lbs.	Test	Rate	Total
January	4574	4.4	$1.92	$ 88.04
February	5446	4.3	1.82	99.49
March	7388	4.4	1.85	137.22
April	7166	4.4	1.70	122.18
May	7811	4.5	1.63	127.40
June	7159	4.5	1.51	108.67
July	5885	4.5	1.63	95.98
August	4881	4.6	1.84	89.81
September	3726	4.8	1.98	73.77
October	3943	4.8	2.22	87.53
November	4032	4.8	2.40	96.77
December	4032	4.8	2.93	152.55
Total	67155	4.53	$1.95	$127.41

This is only one of many instances which might be given to prove that it really does pay to feed the dairy cow even at the present prices of feed. Of course, feeding and the care of the cow must be given some study.

If War Should Come.

President Wilson has called congress to meet in extraordinary session on April 2d. One of the first things to be done will be to declare (in all probability) that a state of war exists between the United States and Germany. The coming session of congress promises to be historic.

The Wisconsin Farmer proposes to report the happenings of the nation and world, without prejudice, in its department known as Current Events. Farmers who wish to find out, in a few words, what is going on in the nation and world cannot afford to miss this weekly review of the news. If war should come the weekly news review will be of more importance than ever.

Those whose subscriptions to The Wisconsin Farmer have recently expired, and those whose subscriptions will shortly expire, should lose no time in renewing, so as to keep abreast of current happenings, as well as to have the host of practical farm advice and information which every issue of The Wisconsin Farmer contains. So take our advice, renew your subscriptions promptly and secure as many new subscribers for us as you can. We shall report the news of the world impartially and continue to make The Wisconsin Farmer the most practical and dependable farm paper published.

Wisconsin Legislature.

A bill introduced into the assembly by the committee on agriculture is a measure providing for an appropriation to the department of agriculture for the control of tuberculosis. The purpose of this, as has been outlined by that department, is to make a survey of certain sections of the state with a view of finding out the true conditions with regard to bovine tuberculosis. It is proposed to coöperate with the people of the section undertaken and have all cattle examined in a given section or county with a view of segregating all tubercular cattle. Besides the value of finding out the true conditions there will also be considerable advantage to the section so tested out, because it will be evident that it will be desirable for the buyer of cattle to buy in a section where he may be quite sure that all the cattle for sale will be from reasonably clean herds. The department is not contemplating the condemnation and destruction of the cattle as heretofore, except when insisted upon by the owner. It is planned that with a little coöperation on the part of the owners of the cattle that most of the reacting animals may be segregated and by pasturing the products we may be able to make them useful to the owners and assist them in getting a clean herd to be raised on the pasteurized products; by the same means also make it possible for the owner to secure the normal income from these animals which is obtained from the regular herd.

An Honor For Wisconsin Man.

Ben F. Faast, of Eau Claire, has been appointed vice president of the farm loan bank located at St. Paul Minnesota. Mr. Faast is one of the big men who have helped to develop the northern section of the state. As a land man his interests might be attributed to selfish motives by some, but those who know Mr. Faast will testify that his interest in the settling of these lands has always been of the genuine kind. He is ever on the lookout for men that will be an asset and not a liability to the fertile acres of the North.

Mr. Faast has a considerable knowledge of banking, especially as it affects northern and northeastern Wisconsin. He was at one time a clerk in a bank in Eau Claire. As the work seemed to furnish for him then only a limited field for advancement he decided to take a course at the Wisconsin College of Agriculture. On graduating in the two-year course he returned to Eau Claire and organized the Faast Land Company and later was active in forming similar organizations in Eau Claire and Rusk counties. He has been probably more than any other one man responsible for the development in Rusk county the past seven or eight years. He is president of the Conrath State Bank, an institution which has worked out very novel and successful methods of loaning money to farmers. This bank

is the first bank, so far as we know, which worked out a plan to loan money to farmers who wanted to clear stumps off their lands. The bank, and other institutions in which Mr. Faast has been interested, has also done considerable work along the line of loaning money for dairy cattle. Mr. Faast was also associated in the organization of the first farm loan bank in Wisconsin, under the present law, operated under the Wisconsin banking department. This, we believe, was the first practical effort in the country to get cheaper money for the farmer, on long time, and on an amortization system which would permit repayment of both principle and interest in semi-annual payments. Having had all this banking experience, and being preëminently an agriculturist and developer of lands, Mr. Faast is regarded as an ideal man for the position on officiary of the federal farm loan bank at St. Paul. Mr. Faast is at present a member of the university board of regents. He was formerly secretary of the Wisconsin Potato Growers' Association.

Has Extra House on Farm For Help.

Those who know something about the difficulties of getting satisfactory farm help and those who are familiar with the problems that come up in the home pertaining to the rooming and boarding of same will be interested in the following communication from one of our subscribers:

I have farmed for the last twelve years. On my 225-acre farm I have two houses, one for myself and one for my help, a married man. I give him $35 a month, wood to use the year around, one-half gallon of milk a day, garden spot, potato patch and $1 a cow a month for as many cows as he and his wife can milk.

When I first started to farm for myself I bought this 225 acres of land, running into debt for the whole farm. There was but one house on it. I went to work and built another for a married man and I have hired a married man in this way ever since. Now I am out of debt and have built one barn 45x50 feet and another 36x54, a silo 14x38, a hog house 5x42 feet with a feeding floor in front, and a shed 16x70 feet for my cows to run under when turned out, also a wood shed 14x28 feet. I own fifty head of cattle, seven head of horses, fifteen brood sows, five fall shoats. I now have twenty-four fresh cows and my man and his wife are milking most of them. I find this the best method of hiring help.

There is much to commend a plan of this kind because the wages are to some extent regulated by the amount of labor performed. If twenty-four cows are kept continuously in milk and these are milked by the hired man and his family this will mean the addition of $24 a month to the earnings. An industrious family will desire to add to the farm revenue as much as possible and this works to the interest of the farm owner, because if he is running his dairy at all carefully the more cows he handles the more profit will he realize from them. We are glad, indeed, to give this subscriber's plan, as it may contain a suggestion that will aid others who have to face difficulties in connection with the hired help problem.

Wisconsin Soils and Tobacco.

James Johnson, of the Wisconsin Agricultural Experiment Station, says that the tobacco plant will grow in practically any fairly fertile soil in the world. It is not true that only certain sections are adaptable to the raising of tobacco notwithstanding the fact that tobacco is usually grown in communities and is not a general farm crop. The growing of tobacco in limited areas is due more to the marketing and storage conditions than to the soil or climatic conditions. Mr. Johnson points out the fact that different climates produce different qualities of tobacco. In his discussion of the relation of soil to the growing of tobacco Mr. Johnson says the following:

The type of soil upon which tobacco is grown, exercises a relatively marked influence upon the development of tobacco sections. Tobacco is grown on a commercial scale upon a great variety of soils. But as in the case of climate, different soils produce different qualities of leaf, and are adapted for different varieties of tobacco which are used for different purposes. Some of the tobacco soils of Kentucky, Virginia, or those of Connecticut and Wisconsin, differ more markedly than their climate, and determine to a large extent the adaptability of these states for the prduction of certain types of tobacco.

The problem of selecting the best soil is, however, of great local importance. In fact it is a subject which must be carefully considered on each farm since frequently only a small part of the farm is suitable for tobacco culture. In Wisconsin the soils used for tobacco growing range from light, sandy loams to fairly heavy silt loams and black prairie soils, resulting in a corresponding difference in yield and quality of the crop. The tobacco sections in Wisconsin are principally in the southern and western portions, particularly in Dane, Rock, Columbia, Vernon, and Crawford counties, extending commercially as far north as Chippewa and Barron counties. But for the restrictions of the market, the industry would probably be taken up commercially in other sections of the state.

By the physical condition of the soil is meant the relative percentages of sand, silt, clay and organic matter or humus present in the soil. It has been shown that a fairly definite relation exists between the physical character of the soil and the character of tobacco produced. Soils containing a large proportion of clay tend to produce a thick and heavy type of tobacco, which usually cures out dark in color. On the other hand, light, sandy soils tend to produce a thin leaf, curing out with a light color and with less "gum" and more elasticity. The water-holding capacity of the soil is markedly influenced by the size of the soil particles and the content of vegetable matter and humus, and this in turn influences the character of tobacco produced. Manures, fertilizers and cultivation may also change the physical character of the soil in such a way as to influence quality in addition to their direct action as plant food.

Another important phase of the physical character of the soil is the mechanical condition or tilth. The tilth of the soil has a marked influence on the yield and quality, and it is a good plan for a grower to select a soil of good physical character, no only for its direct influence on the tobacco, but from the standpoint of the ease with which it is brought into and kept in good tilth. The maintenance of a high content of vegetable matter in a soil is an important consideration in most soils.

The chemical condition of the soil, or the amount of available plant food it contains, is influenced by its natural productiveness, the amount of fertilizer applied, and the amount of plant food which has been removed. In Wisconsin it has been the practice to select for tobacco culture only soils which are naturally the most fertile. Oak openings and deep black prairie loams have been the tobacco soils of the past. The "new breakings," especially, have been noted for the high quality tobacco produced. The decreased yield may correctly be attributed in part to a loss of fertility by constant removal of elements through cropping. Tobacco does not, however, as is popularly believed, remove directly on the average a much greater value of fertility than the average farm crop. Tobacco requires, however, a larger amount of fertility in the soil to produce a good leaf on account of its short period of growth, and more of this fertility is wasted through washing, leaching and weathering than in the case of the ordinary agricultural crops, requiring longer periods of growth. From the fertility standpoint, the grower should select a soil naturally productive, and maintain its productiveness by proper and economical fertilization, at the same time using all possible means to check the natural waste of the fertilizing elements. In general it is the best policy to grow the tobacco crop on the lighter soils of the farm even if it requires a greater effort to bring them to a sufficient state of fertility.

We have no doubt that the tobacco interests in Wisconsin could be extended with profit and that tobacco would prove a good cash crop for many of our farmers who now depend upon marketing all of their crop or nearly all of it through live stock. Those of our readers who are in any way interested in the growing of tobacco and who are thinking of going into this industry should confer with Mr. Johnson, care Wisconsin Experiment Station, Madison, Wisconsin, and ask him for a copy of Bulletin 277. This bulletin is just recently off the press.

John Norton Ames.

John Norton Ames died at Oregon, Wisconsin, March 2, 1917, aged ninety-four years. Mr. Ames was a native of New York, having embarked for the West in 1845 from Utica via the Erie canal, which in those days was the main artery of transportation. The journey to Racine, Wisconsin, which was made by boat, took nine days. It is now made in about nineteen hours.

The deceased was father of W. L. Ames, of Fairview Farm, near Oregon, Dane county, Wisconsin. The elder Ames was a pioneer farmer in this section. The late J. N. Ames' father, David H. Ames, was a veteran of the War of 1812 and lived to be over 101 years of age. The father of David H. Ames, Nathaniel Ames, who died in 1863, aged 102 years and four months, was the last surviving Revolutionary veteran residing in Wisconsin at the time of his death. "It is one of our greatest disappointments," writes W. L. Ames, of Oregon, "that we might not have cared for father to the age which his father and grandfather reached."

The Oregon Observer, referring to the death of J. M. Ames, says: "He was one of the oldest pages of local human history."

The same paper refers to the many changes which have occurred during the lifetime of this man who lived to be almost a century old. Mr. Ames had seen the time when it took weeks, even months, to bring news across the Atlantic which is now snapped almost instantly by cable; he had come down from the days of 25-cent letter postage to rural free delivery; the courier by horse to the telephone, telegraph and wireless; the ox cart to the palatial railway train, automobile and aeroplane; the flail to the modern swing stacker and steam-driven separator; the straw stack and log barn shelter to the modern inspected barn; 12-cent butter and 5-cent-per-dozen eggs and $4-per-ton bran to the prices of today; from the occasional monthly newspaper to the daily delivered to his door; from one story book a year to moving pictures changed nightly; from the old box stove to the fireless cooker; from the broom and dust pan to the vacuum cleaner; from the fiddle and accordion to the Victrola and the phonograph; from war by musket and sword to the rapid-fire gun; from farming for just enough to eat and wear to farming for profits and the comforts of the modern homes.

Mr. Ames was well acquainted with Madison when it was covered with brush. He led a clean and exemplary life; he was aggressive and willing to fight for what he thought was right. His record as a citizen, farmer and homebuilder merits for him a prominent niche in the history of Wisconsin.

Preventable Colt Losses.

Young colt losses seem to go in waves as if the whole matter were under the influence of climatic conditions. We have known cases where half the colts in a given community have been lost and yet possibly the following season there would practically be no losses. There are a few fundamental principles that should be understood by every mare owner. These are kept well in mind by the old-timer who has succeeded in the business, but the beginner is the individual who generally bears the burden of these losses. Recently the North Dakota Experiment Station has undertaken the dissemination of information having to do with the prevention of losses among colts.

According to the teachings of this station, the early troubles of the foal are apt to be navel ill, constipation and scours. Navel ill seems to be caused by germs that get into the body through the navel cord at birth. To guard against it have the colt dropped in a clean stall or in a pasture. Then the navel cord should be cut off about two inches from the body if it has not already been broken that close or closer, a string dipped in a mild disinfectant tied about the end of the cord and the cord painted over with a mixture composed of one part of the tincture of iodine and three parts of glycerine once a day till it dries off. The udder should be rinsed off with a weak disinfectant, too, before the colt is allowed to suck.

The first milk or colostrum is laxative and usually cleans the digestive tract within six to eight hours. If the bowels do not move a laxative as two ounces of castor oil can be given and a couple of ounces of warm water with a little glycerine injected into the rectum. It is hard to determine what causes scours or diarrhea in each individual case, but the common causes are changes in the composition of the mare's milk due to nervousness, overwork or changes in feed, allowing the colt to gorge itself from the full udder of a mare that has become quite warm from overwork and from filth in the food.

When the colt is four weeks old it will begin to eat a little grain; whole oats are the best. The colt should have a chance to nurse every two or three hours until it is about three months old. This is also for the good of the mare, as her udder will fill up in about three hours. not nurse or the there is danger t come damaged a lessened that the for the colt. If c fed dilute it with ter and two leve sugar to each quart should nurse un old, when it ca any setback. Gr without it a goo sult. The valuable that have been so much in demand this country are fed grain from the time they are old enough to eat till mature.

Discarding the Slop Bucket.

Farm labor is higher than ever this year, and it is by no means plentiful. Wages in many cases have more than doubled in the last ten years, and one result of this is that many a landowner is trying to get through without employing any extra help, excepting possibly by the day during the busy season. There is, therefore, more scheming to cut out useless forms of labor than at any time in the past, and any suggestion that will save steps will be quickly acted upon this year.

It begins to look now as if the time devoted to lugging the slop pail around the yards and feed lots is wasted time. While the average hog devours slop with marvelous zest, we are not correct in our assumption that he makes better use of the slop than he will of dry food. If this is the case, it is high time the swine breeder should be impressed by the fact that he can handle a bunch of hogs, when these are carried on dry feed, and expend on them just about one-tenth of the labor that will be required if most of the ration is fed in the form of slop.

Those who have used self-feeders have reduced the labor of caring for hogs to the minimum. Instead of laboriously feeding twice a day, the self-feeder is given attention possibly once or twice a week and the hogs themselves determine the quantity they will eat and the character of the ration if they have access to a variety. They will make cheaper gains in this way than if they are given ever so much attention and fed in accordance with an old-fashioned plan. Not only that, but they will make more rapid gains. Presumably this is due to the fact that they balance their own ration more accurately than can be done in any other way, and they digest the dry grain better than they do the slop. When grain is fed in a dry condition more time is spent in mastication and the starches are unquestionably partly digested before they reach the stomach. On the other hand, when wet feeds are used they are largely "bolted," resulting in at least part of the nutrients escaping digestion.

We hope that thousands of our readers will pass up the slop pail during the busy season this spring. Give the hogs a chance to feed themselves, and if a self-feeder cannot be used try them out on dry grain and water. You will have just as big pigs next fall, and in the meantime think of how many weary steps will be saved.

Need of More Horses.

"If the United States needed horses for military purposes it would be almost impossible to supply that need," John F. Ryan, head of a Canadian national bureau of breeders, said recently. His statement is based upon long experience and much investigation. He has interviewed and had business dealings with the inspectors of almost every belligerent nation. The excessive call upon the stock of horses in this country has very nearly depleted it. "My estimate is that the United States has shipped to France and England alone about 1,850,000 horses from October 8, 1914, to February 1, 1917," Mr. Ryan continued. "In addition to this Italy has taken about 160,000 and the Greeks about 30,000. In April of last year there were no real cavalry horses available in America. In the beginning it was possible to get several thousand in Kentucky; today it would be possible to get hardly a carload. The same holds true in other states."

a Success With Sheep.

ane County, Wisconsin, Has Splendid Knowledge and His Methods Have Brought Him High Honors.

the most impor- nsin's live stock t that is not the eep. That they with profit and than is nec- ding has con-

of Sun Prairie, who has and raising pure-bred sheep ly twenty years with a great d success. The mainstay of his floc are Shropshires and Hampshires. Besides being a breeder of sheep, Mr. Renk is a showman, and his prize rams, ewes and wethers have won hundreds of ribbons for him and cash money amounting to more than $10,000. To be in on the money so consistently, one must have the real type in the classes that are shown. Mr. Renk has most excellent herds of both the Hampshire and Shropshire breeds. In order to build up his herd he has been a frequent visitor to England, where he followed the shows from May until July, and at the conclusion of the season collected his herds from a great number of perfect specimens.

There are about 130 Shropshires ewes and rams on his farm at the present time. One lot of Shropshire rams, which he expects to show during the coming fair season, carry the excellent qualities of the breed in a superior manner. They are the attractive quality kind. Their fleece is of the dense, elastic sort, of good length, with a light cherry-colored skin underneath. They are well set up in the shoulders, which fit over the chest in the smooth approved manner. The shoulders are deep and wide. There is no dip behind the shoulders, the back being straight, with the loins well covered. It is in the head that they show their type particularly, however. There is one ram there that will be hard to beat wherever he is entered, as he has the masculine appearance and well-covered, woolly head, oined perfectly to the shoulders. Both s and rams show singularly well- far apart, particularly strong The flock has been a ambing this season, as onsiderable number ns on the show cir- the youngsters are do well.

The wintered in warm barns an s, with an opening toward the south, where they find plenty of exercise in the yards during the winter and in the field until late in the fall. The entire flock was out as late as December during the last year harvesting the rape crop from the cornfields. Mr. Renk sows his rape at the last cultivation of the corn. His method is perhaps as good

WM. F. RENK, SUN PRAIRIE, WIS.
Secretary of the Wisconsin Sheep Breeders' Association and one of the best sheep breeders in the state.

a one as can be advised. He hangs four ordinary syrup pails which have perforated bottoms along the front bar of the two-row cultivator and starts away. At the shaking of the machine these buckets leak out their seed along the rows and the cultivator covers them with a light covering of soil. During the time that the machine is not in motion the seed does not drop.

The Renks have been in the sheep business ever since the father took the farm as a homestead twenty years ago. It was not until 1900, however, that the pure-bred breeding of sheep was begun. Since that time rams from the Shropshire flock, and since 1907 from the Hampshire flock, have been sent to all parts of the United States. The Hampshires lend themselves especially well to crossing with western ewes, and the sales to our western states have been many and large. The demand greatly exceeds the supply the year around.

Mr. Renk does not believe in keeping too big a flock, as he has had some experience in this. There is more danger from disease and losses of various kinds when the flock is large than if it is small, and better attention can be paid to each individual. So when his brother, who had previously been in partnership with him, moved to Idaho several years ago he decided to split his farm in half and on the 220 acres remaining breed fewer sheep with greater care. His success has been accordingly.

Each year quite a number of western sheep are fed on the farm during the winter and sold over the scales as soon as they have put on enough flesh to make this profitable. This year there have been about 700 sheep sold from the farm in this way and with present prices for mutton they have proved a good investment. Besides these, Mr. Renk handles about 200 head of breeding stuff each year. Since the war, importations have stopped, but previous to this frequent purchases of fifty to 300 sheep were made and resold to breeders all over the United States.

The many championships which have come to Mr. Renk in the show ring have been the result of careful breeding and constant attention in choosing breeding stock. Though not all have been firsts, a great majority of them have been in the money, totaling, as before mentioned, better than $10,000.

Mr. Renk feels that most farmers could raise a few sheep very profitably. His lifelong experience with sheep has shown him that a small flock can be profitably kept on nearly every Wisconsin farm. With a flock of twenty-five sheep, little labor and attention is necessary, except at certain times. For northern Wisconsin sheep are especially adapted. The clovers and brush growing on the land not yet cleared in these sections form excellent pastures for the sheep. Clearing the land in this manner is economical besides being profitable. Mr. Renk is not onesided about his advice in starting a man out. While he prefers the Shropshire and Hampshire breed, any mutton breed is a good one to start with. But the importance of a pure-bred ram at the head of these flocks must be observed. A grade or scrub ram, even though he be a fair individual, cannot transmit his qualities to his offspring as well as a pure-bred ram, because the pure bred has generations of good breeding behind him and the ability to transmit these.

Sheep can take care of themselves during the summer, as they are mostly on pasture. Some work is required in the winter for the proper feeding of the flock. Most farmers feed their sheep too little. The appearance of the sheep cannot easily be judged at a glance, as the wool hides the exact condition. If the flock goes into winter quarters in a thrifty condition they are more likely to come out well in their lambing period. Good clover or alfalfa hay with some corn fodder is a good enough feed for the sheep until about a month before lambing begins. The grain during the last month enables the ewes to have an abundance of milk when the lambs arrive.

Mr. Renk does not believe in any elaborate housing for sheep, but he is emphatic in advising a shelter that has no drafts and is warm and clean. All his sheds and buildings are so cou-

Funds Available For Roads.

More than $9,000,000 to Be Expended in 1917 Independent of That Voted in Bonds by Several Counties of the State.

THERE will be approximately $9,000,000 spent on Wisconsin roads this year. Of this sum over $4,000,000 in round figures will be expended under the highway commission and $931,000 will be state aid. At the spring elections

FIFTEEN-FOOT MACADAM OILED ROAD, WAUKESHA COUNTY.

four counties will vote on bond issues. It is proposed to issue bonds to the extent of $500,000 in Richland county, $400,000 in Polk county, $300,000 in Shawano county. There are other counties which are interested in the matter of issuing bonds for road improvement. These include Dane, Washington, Eau Claire, Green and Walworth. On account of proposed changes in the state laws these counties have deferred voting on proposed

A BEAUTIFUL ROAD IN PRICE COUNTY

bond issues and it is not improbable that some of them and perhaps all of them will vote on bonds for roads at a special election about September 1st. In addition to these bonds there is available in Wisconsin July 1st $385,000 federal aid. This money is contingent upon the state appropriating a like amount and at this time it seems

NINE-FOOT CONCRETE ROAD, FOUR-FOOT SHOULDER, WOOD COUNTY.

very probable that the legislature will take advantage of the opportunity, thus adding almost $800,000 more for road work. The $4,000,000 to be expended under the direction of the highway commission will be spent on what is known as the state road system. It is a condition of the federal funds which are to be available that this money is to be spent on what we commonly call the trunk line system connecting the cities and villages. There will be raised about $5,000,000 this year which is spent independent of the highway commission under the supervision of road superintendents, there being from fifty to 250 of these superintendents in each county and in some counties as high as 300 or 400. There is a bill before the present legislature, the purpose of which is to put all of the road work in each county under one superintendent so that such work may be uniform. At the present time county roads outside of what is called the state or trunk line system are built according to the numerous ideas of the superintendents. There is nothing in the law to keep one superintendent from building a nine-foot road and the one in the next community from building a sixteen-foot road. Some good results, however, have been obtained where superintendents work in harmony and where they take the time and pains to make study of the problem of building roads. In a number of counties the superintendents have had county conventions where they aim to arrive at the best and most economical methods for road work. In

NINE-FOOT LIME STONE MACADAM ROAD IN FOND DU LAC COUNTY.

addition to this road superintendents have secured a great deal of valuable information from road workers acting under the state highway commission. The state highway commission has endeavored to make its roads good samples for the road superintendents to adopt. There are approximately 76,000 miles of road in the state and new mileage is being added, especially in the northern counties. This new mileage may be part of the state system or it may not be.

At present the state aid fund (which with the automobile road fund amounts to $931,000) is allotted on the basis of valuation. On this basis the county of Milwaukee, notwithstanding the fact that it has fewer miles of road than many other counties, gets about one-fifth of the state-aid fund. The federal funds available after July 1st, in the event the state meets the government requirements, are to be apportioned on a different basis. In handing out this money to the counties to be expended on trunk lines, area, road mileage and valuation are all to be taken into consideration on an equal basis. On this basis Milwaukee county would receive 6.75 per cent of the federal road money. There are about 61,000 miles of road in the state which are cared for and improved under the direction of road superintendents.

In the year 1918 there will be about

(Concluded on page 21.)

KING EIGHT

SEVEN PASSENGER TOURING: $1585

Low cost of operation and upkeep, coupled with high power and reliability, have made the King a favorite car among Farmers

THIS Company has found that Farmers want all the style, finish, comfort, and luxury required by the city man, but are interested in those qualities *only* after a car's mechanical superiority has been proved.

The KING chassis for 1917 is substantially the same as the one which earned this Pioneer Eight a reputation for efficiency, power and economy all over America and in fifty-two foreign lands. It was this chassis which made the famous sixteen KING stock car road tests last year, adding many notable chapters to automobile annals.

This remarkable mechanism embodies a practical experience possessed by few manufacturers and represents the eight cylinder V-type motor at the point of its highest development. It is the most economical car for its power now being offered and is built to endure the hardest service for many years.

Sixty horse-power, Model EE may be had in four luxurious body models; Touring, Foursome or Roadster, $1585; Sedan, $2150. Prices F.O.B. Detroit. There is a KING dealer in your vicinity. Write for descriptive matter today and let us tell you where to find him when you are ready.

All prices quoted may be advanced at any time

KING MOTOR CAR COMPANY, DETROIT, MICHIGAN

Thoroughness in Spraying.

In no undertaking is it more necessary that you do well, whatever you do, than in spraying. The points of weakness in this work which lead to failure are three. The chemcials are not rightly mixed, the time of application is not carefully chosen, and the implements used not sufficient for a good job.

Whatever formula you may be following in mixing the spray liquids, be exact in the quantity, and be sure that your chemicals are fresh. It is best for the small orchardist to get from the drug store the needed material, all ready for the mixing with water. It will cost more than to get the ingredients and dissolve at home, but you are safer with the prepared sprays. Leading fruit men testify that they have the best success with a mixture of lime sulphur and arsenate of lead. You may buy these all ready for the dilution, with full instructions on the package.

Plan for not less than three applications during the season. The first should be given before the bloom opens. When the buds are well developed, enough so that the pink begins to show through the green in the most forward specimens, give the dose. Do it promptly. Let nothing make you delay it. Should there chance to be very warm days just then, growth is very rapid. Also bug work is expeditious, and two days' delay may work untold injury. Sometimes rainy weather comes at just the time you should do this work. Better be a little ahead of bad weather, even if the buds have not quite reached the stage named above, than a little too late. Be guided by common sense, for weather conditions must always be considered. The rules name the best time—come as near to that as possible—and it is better to be earlier than later.

The second spraying will come about two weeks later, or just after the petals fall; the time will depend upon the character of the season. Hot and dry weather will shorten the interval between the first and second spraying, and cool, wet weather will lengthen it. But, when about four-fifths of the petals have fallen, and only the later buds of the clusters show color, repeat the spraying. At this time the fruit will be set. The little apple will be standing straight up on its stem. It happens that the weak point of the fruit, where the larva of the codling moth usually eats its way into the apple, is right at the calyx end. If, at this time, the poison spray is sent up into the tree top, it will fall directly on this upright calyx end, just the place where it is needed to destroy the enemy.

In a very few days the weight of the young fruit will bend the cluster stem, and the calyx end will point earthward, and in that condition the poison cannot be lodged where needed. From this fact comes the necessity of doing the second spraying without delay. Doing it at the right time makes all the difference between a good crop and a poor crop. If the application is timely, you may save three-fourths of your crop, but if put on after the position of the fruit is reversed, you will do well if you save a third of it.

Give the third spraying about three weeks later. This is expected to catch the later hatch of the apple worms, and also the lime surphur will clean up the scab spoors, which will be developing at that time. These are the three most important applications, but it is well to give still another about mid-July. There will be a second brood of the codling moth at this time, and while not so numerous as the first, it is capable of much mischief.

The third point which must not be neglected is applying the poison in the right way. There must be pressure enough to make a very fine spray and to throw it above the tree, so that the mist falls straight downward. The whole tree should be dampened to the point of saturation.

If your pump is too small, and the hose too short to reach the tree top, you can use an extension rod to get your mist well above the tree top. A barrel pump may be placed on a high platform wagon and driven between the rows, and this, for the small orchardist, is a great help in getting the right range. Whatever you attempt in spraying, make this resolve—to do it carefully, timely and thoroughly.

ALFALFA

Alfalfa is the greatest and Most Valuable New Plant for the Northern Farmer.

You Can Cut Three Crops of Splendid Hay Each Season.

It Will Succeed on Nearly Every Farm if Handled Properly and the right seed used.

Olds' Alfalfa Seed goes into nearly every state in the union.

We have a very large assortment grown in different sections and the seed is all of a fancy grade and all carefully tested for purity and germination.

There are no noxious weeds in any of our seed and it all shows a high germination test.

We offer the following stocks:

FANCY MONTANA ALFALFA
Grown without irrigation in Central Montana, the most famous section in the United States for producing a hardy strain of alfalfa.

FANCY DAKOTA ALFALFA
Strictly dry land seed from the celebrated Black Hills country of Western South Dakota. Some prefer this to Montana seed.

FANCY IDAHO ALFALFA
Pure bright seed from Central Idaho, showing a purity test of 99½ per cent. Very fine.

FANCY NEBRASKA ALFALFA
Nebraska seed has gained quite a reputation for northern sowing. Our stock grew in Central Nebraska and without irrigation.

FANCY NEVADA ALFALFA
Beautiful clean and bright seed with a 95 per cent germination.

FANCY KANSAS ALFALFA
At the Wisconsin Experiment Station Kansas seed is claimed to be as hardy as Montana seed. Our stock shows the highest tests of any seed we have.

GENUINE GRIMM ALFALFA
If you are afraid of winter killing sow Grimm seed. It costs a little more, but less seed is required per acre.

Samples of all the above showing tests sent Free on request.

THE BREEDING OF ANIMALS.

Valuable Volume From Pen of Well-Known Scientist.

Under the title, "The Breeding of Animals," there has recently come from the press an exceedingly valuable book written by Prof. F. B. Mumford, director of the Missouri Experiment Station. To begin with, few institutions have done better work than the Missouri station along scientific lines relating to live stock. An inumerable number of problems have been investigated by that station and most of the experimentation has been done under the direct or indirect supervision of Professor Mumford. In this way he has become fitted in a special degree to prepare just such a book as this. The volume fills an important need and, while its pages are well adapted to classroom purposes, they are equally well suited to stockmen's requirements. Some conception of the character of this book may be obtained by a perusal of the chapter titles which are: The Cell, Reproduction, The Breeding Season, Gestation and Lactation, Fertility, Sterility, Heredity, Inheritance of Acquired Characters, Heredity and Sex, Variation, Inbreeding, Crossbreeding, Development, The Practice of Breeding.

This volume sells for $1.75 and arrangements have been made with the publishers whereby it may be supplied to readers of The Wisconsin Farmer at this price.

If your neighborhood has not enjoyed the social benefits of a good farmers' club the past winter season see to it that a club is organized before the winter of 1917-18. A great deal of good has been accomplished by Wisconsin farmers' clubs during the season just closed.

FREE 1917 PLANTING GUIDE AND PURE SEEDBOOK
Ask now! This beautiful 96-page four-color book describes 1917 varieties vegetables and flowers; handsomely illustrated; beautiful home grounds, flower and vegetable gardens, landscaping, shrubbery, orchards, farms. A dictionary on gardening! Flower lover's delight! Berry grower's book! An encyclopedia! Most wonderful gardening guide catalog ever published. Better than our famous 1916 book. Don't miss it. A Few Pointers On Gardening.

Handling of Soils and Fertilizers.---How to Prepare the Soil. ---By J. G. Moore, of the Wisconsin Experiment Station.

WHILE practically all types of soil may be used for gardening, the garden soil should, if best results are to be attained, possess certain characteristics. The first consideration is the texture. The terms commonly used to denote the desired texture are fine and loose. By looseness we do not mean that the soil particles are far apart, but that they are not cemented together in large masses commonly called "clods." A soil may be too loose to be best adapted to gardening, but there is much greater danger in its not being sufficiently loose. Sandy soils or sandy loams are quite likely to possess these desired characteristics, while they are quite likely to be absent in clays or clay loams which have not been properly handled.

If a soil is lumpy and it is difficult or impossible to secure fineness of particles by the usual tillage methods, the soil should be "modified." By this we mean merely treating the soil so that its particles will form less readily into larger masses. There are a number of methods of treating heavy soils to assist in bringing about the desired looseness. On some soils this may be accomplished by increasing the organic (vegetable) content of the soil or by the addition of lime, while on others, sanding or the use of ashes may be necessary. Lime used alone will only accomplish the desired result when the compacting of the soil is comparatively slight, although it will help to correct the unfavorable condition on soils in which compacting is bad. Use ten to twelve pounds of stone lime per square rod. Put in small piles in the garden and cover with moist soil. Allow it to slake, mix with soil and distribute. Then work it into the soil.

Organic matter is an important factor in correcting this condition in all heavy soils and, while it will not in all cases do away with the trouble, it should be the first method to be used in the modifying process. Many of our garden soils are hard and compact and give poor results because we have neglected the organic content.

The common method of increasing the organic content of the soil is by putting on manure, preferably well-rotted manure, and thoroughly incorporating it into the soil. Where manure is not available, rotted lawn clippings or leaves may be used. Tops of plants grown in the garden, if not diseased, also help to keep up the supply, if worked into the soil. Another method is by using green manurial crops. Oats, barley, buckwheat, turnips, field peas or other crops which kill with frost may be sown after the early garden crops are removed or between the rows of late crops and then worked into the soil the following spring.

While a garden soil should not be water-logged, it is essential that it hold enough water for the needs of the crops. The two essentials for good water holding capacity are a fine soil and a large amount of decaying organic matter. Therefore, if we look after the texture of the soil properly we will provide for its retention of a goodly moisture supply.

The demands of vegetable crops upon the soil, when the garden is cropped to its fullest capacity, are very heavy. There is usually little danger in getting the garden soil too fertile, but it is possible to injure the plants and at times the crop by the application of excessive amounts of certain forms of plant food supplying materials. The fertility of the garden soil is most often maintained by the use of stable manure. Horse manure is most commonly used, but all other kinds may be used, if available. Hen manure is much prized as a garden fertilizer, but as it has a very high content of certain plant foods it should be used more sparingly than the coarser manures.

The coarser manures are more desirable when well rotted, but may be used in the fresh condition, if proper care is exercised in working them into the soil. The finer manures and fine, well-rotted manures are frequently used as top dressing. If fresh horse or cow manure is used it is advisable to incorporate it into the soil in the fall. This permits of some decay before planting time and there is less liability to unfavorable effects upon the availability of soil moisture. While it is possible to use substitutes for manure, it is scarcely advisable if it is possible to obtain manure because it is a desirable method of adding organic matter as well as increasing fertility.

Commercial fertilizers may be used as substitutes for manures for supplying plant food. In the main, they are less satisfactory and may frequently be injurious. Nitrate of soda is probably the most often used, although it is the commercial fertilizers most likely to produce injurious results. Some of the precautions in its use are: Do not apply too heavily. Three-fourths to one and one-half pounds per square rod is a fairly liberal application. Exercise care not to leave any of the chemical on the foliage, as it will cause burning. If a large amount is to be used it is best to apply it in two lots. Nitrate of soda may also be applied dissolved in water. One ounce to one gallon is the usual strength used. The plant food supplied by nitrate of soda is nitrogen. It may also be supplied by applying dried blood or sulphate of ammonia. One and one-half to two pounds per square rod is an average application. They are less readily available than nitrate of soda and their use is advised in place of nitrate of soda except when the chief aim is to give the crop a quick start. On some soils it may be desirable to apply a fertilizer carrying phosphorus. Acid phosphate or ground bone are valuable for the purpose. Two to two and one-half pounds per square rod should be sufficient in most soils. Usually it is not necessary to supply potassium to a home garden soil. Large amounts of potassium are detrimental to certain crops and, therefore, there should be good evidence of its deficiency before using it.

The first thing to take into account when considering the preparation of the soil is whether it is desirable to increase fertility, add organic matter, or modify the soil. If any of these are to be accomplished the material should be distributed before tillage begins. It should be spread evenly and if coarse should be well broken up.

The second consideration is the disposition of the corrective material and the breaking up of the soil. Plowing will be advisable on the larger tracts, but spading will have to be resorted to on the average city garden. Plow or spade deep, unless an unfavorable subsoil comes close to the surface. Even with this condition it is well to work in a little of the subsoil each season and gradually deepen the surface soil.

In spading, the spading fork is preferable to an ordinary spade, as it breaks up the soil better. Pulverize the soil as you spade by striking the inverted spadeful with the tines of the fork. Work in the manure or corrective material thoroughly. At times spading twice may be desirable.

When breaking up a sod or when early vegetables are desired on the heavier soils the breaking up process should be done in the fall. In other cases plowing or spading may be done in either fall or spring. Avoid working the soil when wet, especially if it is clay or clay loam.

The third consideration is the establishment of the seed bed. This means pulverizing and leveling the soil. The harrow and disk, on the larger gardens, the rake and hoe for the small gardens, are the chief tools used in this operation. Work and rework the soil until there are few, if any, lumps or clods left. If these are broken down with difficulty, moisten or leave until after a rain. The ideal condition which is desired is a surface soil which is nearly dustlike.

Will Steam, Hot Water, Warm Air, Vapor or a Pipeless Furnace Heat Your Home Best?

Only Heating Experts Can Answer This Question For You

The answer to this important question can be determined by our heating experts with positive certainty. Each of these types of heating systems is best adapted for certain conditions. All you have to do is to give our engineers the necessary information. This will place you under no obligation. Their advice will be entirely unprejudiced—they favor no particular type of heating system—we manufacture all types. They will simply tell you what system will heat *your home* most economically and efficiently.

THE selection of the type of heating system to fit your house means comfort, fuel economy, convenience, health, years of reliable service. A system that does not fit your house means discomfort, waste of fuel, trouble, danger to health and heavy expense. To know what kind of a heating system is best adapted for your conditions requires not only a thorough scientific knowledge of certain physical laws, but also a lot of sound common sense and practical experience. Our heating engineers know how to figure it all out with absolute accuracy. Our experience of 60 years as manufacturers of heating systems makes our advice especially valuable. Over 119,000 houses are heated with Mueller Heating Systems, and each is giving perfect satisfaction, because it is of the type and size exactly suited to the house in which it is installed. Mueller Heating Systems are sold only through the most responsible dealers.

MUELLER HEATING SYSTEMS

Hot water, steam or vapor systems are recommended where the size and number of rooms to be heated and other conditions make their use most economical and desirable. The correct design and superior construction of Mueller Heating Systems have made them standard throughout the United States.

Filling out and mailing this coupon will not place you under any obligations. It will simply bring you exactly what this advertisement offers—the advice of heating experts, which will tell you with absolute certainty just what size and type heating system will be best suited to your house—will give you the most permanent value and satisfaction for the money. This advice will cost you nothing. So you need have no reluctance about sending in the coupon. Clip and mail it now before you forget it.

L. J. Mueller Furnace Co.

Makers of Heating Systems of all Kinds Since 1857

204 Reed St. MILWAUKEE, WIS.

This Coupon Will Bring You the Answer FREE

An efficient warm air heating system costs less to install than a steam or hot water system. It provides heat quicker than any other system and is easy to regulate. With it you can keep your rooms comfortable even in the coldest weather.

The Mueller Pipeless Furnace has exactly same construction as the old reliable Mueller line, but without pipes or flues. Ideal for installing in old or new houses and buildings with small or partial cellars. Will heat whole house comfortably, dependably, cleanly and economically from one register. Saves 25 per cent in fuel.

L. J. MUELLER FURNACE CO.
204 Reed Street, Milwaukee Wis.

Gentlemen:
I intend to { build a new house / remodel my house / install a heating system } this spring or summer. I will have_____rooms to heat,_____ downstairs and_____upstairs. There are_____outside doors and_____ windows. Please send me your floor plan charts on which I can indicate dimensions and general arrangements of rooms. I am now heating my house with_____ I have been considering a { warm air / hot water / steam / pipeless } system.

It is understood that sending in this coupon does not obligate me in any way.

FARM MECHANICS

Questions and Answers.

Auto Engine Fuels.

What would be the effect of adding spirits of ether to the gasoline for an auto? What would be the effect if the ether were added to kerosene in a kerosene engine? Will half gasoline and half kerosene make a good fuel for an automobile engine? How would this mixture work if either were added to it? What would you think would make a cheap fuel for an auto?

Answer.—Spirits of ether increases the power and makes the motor start easily. It is sometimes used to start a motor which is too cold to start on gasoline. It is dangerous, however, and its use is not advisable. Serious explosions have occurred from its use. Kerosene and gasoline mixed does not make a successful fuel for auto engines. We know of no reliable fuel mixture for automobiles that is cheaper than gasoline.

Disks Will Not Cut In.

I have a ten-foot Osborne disk, purchased in 1915. The disks are sixteen inches diameter. For some unaccountable reason they fail to cut into the ground as they should; no matter at what angle they are set, or how much weight is put on it. Sharpening the disks has no noticeable effect. I believe the disks are too much dished. Would it help to have them cut down in size? What would you suggest?

Answer.—A small disk cuts into the ground easier than a large one. If set at the proper angle, the more the dish the easier for the disk to cut in. The disks should be well scoured on the concave side and the bearings well lubricated so that the disks turn freely. The disks may be scoured with emery cloth, or with a wet, soft brick and water. If power is available a wheel made of canvas with emery glued to the rim may be used on an emery wheel stand. This kind of a wheel puts a nice polish on a disk very rapidly.

New Piston Rings.

Would one of the new type of piston rings on a piston help the compression much, or should all the rings be the same kind? How large an electric motor would be required to replace a two-horse-power gasoline engine? Would this motor run off a 110-volt direct current, or would a 220-volt current be required?

Answer.—One new ring if properly fitted to the cylinder should improve the compression considerably, but it would be better to replace all the worn-out rings, especially if you are having carbon trouble. A one-horse-power electric motor should handle the load of a two-horse-power gas engine, as the electric motor has a much more even pull. The electric motor also has capacity for carrying overload for some time, the limit being the time required for the motor to heat up dangerously. A motor will work very successfully on a 110-volt circuit if designed for that voltage. Order a motor for the same voltage as the current on the power line.

Electric Lights on a Ford Car.

I intend to install electric dash and tail lights on my 1915 Model Ford car. By installing the two lights in series, the dash light will act as a tell-tale on the tail light. I enclose sketch of the wiring. Please tell me if it is practical. Will the addition of two two-candle-power lights have an appreciable effect on the efficiency of the headlights? Do you know of any appliance that will make the headlights of a Ford car brighter at low engine speed by automatically switching all the current to the left headlight, or otherwise?

Answer.—Your sketch of the wiring has been misplaced. The wiring is very simple. Run a wire from your switch to the dash light; from the dash light to the tail light, and from the tail light to the frame of the car. Since the lights are connected in series, the lights will have to be of the same candle power. Their voltage should be the same as the voltage of the headlights.

You are overloading your magneto by running so many lights from it, but if the magnets and the insulation are in good condition you might be able to do so for some time without serious injury to your machine. There have been voltage regulators made for Ford lights, but we are not sure that they are on the market at the present time. The principle of these regulators is that of a fly ball governor; the governor shifting an arm of a rheostat so as to cut down the amount of current supplied the lights at high engine speeds. The apparatus could also be made to work as you suggest; switching all the current to one light when the engine slows down.

Copper Tube Boilers.

In a recent issue, mention was made of a steam boiler made of copper tubing. Will you please publish a diagram of such a boiler?

Answer.—A boiler of this type usually has a tubular shell like an ordinary vertical boiler or feed water heater. The inside construction is quite different, however. The water is contained in a series of copper tubes wound into coils above the firebox. The tubes are arranged so that the water is admitted at one end and the steam comes out at the other; or both ends of the tubes may be fastened in a header at the top or side, and the tubes filled with water all the time. Copper transmits heat very readily, and the tubes give a large heating surface; therefore, a boiler of this type heats up very readily. It is the common type of boiler for fire engines and automobiles.

Raising Water by Hydraulic Ram.

My house is located where it is almost impossible to get a good well. It is on top of a hill. About eighty rods from the house I have a dam that covers four or five acres with water. The dam is about fifty feet lower than the house. An inch and a quarter pipe runs through the dam at the bottom. Could I use a hydraulic ram to force the water up the hill into a cistern near the house? There is always five to eight feet of water above the pipe in dam. If this could be used, how much water would be put into the cistern in twenty-four hours? What size of pipe should be used for the discharge, and how deep should it be buried?

Answer.—You should be able to use a hydraulic ram successfully under the above conditions. If possible, place the ram ten or twelve feet lower than the water level in the dam. The supply pipe from the dam to the ram should be about forty feet long. The ram will lift about one-tenth of the water running into it. If the supply pipe is one and one-fourth inches, the discharge pipe should be one-half inch. This outfit should force 500 gallons into the cistern in twenty-four hours. If you use a two-inch supply pipe the discharge pipe should be three-fourths inch. This outfit should force 1,000 gallons into the cistern every twenty-four hours. The discharge pipe should be buried three to four feet deep to protect it from the frost.

Auto Storage Batteries.

How long is the average life of an auto storage battery? How should they be handled to keep them in good shape? If they are dead, how much are they worth for junk?

Answer.—The average life of an auto storage battery is about two years. Their scrap value is not very much, being equal to the value of the scrap lead, copper and rubber. Keep the battery well charged. Occasionally add enough distilled water or clear rainwater to the cells to keep the electrolyte one-half inch over the plates. When the battery is fully charged the electrolyte should test not much less than 1.200. An instrument known as a syringe hydrometer is used to make this test. When the electrolyte tests too low, add enough pure sulphuric acid to make it test about 1.24 when the battery is fully charged. When mixing, always pour the acid into the water slowly. Never pour the water into the acid, as an explosion might result.

Charge the battery at least once a month, even if the battery is not in use. Do not either charge or discharge the battery faster than the rate specified by the manufacturer, as rapid charge or discharge injures the battery.

Disking Instead of Plowing.

Ideal Seed Bed May be Prepared Without Turning Soil Over in Slices.---By J. N. Shirley.

I WOULD like to make a suggestion that farmers break part of their corn ground, or any other ground, this spring with a common three or four-horse disk. I "suggest" rather than advise because I know farmers will not take my advice unless it suits them and possibly they may try a suggestion out of mere curiosity. But whether they try it or not I will give my experience.

I will try to stick to my text for a while, at least, but I don't know where I will be pretty soon because I am like the Irishman that was running from a train and saw a switch ahead of him and remarked, "If Oi can make the siding, Oi'm safe." I already see several "sidings" ahead and I may not run on the main track past any of them.

Several years ago we bought an old, run-down-at-the-heel (and toes) clay farm in Hendricks county, Indiana, and, as I failed to rent it, we moved onto this farm late in April. Of course, I wanted to sow some alfalfa on this farm and the neighbors told me that the field I wanted to sow it on had been in corn five years in succession. The standing cornstalks were not oversize by any means, and, as it was late and I had plenty to do on this old "heelless" farm, I concluded to try disking this twelve-acre field of cornstalks, and I did so without breaking, raking or burning any of them. I soon had a splendid seed bed prepared by double disking each way a few times to keep from ridging the ground. I sowed the seed twenty pounds to the acre, set the disks nearly straight and disked the seed in. I had fine success on this old, cold clay land (which I had inoculated with soil from an old field on another farm) and in ditching this farm eighteen months afterward I found alfalfa roots four feet in the hard clay subsoil.

I also used the disk to sow alfalfa on about fifteen acres of oats stubble that same summer. Will say I found the disking (riding, you know) much easier and faster than walking after a breaking plow, and I know it was easier on the team than to stumble over clods and to step into holes in plowed ground. Besides, I conserved the moisture better than I could have done by turning over slabs of that hard clay ground with air spaces under and between them, to say nothing of cornstalks turned under to stop capillary attraction even after I had finally succeeded in pulverizing the clods made by plowing. By disking I had no clods and no cornstalks either. Neither did I have a failure of alfalfa, which I surely would have had had I plowed that field in May and sowed it at once as I did after disking it.

Now, I don't even disk ground to sow alfalfa. I let Jack Frost "work over" a field that was cultivated in corn, oats, potatoes or tomatoes, and I sow, now, only about one-third of twenty pounds of seed per acre on "honey-combed" ground in January, February or March, and Jack Frost covers the seed for me, free of charge.

Here is another suggestion—but don't take it if you would rather "plow your ground deep" and then "work it down solid" again like it was before you plowed it (as I did for twelve or fifteen years). Remember this is not advice—only my experience. I know this is contrary to all the alfalfa instructions I have ever read, and I read everything about alfalfa that I can find, but we used to kill men with the old muzzle-loading musket and don't do it any more because we have a better way. We use repeaters, so excuse me if I repeat.

Last spring I disked my corn ground altogether, did not even use a spike-tooth harrow in preparing the ground, and I never had a better seed bed. The ground seemed spongy all season and of good heart. The disk lifts the soil and lets the air in instead of turning over chunks or slabs as a plow does, and the pulverizing is done thoroughly as you go, a little deeper each time you cross and recross the field. No trash is turned under to shut off the rain from below that is absolutely necessary in case of drouths that we sometimes have. Last May I disked a heavy coat of strawy manure and mixed it with the soil until it gave no trouble in cultivating the corn with a harrow or weeder. In fact, I did not intend to use any other cultivator in this corn. I meant to harrow it twice and then go over it about three times a week with a weeder. I have two of these weeders. I can go over ten acres of corn in five hours with the two weeders, thus preventing weeds, provided it doesn't rain and keep me out of the field till the weeds get a start. Prevention is better than cure and I like to prevent weeds by using the weeder. And the plow (cultivator) does much nicer work when it is preceded by the weeder. But here I am on the Irishman's siding again.

Will suggest that farmers try the disk and see how much better and cheaper it words and how much easier and faster it is for teams or tractors than to use a plow to make clods to pulverize after it rains, sooner or later.

SOON PREPARED A GOOD SEED BED BY DOUBLE DISKING EACH WAY.

A report for the year 1916 upon the business of Colfax, Wisconsin, creamery shows an increase of about $15,000. During the year, 974,299 pounds of cream were purchased and the creamery produced 292,247 pounds of butter. The average price paid for butter fat was the highest in the history of the business, being 39½ cents per pound. The amount paid patrons was $83,169.25. The average net price received for butter was 34.4 cents and the average net price for butter fat, 36.7 cents. The officers of the creamery are: President, W. J. Matthews; vice president, G. W. Paul; treasurer, O. N. Am le; director, M. O. Larson; secretary and manager, G. A. Harsh.

Wisconsin's way of spreading reliable information on the better methods of cut-over land development by means of demonstration trains is being adopted by the Spokane Chamber of Commerce, the Washington State College and the University of Idaho, in a joint project to be operated over the Great Northern Railroad in April.

Now is the time to order a few autumn-bearing strawberries.

Ideal heat keeps out spring rawness!

It is better for the family to keep a little heat going *all* through your home during these chill and damp spring days. Raw, wet weather is dangerous to health. *IDEAL heating keeps whole house warm and dry!* Only a small fire in the IDEAL Boiler is necessary to make *every room* as balmy as June.

AMERICAN RADIATORS & IDEAL BOILERS

So don't delay finding out about IDEAL heating by writing to us or asking friends who have IDEAL-AMERICAN radiator heated homes. Thousands of farm families in every state say that IDEAL heating is the one best feature in their homes for economy, labor saving, cleanliness, durability, and complete comfort satisfaction. The comfort of the home makes the success of the farm!

Basement or water pressure not necessary—don't wait!

IDEAL Boiler is set in cellar, side-room or "lean-to;" and same water is used for years. Put an IDEAL Boiler and AMERICAN Radiators in your house this year. Call up the nearest heating contractor and ask him to give you an estimate. Don't put off any longer, suffering the chills and ills of old-fashioned heating methods during these raw springs and severe winters.

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

A No. 4-22-W IDEAL Boiler and 420 ft. of 38-in. AMERICAN Radiators, costing the owner $280, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions.

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

Let us send you valuable book (free)

Write today for copy of "Ideal heating." Fully illustrated and gives valuable heating information which we want you to read carefully. Puts you under no obligation.

Sold by all dealers. No exclusive agents.

IT'S natural that a gentlemanly feeling should prompt one man to tell another about W-B CUT Chewing, so he, too, may enjoy the contentment there is in rich, sappy tobacco—and also avoid so much chewing and spitting.

The common-sense of it appeals to people with brains. There's no getting 'round facts, W-B will save a man money—a little chew lasts and satisfies. A 10c. pouch goes twice as far as ten cents' worth of the old ordinary kind of chewing.

Land Clearing Costs Reduced

The recent land clearing tests conducted by the University of Wisconsin revolutionized methods and established much lower costs. The leading kinds of stump pullers---hand and power---were represented. The dynamite used was

DU PONT

Red Cross Farm Powder

These tests proved the following important facts:

1st---The cheaper Red Cross Farm Powders will in most soils blast out stumps as well as the more expensive 30% and 40% grades. 2nd---The combined use of Red Cross Farm Powder and a stump puller is often the cheapest and best way to clear land. 3rd---Properly placed charges fired with a blasting machine greatly reduce the amount, strength and cost of the dynamite required. Average stump covered land can now be cleared at less cost per acre than before the war.

A Good Combination Barn.

Affords Abundant Room for an Average Sized Dairy Herd and Seven Teams of Horses.

STALLS for nineteen dairy cattle, three large box stalls, for fourteen work horses, two grain bins and a grinder room and storage space for 100 tons of loose hay is the capacity of the Hamilton county, Iowa, barn that is shown here. The main part of the barn is thirty-six feet in width. It is 100 feet long and the addition is 20x32 feet. The eaves are eighteen feet from the ground. The floors and the footings are of concrete and the balance of the structure is of frame built on a very economical plank frame design which was gotten up by the owner. It is a plank-framed barn without the troublesome crossbeams. It is possible to drive through the long way of the building if desired. The wide driveway across the barn is fourteen feet and high enough so that hay loads can drive in here and be hoisted to the mow. The stock all face the outside walls. The silo is located at the end of the feeding alley. The gas engine grinds the feed in the grinder room as well as does other small jobs here which is used as a farm shop.

FLOOR PLAN OF BASEMENT.

The barn is a large one and too large for every farm, but for a barn of the large type it is well and conveniently arranged. An estimate of the cost is $3,600; but this will not meet every farm's conditions.

A COMBINATION BARN WITH CAPACITY FOR 100 TONS OF HAY.

The Jug-Shaped Water Tank.

To the Editor:—I noticed in a recent issue of your paper a description of how to construct a large cement stock tank. While I think cement is all right for small watering tanks and troughs (and doubtless a few large tanks when properly reënforced and foundation put down below frost line), yet I find quite a large per cent, from some cause, eventually crack, especially if not finished the day they are started.

I had a storage tank made the past year that is much stronger than an all-cement one, and cost but little, if any, more. I made a circular excavation six feet deep by eleven in diameter on the comb of a gently sloping ridge near a drilled well. After establishing the inlet and outlet pipes, one of the latter near the bottom, the excavation was walled up even with the top of the ground with good clay brick, laid in cement mortar, one part cement to three of sand. Then we started drawing in an inch all around with each course of brick, at the same time keeping the outside wall plastered with mortar.

On reaching a height of fourteen feet from foundation we had a space left at top two feet in diameter. Then we gave the inside wall two coats of cement, finishing up at bottom with a two-inch concrete floor. This completed our "jug," excepting the stopper, which I made of inch timber, boring a small hole in the center to admit wire to connect float with windmill regulator.

Then I banked up dirt around the tank to within two feet of the top. This required a little more dirt than what was left from the excavation.

There are a few commendable features about a tank like this. First, by going a good depth you secure a solid foundation, also insuring a comparatively warm supply of water in winter and cool in summer. Second, being located on high ground, the water may be piped to several lots or pastures, and in many instances supply the water system for the dwelling. Lastly, it may be made practicaly vermin and dirt-proof.

The cost is about as follows:

2,500 bricks at $13 per 1,000 (at lumber yard)	$32.50
24 sacks cement at 50 cents per sack (at lumber yard)	12.00
Mason five days at $3 per day	15.00
Tender for mason at $2 per day	10.00
	$69.50

This does not include sand I got from a near-by creek for the hauling, nor hauling the other materials and handling the dirt. Joseph Warren.

Makers of limburger cheese in New York and Wisconsin are having a hard time this year. This is due to the scarcity of rennet extract. One factory in New York which formerly sold rennet at 75 cents to $1.25 per gallon is now unable to fill orders at $10 per gallon. In addition to this there is a scarcity of wrapping paper for limburger cheese. Most of this wrapping paper has formerly been imported from Germany. In Jefferson county, New York, there is talk of closing up several of the limburger cheese factories and this same situation is likely to affect Wisconsin.

UPPER WISCONSIN

Oats For Upper Wisconsin.

To the Editor:—We have been making tests with oats at some of our stations at Superior with the leading varieties of oats available at the time these tests were carried on from 1907 to 1911 inclusive; at Ashland from 1911 to the present time; at Spooner from 1911 to date; at Marshfield from 1912 to date. Our tests have had for their objects the following:

First—To find the best high-yielding variety of oats available.
Second—To discover oats most resistant to lodging.
Third—Oats resistant to rust.

We have found that lodging is most troublesome on the loam soils of central Wisconsin and most of our work at the Marshfield station is devoted to a solution of this problem. In the northern section, including the clay belt along Lake Superior, we have found the Wisconsin Pedigreed No. 5 and Wisconsin Pedigreed No. 4 (Early Gothland) as shown to be among the best varieties. Another variety with which we have had good success is the White Jewel. A hard-yielding variety which we have just recently bred at the Ashland station is a pure line strain of Irish Victor, known as Ashland Pedigree 1289. Among the most successful coöperators in producing No. 5 and Pedigree 1289 are A. G. Searing, R. F. D. No. 2, Ashland; E. C. Stevens, Washburn; Schmidt Brothers, Foxboro; Erick Brodin, Benoit, Wisconsin. We understand that Supt. Otto Drews, of the Manitowoc County Asylum, has had very excellent results with Pedigree No. 4. For the sandy section tributary to Spooner I am inclined to think that Wisconsin Pedigree No. 5 is one of the best to sow. At least our tests at Spooner have shown this variety very good and a consistent yielder. At Marshfield we have had the best results in our station experimenting with Pedigree No. 4 (Early Gothland) so far as yield and resistance to lodging are concerned and we have also had good results with a pure line strain of the White Jewel. The latter is not available for distribution this year, but is going in increased plots this season.

E. J. Delwiche,
Associate agronomist, college of agriculture, Madison Wisconsin.

Upper Wisconsin Notes.

Oneida county has the first farm loan association with $46,000 subscribed and twenty-two farmers represented.

The Hillsdale Shipping Association, Barron county, handled about $27,000 worth of live stock the past five months.

Following a talk at a county institute recently at Amherst, thirty-one farmers signed an agreement to have their herds tested for tuberculosis.

Nineteen farmers in price county have agreed to keep accurate farm records in 1917 and twenty-two have recently started to weigh milk from each cow and keep an accurate record of the same.

Marinette County Farm.

To the Editor:—The Marinette, Wisconsin, County Farm is one of the few institutions of its kind in the entire country which is run on a paying basis.

Here 220 insane persons are cared for and about forty poor people provided for. In addition to these expenses $2,000 was returned to the Marinette county treasury last year.

This farm has been made a paying institution through the raising of registered Holstein cattle and pure-bred Poland China hogs. The milking herd consists of fifty-five pure-bred cows. The farm is equipped with a complete creamery. The cream is manufactured into butter and the surplus is marketed. Cattle and hogs from this farm have been sold to many other counties and states. This shows the success of the live stock business in Upper Wisconsin. There have been many improvements on this farm in the last year. The main barn burned down a year ago and a new barn was built. Much new machinery and equipment have been bought.

It is interesting to note the wide scope of work carried on. The women do the sewing and fruit canning. They have made almost ninety rugs. They have done fancy work that has been sold and a Victrola was added to the women's department. Officers from various other states and counties have visited the Marinette County Asylum to study the methods used to develop this self-sustaining institution.

Mrs. Lucy L. Ferguson.

SEED CORN

Don't take chances on your corn crop. Don't plant seed grown south of you. Soft corn is worthless. Our pure, tested, northern-grown, hardy varieties make big crops of ripe corn. For 30 years we have sold the genuine Goddard's Silver King, grown, selected and tested by the originator here in this county. It outyields all other varieties in Nor. Iowa and So. Minn. Other splendid varieties. **Catalog free.** Write today. Ask about our "1,000 Club"—members get seeds at wholesale.
THE ADAMS SEED COMPANY
Box 50 Decorah, Iowa

In And Around Wisconsin.

A request has been received through the Wisconsin Live Stock Breeders' Association from farmers of Lee county, Virginia, who want to purchase 250 to 500 pure-bred Hampshire ewes. They desire breeding of either the 1916 or early 1917 crop.

A report from Buffalo county, Wisconsin, shows fifty days during the past winter when the thermometer was zero or lower. There were fifteen in December, fifteen in January, seventeen in February and three in March up to the eighth day. There have been colder winters in Wisconsin, but few where there was so much continuous cold. The first sixteen days in January, 1912, were all below-zero days, the coldest in Buffalo county being 45 degrees below. However, though 1911-1912 was a very severe winter there were five less days when the temperature was below the zero mark. The coldest day this winter was 36 degrees below zero. In March, 1912, there were nine days when the temperature was below zero, and on two mornings the little bulb in the thermometers went down to 18 below, which was exceptionally cold for March. Two of the below-zero days in March this year were 24 and 30 degrees below, respectively.

The question of whether or not flax is hard on land has been investigated to some extent by J. W. Ince, of the North Dakota Experiment Association. He states that a ten-bushel crop of flax will remove as much plant food from the soil as a 20-bushel crop of wheat. When flax is grown on the same land for several years in succession the crop grows smaller each year and it may entirely cease to yield after several years. This, Mr. Ince says, is due to a disease known as flax wilt, which increases each year and is responsible for flax running down quickly. This, of course, has nothing to do with the amount of plant food that it removes. It has been found that when flax has not been grown oftener than once in every five or six years it does well. By this time the flax disease has died out. Professor Bolley, of the North Dakota station, has developed a wilt-resistant flax. However, it is not advisable to grow flax oftener than once in five years.

Grant county, Wisconsin, has the distinction of being the Poland China headquarters of the state, that is, there are more good herds of the breed in this county than in any other county in the state. Realizing that something must be done to hold up the reputation of their breed, the Duroc Jersey men of Grant county got busy and during the past two months some fifteen or twenty of the best sows that money could buy were brought into this county. These men did not do as many others have done, try to buy where they could get the cheapest; instead, they tried to get the best, the cost being the second consideration. For instance, at one Wisconsin sale ten pure-bred sows were purchased by men from one town, Fennimore. These cost, on the average, about $85 per head. E. H. Heberlein, the leading auctioneer in that territory, has been preaching pure-bred swine for the past two years, and it was through his efforts that this good seed stock was scattered in the vicinity of Fennimore. The following men have purchased registered Duroc Jerseys during the past sale season: Wm. Magee, Wm. Edge, Elmer Knapp, E. A. Heberlein, Peter Gunderson, Henry Mitchell, Cornelius Peterson and Mr. Bartholomew, all of Fennimore; McKevitt Bros., Jacob Erwin, Ed Patterson, Ja., and Roy Horsfall, of Bloomington, and Runte Bros., of Cuba City. A move is on foot now to form a county association and with this excellent start we can see no reason why the venture should not prove very successful.

Getting a Fair Price For Milk.

(Continued from page 1.)

The association is organized simply to enable the farmer to secure his rights as he sees them. Mr. Jeffery says that other forces making profit out of milk are organized and that the farmers have done the same solely for the purpose of securing a fair price for their product and, furthermore, that any investigation covering the costs of producing milk and showing the profits made from the sale of milk will prove that in years past the farmers have had the short end of the stick. Mr. Jeffery says that no statement of the Monroe situation would be complete without giving due credit to the condensery company for voluntary advances which it has made. In January, 1917, the company gave a 5-cent raise above the contract price. In February, 1917, it gave a 10-cent raise above the contract price. In March, 1917, it gave a 15-cent raise above the contract price. These raises amounted to a 5-cent raise, covering the six months' period of the contract from October 1, 1916, to April 1, 1917. The generosity of the company in this regard was greatly appreciated and the raises, as stated, were voluntary on the part of the company. The average price per hundred pounds of 3.5 per cent milk for the period beginning April 1, 1917, and ending September 30, 1917, is $2.12, or 7 cents more per hundred pounds than the average actually received for the previous six months' period. The condensery at Monroe receives 90,000 to 100,000 pounds of milk per day and the receipts have been as high as 148,000 pounds. The best of feeling at this time seems to prevail between the farmers and the managers of the company.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. The rate is six cents per word, each insertion. Note the low cost to reach our 90,000 circulation.

THE WISCONSIN FARMER MADISON, WISCONSIN

BUSINESS CHANCES.

FREE for six months—My special offer to introduce my magazine, "Investing for Profit." It is worth $10 a copy to anyone who has not acquired sufficient money to provide necessities and comforts for self and loved ones. It shows how to become richer quickly and honestly. Investing for Profit is the only progressive financial journal and has the largest circulation in America. It shows how $100 grows to $2,200; write now and I'll send it six months free. H. L. Barber, 509-28 W. Jackson Boulevard, Chicago.

TAIL HOLDERS.

COWS' tail holders, post paid: 10 for $1.00; sample 12c. F. C. Gieseker, Elmwood, Wis.

FARM LANDS.

NORTH Dakota in all essentials—soil climate, crops, people, is a second Iowa. Because of heat, wet and rust the 1916 grain crop of North Dakota was short, yet government reports show $167,544,000 or $2,253 per average farmer. In last 7 years average farmer in North Dakota produced $1975 worth of crops; in South Dakota, $1,639; Iowa, $1,631; Illinois, $1,437; Minnesota, $1,396; Wisconsin, $901. Now is time to get North Dakota land, while price is low. No commission to us. Great opportunities open. Write for our direct dealing plan, booklets, maps, etc. J. S. Murphy, immigration agent, Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minn.

OREGON & CALIFORNIA RAILROAD CO. grant lands. Title to same revested in United States by act of Congress dated June 9, 1916. Two million three hundred thousand acres to be opened for homesteads and sale. Timber and agricultural lands. Containing some of best land left in United States. Now is the opportune time. Large sectional map showing lands and description of soil, climate, rainfall, elevations, etc. Postpaid one dollar. Grant Lands Locating Co., Box 610, Portland, Oregon.

GET a farm home in rich corn and clover belt of Northwestern Wisconsin along new Soo Line, 50 miles St. Paul-Minneapolis. Landseekers all say: "I saw nothing better." THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

The Amount of Mixed Grain For Poultry.

One of our subscribers says that he has 300 Brown Leghorn hens and he has on hand a plentiful supply of corn, oats, bran and meat scraps. He also has some alfalfa hay and desires information in regard to the amount of each that he should use.

In addition to the grain feed, we would suggest to mix some wheat along with your corn and oats. Providing wheat was used you would not need the quantity as required of corn or oats at this season of the year.

Although at the present price of wheat many poultry raisers are entirely doing away with the use of wheat, and are cutting down the cost of feeds by feeding more green feeds, such as sprouted oats. Green food is especially valuable in feeding for winter eggs. Succulent greens should be fed as religiously as grains during the winter months. Not only do they promote health and higher efficiency of the egg-making organs, but they save on the grain bills.

Give your flocks enough to eat of enough different grains, after an allowance of a maximum of various green foods, sprouted oats, steamed alfalfa or clover, because of their cheapness, and the ration is then properly balanced. Your alfalfa hay will nicely answer this purpose as green feed, providing it is heavy and not too coarse.

As to the amount to feed, a visit to the henhouse after the birds have gone to roost and an examination of the crops will indicate the correct amount has been fed. Approximately twice as much grain should be fed at night as in the morning. In the morning feed half a handful to each bird; at night double this amount.

A good grain mixture would consist of 100 pounds cracked corn, fifty pounds oats, and fifty pounds wheat. In addition to 100 pounds bran, add fifty pounds corn meal, fifty pounds wheat middlings and fifty pounds meat scraps. This, together with the above grain mixture and steamed alfalfa, gives you a variety of feeds that should give you a good egg yield during the winter.

A Few Chicken Ailments.

To the Editor:—One evening in passing along the outside of my chicken house I heard one of my hens breathing as though she had the asthma. I went into the house, located the hen, took her to the dwelling house, told my wife to take about as much sulphate of iron as she could place on a nickel and fold a small piece of paper as though she was going to roll a cigarette. We then placed one end of the paper down the hen's throat with the powder in it, then blew into the end and by so doing it sent the powder down where I wanted it placed. It was a simple treatment, but it did the work and the next morning she was as well as ever. I have used that remedy several times since and it has never failed to stop the hard breathing and I have told others of the remedy and I have never known it to fail. I do not know what caused the hard breathing, but I do know that it was difficult for the hen to breathe and the treatment was a success.

Going light is a disease that resembles what is known as liver trouble. The birds become quite light, almost as light as feathers and the comb becomes pale at first, then turns dark, the hens drink a great deal and eat but little. In such cases, feed more food containing protein, as this seems to help some, and in addition to this give the affected bird one teaspoonful of muriate ammonia in each pint of drinking water and keep all other water from it. I have not had much experience with fowls going light, but those that I have had were troubled with enlarged livers, as I discovered by opening the birds at the time of death. It is a disease that is difficult to treat successfully unless taken in time.

Cholera is a disease that soon takes the whole flock unless taken in time and even then it is a dreadful thing, but bowel trouble is not always cholera and many that think that they have cholera in their flocks have nothing but a bad case of bowel trouble which is often caused by the manner of feeding. Do not feed too much scraps or cut fresh bone, as they have a tendency to loosen the bowels, and if you should have bowel trouble place bran and corn meal, equal parts, dry, before them and let them have that for a time, as it will help in the matter a great deal.

Roup is one of the most deadly of all the diseases that chickens are heir to and is difficult to eradicate from a flock when it has once got hold of it. The first symptoms are sneezing and a slight running at the nostrils. Unless checked the discharge, which has a very offensive odor, thickens and fills up the nostrils, the head and the face become swollen, air bubbles show in the eyes, the comb turns black and in a few days the bird dies unless relieved. This disease is very contagious and the moment that a person finds a case in his flock he should remove it immediately and begin treatment of it, although I believe that the best treatment that can be given is the hatchet. There are many roup remedies on the market, but some seem to do no good. Every poultryman should keep a remedy on hand and the following is as good as any if used as soon as it is thought that roup is in the flock and it is a good thing to use as a preventive also. Dissolve two ounces of permanganate of potash in six pints of water. Completely submerge the fowl's head in this solution and hold it there as long as the fowl can stand it without choking to death. Repeat mornings and evenings. Next dilute some of the same solution, making the water of a red color, and give them this to drink. To be more exact about this solution, it is made by taking the solution recommended for the dipping above and dilute with four times its measure of water. I once treated a bad case of roup, so bad that I had to remove the cheesy substance in the mouth with a piece of cloth on the end of a stick, and then used a little sulphate of iron powdered on the place from which I had removed the cheesy substance.

James Lawrey.

Many Farmers Snow Bound

A company of 200 men, women and children, including many who had been attending the Banker-Farmer Conference in Madison, were snowbound at Grand Rapids, Wisconsin, en route home. The Wisconsin Farmer has been asked by members of the party of farmers to express their appreciation of the attention which was paid them by the people of Grand Rapids. Grand Rapids women prepared breakfasts for the women and children who were held up for three days by the storm. The Elks Lodge, Merchants' and Manufacturers' Association and the Women's Federation spent a good deal of time and money helping to take care of the stranded party. On one evening a big supper was served free in the Elks club rooms, the building and service being a compliment on the part of the lodge and the "eats" the well-received offering from the merchants' association. The farmers who enjoyed this hospitality, which they say they will not soon forget, were from the Tomahawk, Merrill and Mosinee neighborhoods.

How the Raising of Silver Black Foxes Yields Such Big Profits

Many interested persons have asked just how my Silver Black Fox Ranch was able to pay 40% Cash Dividends, and the answer is, "because my foxes were not bred from wild stock, (foxes from the wild do not usually breed true to color) but from RANCH-BRED Stock of the HIGHEST QUALITY—producing the choicest and most valuable furs in the world."

You also, by raising Silver Black Foxes from stock bought from me, can realize enormous profits, because being Ranch-bred and of the Best Quality, they will breed true to color and with a Fixed Quality of Fur.

The average yearly cost of feeding a pair of Silver Black Foxes is only $20.00.

A single Silver Black Fox Pelt has brought as high as $3,000.

Collins' Complete Information and Service includes our advice and the assistance of an experienced fox man from the time you start erecting your fox pens until you have realized a handsome profit on your investment.

If possible, come to Reedsburg and learn more of the Fox business. In the meantime, get my FREE book, "THE SILVER BLACK FOX INDUSTRY," just completed, which fully describes every detail of this pleasant and most profitable industry.

Cost of Producing Milk.

Just before the rapid upward trend in feed prices began the federal department of agriculture made an investigation of the cost on producing milk on four dairy farms in the states of Wisconsin, Michigan, Pennsylvania and North Carolina. While the figures used may be a little low as compared with present prices, nevertheless the work brings out several phases of the milk production problem which are finding a practical application at this time. Each farm was typical of the region in which it was located and represented the dairy practices as carried on by the better class of farmers in that territory. The Wisconsin farm provided more pasture than any of the others, which accounts to a considerable extent for its lower feed cost per cow, and on the Michigan farm, which has a high feed cost, the cows were stall fed practically all the year around. The herds varied in size from twenty to fifty cows.

The most important item in every case was feed cost. It equaled approximately 50 per cent of the total cost of milk production on the farms where the cows were pastured during the summer months with little or no grain. On the Michigan farm, however, where a grain ration was fed throughout the year, it was nearly 60 per cent of the total cost. The actual figures on yearly feed cost per cow were $49.23 on the Wisconsin farm, $71.77 on the Michigan farm, $53.77 on the Pennsylvania farm and $68.06 on the North Carolina farm. On each farm the concentrates were supplied in a mixture which varied in price from $20 to $30 a ton, according to local conditions, and which was made up of corn, bran, oil meal, cottonseed meal, gluten meal, dried beet pulp and ground beans, the combination and kind of feeds used being different for the different farms and for different years. Clover, alfalfa and mixed hay made up the bulk of the dry roughage used, except on the North Carolina farm, where home-grown hay made of peanut vines, soy beans, cowpeas, mixed grasses and clover, was fed. In Wisconsin, Pennsylvania and North Carolina alfalfa hay was worth about $12.75 a ton, mixed and cloved hay $8.50 and corn stover, which was used to some extent, $3. On the Michigan farm these prices were about one-fourth higher.

The next largest item of cost was labor. Practically one-fourth of the cost per cow was chargeable to man and horse labor. It included the time required to care for and milk the cows, handle the milk and market the product. It was found that the necessary man labor varied from 170 to 260 hours per cow per year, and the horse labor from twenty to sixty hours. This item varies widely according to the number of cows kept and the work entailed in marketing the product. The maximum labor cost was on the North Carolina farm, where the herd was the smallest and the distance from market greatest, and the lowest labor cost was on the Pennsylvania farm, where a milking machine was introduced during the period that the records were being kept. The machine reduced the amount of man labor more than one-fifth.

The other factors in the cost of producing milk were building charge, equipment charge, use of bull, interest on investment, decrease in value of cows and miscellaneous items, such as veterinary fees, registration fees, ice and upkeep of farm. Collectively these items make up from one-fourth to one-sixth of the total cost of production.

By adding together all the charges which have been mentioned the total cost of keep per cow for one year was found to be about $102 on the Wisconsin farm, $125 on the Michigan farm, $103 on the Pennsylvania farm and $128 on the North Carolina farm. These figures, however, do not represent the cost of milk produced, because there are several credits other than milk, such as value of manure, calves, hides, etc., that must be subtracted from these figures before the net cost of production per cow can be found. When this was done and the result divided by the number of gallons of milk per cow per year the average cost of producing a gallon of milk was determined. For the Wisconsin farm this cost was 13.1 cents a gallon, for the Michigan farm 13.7 cents, for the Pennsylvania farm 15.4 cents and for the North Carolina farm 18.6.

The milk production per cow was much greater on the Michigan farm than on the Pennsylvania farm, which accounts for the fact that its cost per gallon of milk was less, although the yearly cost per cow was considerably higher. This phase of the problem, having to do with the individual efficiency of the cow, is one of the most important to consider in cutting down cost of production. In the investigation the records of individual cows on all four farms were grouped into several classes according to productive capacity and the results showed clearly that the cost of producing 100 pounds of milk was less with the higher producing cows. For instance, 100 pounds of milk from cows averaging 3,000 pounds yearly or less cost on the average $1.87, while the same amount from cows producing from 3,000 to 4,000 pounds yearly cost $1.36. This unit cost gradually decreases as the yearly production of the cows increases. A significant fact in this connection is that the difference in the cost of producing 100 pounds of milk is much greater between scrub cows and medium good producers than between good producers and very high producers.

A summary of the investigation indicates that the greatest factors in the cost of producing milk are feed, labor and the individual efficiency of the cows. This seems to be the opinion of many dairymen at the present time and many are finding that they can reduce their costs of production by substituting silage and other inexpensive feeds for more expensive ones, by saving labor with machines for milking and motor trucks for ma-

WHO AM I?

I am the fellow that milks with "MEHRING'S MILKER"

It makes me smile when I see poor guys pulling away by hand. GO WAY BACK AND SIT DOWN! You have made no progress since the days of Noah! You are a back number sure! Ha! Ha! There is more truth than nonsense in the above words. A dairyman is certainly foolish who does not avail himself of one of Mehring's Milkers. It will milk one or two cows at once, 20 cows per hour. A child 12 years old can operate it. Price $70 cash or $75 on trial. Also engine power milkers.

W. M. MEHRING Keymar, Maryland

THE INDIANA SILO

Fifty thousand are now in use on the finest farms in America.

If you are going to buy a silo—this satisfactory service rendered everywhere—should be of special interest to you.

The cost of all materials is advancing like the price of wheat and corn.

Why not save money by contracting for your silo now. It undoubtedly will cost you more next spring or summer.

Let us send you our proposition—to contract now for your silo and deliver it later.

We still have openings for a limited number of farmer agents.

INDIANA SILO CO.

25 CENTS CALF RENNETS We pay 25c each for salted rennets from milk-fed calves, if handled according to our directions. Little work to handle them. Write for directions. Address THE MARSCHALL DAIRY LABORATORY Madison, Wis.

See That Air Space
See That Double Wall

Note the concrete base and the *wood tires*.

The Wood Tire Hollow Wall Silo is *patented*. It is *different*, and every farmer who is considering buying a silo should make a full investigation of the claims we make for it.

Great Strength—Frost-Proof
Easy to Erect—Lasts a Lifetime

No hoops or guy wires are used, yet only one has ever blown down, and that in a cyclone of unusual violence.

Its simplicity; the ease with which it is put up; the excellent quality of the silage; the freedom from frost; the absence of mouldy silage; the elimination of shrinking, swelling and decay; its long life—these are things that are important.

We have a folder that shows how the WOOD TIRE SILO is built and tells about its many splendid features. This folder is FREE on request. A postal brings it. Write today.

keting the product and by culling out the low-producing cows to increase the average production of the herd.

Beginning With Pure-Bred Dairy Cattle.

To the Editor:—Success with pure-bred dairy cattle depends on the charcter of the man more than on any other factor. Men of no capital, but with energy, perseverance, ideals and judgment have made some of the most notable successes with pure breds. The man who has grade dairy cattle, whose herd does not show a steady increase in production from year to year probably will not attain very great success with a pure-bred herd. If he can first prove his ability that way he will likely make a bigger success with pure breds. No doubt, in choosing a breed, one will be chosen for which the beginner has taken a fancy, or one that he thinks will best supply his needs. Of the dairy breeds, except for breed type and difference in size, all are practically of the same conformation, but each has characteristics peculiarly its own.

In selecting the foundation of a herd of pure breds it is very important to make sure that the animals are not diseased in any way. See that any stock already on the farm are free of disease and that the new stock do not bring disease. Such maladies as tuberculosis and abortion are very hard to detect by the inexperienced and very difficult to get rid of.

Nothing appeals to the average beginner like success in the show ring; therefore, in making his first purchases he wants animals sired by some bull that has won fame there, without ever trying to find out if that bull has any daughters that are good producers, or whether he is from heavy-producing ancestry. Of course, in order to win in the show ring the bull must approach closely to the ideal dairy form, and he may even be a successful sire of show stock, but it is the scales and Babcock test that decide whether or not he is a sire of stock upon which it is desirable to build a profitably dairy herd.

A question that arises in the mind of the beginner is, "What age of animals should I buy?" It is generally understood that it takes a good deal of money to buy the best cows in a herd that are already giving milk. Those of limited means very seldom begin that way. Calves or yearlings seem the best way in the opinion of many. Others prefer two year olds safely in calf, and if I were starting with pure breds, that is the way I would begin. The first cost is very little more than for calves or yearlings, one is getting two for the price of one, his profits come sooner, and very often the sire of the calf will be a better animal than most beginners are likely to have at the head of their herd. If one buys from a breeder who is doing considerable testing, the animals he gets are sure to be made more valuable as a result of the records made by the near relatives.

I would try to select true to a certain fixed type with good-shaped, well-balanced udders, not appearing fleshy, and be sure that the animals show plenty of constitution. I would not buy upon looks alone, for the breeding is just as important, if not more so, than the type, although I believe that in the long run production is bound to follow type, and that type and production can be combined in the same animal. The pedigree should show good records not only in the first and second generations, but as far back as it is possible to trace them.

With the females selected, I would try to get a bull of the same line of breeding, so that his blood would nick in well with them. I would get the best sire I could buy, paying particular attention to the breeding, as it is the sire who has the greatest influence on the next generation, and if he is better than the females, the resulting progeny will be better than their dams. If I didn't feel capable of selecting such a sire myself, and had no one to do it for me, I would write to some old, reliable breeder, giving him the line of breeding of my females and ask him to select a bull for me, either from his own herd, or from some other. I believe that an old proven sire, when available, will give surer results than depending on what a young one will turn out to be.

W. H. O.

Building a Milk House.

To the Editor:—Every dairyman ought to have a good milk house. The following is a description of a convenient milk house which we recently built on our farm. It meets every need and is less expensive than most buildings of this kind. Beginning, a concrete wall was made six inches thick and eighteen inches high above the ground, the size of the building being 12x12 feet. Planed 2x4 studdings seven feet long were set up four feet apart (to accommodate doors and windows) along the wall. No sills were used. On these 2x4-inch studs 1x4-inch strips were nailed, standing flush with the outside of the foundation wall. On top of these studs 2x4 pieces were nailed for plates for the roof to rest on. The space between the studs was lathed, nailing to the one-inch projection on each side of the studs. A piece of board was temporarily put up at the middle of these laths to prevent springing.

On the outside of the studding at the bottom a board was nailed, the nails projecting enough to be easily drawn. The one-inch space between the board and lath was then filled with concrete. Add more outside boards, going up to the plate with the work. In case of one man working when two sides are up, the first lot of temporary outside and inside boards can be removed and used on the following sections. When the four walls are up and all the temporary boards removed, nail on the outside of the studding 1x6-inch boards to be painted white. On the lath inside plaster with good fiber plaster.

At one end of our house, three feet from the ground outside, one edge of a flat stone 3x6 feet was built into the wall for a loading platform. Concrete can be used in place of this stone. The door over the stone or concrete must reach above the plate in the gable a foot or more to make it high enough for an entrance. Roof boards and rafters are planed and covered with good ready-prepared roofing. The gables also are covered with the same, which is allowed to drop one inch below the plates to cover that joint.

A concrete water tank, to hold ten shipping milk cans, is in a corner at the side of the loading door. It is one foot above the floor and deep enough to immerse the cans to the neck. The waste water runs to a concrete tank in the barnyard for the stock. The floor and steps to the loading door are made of concrete. A well of good water is by the side of the cooling tank. A raised platform is built at the other end of the room to support a gasoline engine which is used for pumping. Hardwood timber was imbedded in this concrete platform, so that the engine could be bolted down firmly. There are two windows, one being on the line of the engine pulley, and quite low to accommodate the belt for doing outside work with the engine. A pit to allow a set of scales to be set on a level with the floor is made. There is also an entrance door on the level. This house is built under two large trees, the shade of which is very helpful in warm weather. Subscriber.

SHORT-HORN FUTURITIES.

Fifteen Moneys Offered at the Leading Fairs.

No more popular classification in the live stock shows has been made than that of the futurity classes, admitting junior and senior bull and heifer calves, made by the American Short-horn Breeders' Association at a number of the leading fairs and shows. At four of these shows, the Iowa State Fair, Des Moines; the Ohio State Fair, Columbus; the American Royal, Kansas City; the International, Chicago, the Short-horn association has appropriated for the futurity classes alone a total of $7,000. In the junior and senior bull and heifer calf classes at the Iowa and Ohio state fairs fifteen moneys are offered in the futurity stakes. The first, second, third and fourth winners each draw $25; the fifth, sixth, seventh and eighth winners each $20; the remainder $10 each.

At the American Royal and the International the first winner draws $65 with a slight decrease down the line, the twentieth winner receiving $20.

It should be understood that these prizes are in addition to the appropriations offered in the regular classifications for Short-horns at these shows. The appropriations made by the association for 1917 at the various fairs and shows aggregate $50,000. The purpose of these futurity appropriations, and this purpose is suggested in the number of prizes offered, is to encourage as many breeders as possible to exhibit their calves at these important shows—a substantial means of advertising. In order that the small breeder may have an equal chance with the larger breeders and experienced show men, the rules do not admit of substitution after the entries have been made. The distribution of the prizes at the larger shows is an encouragement to breeders to participate. At the last International, for instance, the prize winners represented twenty different states and Canada.

As was announced through the press recently, entries for the senior futurity classes closed March 1st; the junior futurity entries close May 1st. Entry blanks and full instructions for nominations or entries may be had by addressing the association office, 13 Dexter Park Ave., Chicago.

It is not far from the snow-covered and frozen grounds of early March to the spring rains and the first appearance of the April flowers. We will soon have to be up and doing in Wisconsin for the 1917 crop, and we should make it the biggest and best crop that the state has ever produced.

DE LAVAL

The First, the best Known and the Greatest

CREAM SEPARATOR

Better Now Than Ever Before

THE first practical continuous cream separator, the De Laval has easily maintained its original success and leadership for nearly forty years. Step by step, year after year, by one improvement after another, the De Laval has led in every single step of cream separator development and improvement.

The first belt driven, the first steam turbine driven, the first of every kind of hand turnable, the first disc bowl, the first blade bowl, the first bottom or suction feed, the first split-wing feed, the first feed-through-the-discs, the first self-centering bowl, the first automatically oiled—all these and a hundred other features of separator development and improvement have been conceived by De Laval inventors and perfected by the De Laval Company, most of them to be cast aside for something still better in the ever onward advance of De Laval construction.

The New 1917 De Laval

And now, in the De Laval machines for 1917, a number of new and still further improvements have been made, which make the De Laval machines of today much better in many respects than they have ever been before.

Their capacities are greater per dollar of cost; they skim cleaner under the more difficult conditions of separator use; they are equipped with the most improved speed regulator, thus insuring the proper speed necessary for complete separation; they are even better lubricated, and the bowl construction is even more sanitary than ever.

In other words, superior as the De Laval machines have always been to all would-be competitors and utilizers of abandoned De Laval features, the De Laval machines of 1917 are improved and superior in every way to all previous types and models of De Laval construction.

All these improvements and new features are described and explained in the new 1917 De Laval catalog now ready for mailing, but some of them are difficult to describe and make fully understood by words.

Be Sure to See a New De Laval

The new De Laval machines themselves best explain their new and superior features, and their use does this more completely and convincingly than even an examination of them. Every local agent is glad to afford opportunity for examination, and better still, for home test of a new De Laval machine.

But the demand for the new machines is a month ahead of the possible supply under the present difficult conditions of manufacture and freight distribution. More De Laval machines by half have been made in 1917 than ever before, but the De Laval Works is now ten thousand machines behind actual orders, and the demand is ever increasing.

Hence, the importance of securing a machine quickly if your local dealer happens to have one, and of ordering well ahead if he does not. And likewise, the importance of waiting patiently a little for a machine if need be.

A new De Laval catalog will be gladly sent on request, and if you don't know your nearest local agent, please simply address the nearest De Laval main office as below.

Polishing the Furniture.

The cleaning and polishing of furniture isn't an easy task. It requires a lot of "elbow grease" and it may look a bit discouraging if the varnished surfaces show scratches and bruises. But with care even these may be overcome.

If the wood is bruised, moisten the part with warm water, double a piece of heavy brown paper five or six times, moisten it thoroughly with warm water, and lay it over the bruise. Place a moderately hot iron on the paper until the moisture is evaporated, being very careful not to expose the wood to the direct heat of the iron. If, when the moisture has disappeared from the paper, the bruise has not disappeared, repeat the operation. Two or three applications will raise the bruise level with the surface, after which the polish may be restored by the usual polishing process. Dampen a soft sponge in clean, cold water and wash the surface to be polished. Then wipe it clean with a soft, damp chamois skin, wiping only in one direction. The chamois skin should be thoroughly wet with clean water and then wrung as dry as possible.

A mixture composed of equal parts of boiled linseed oil and turpentine is excellent for removing white marks or other discolorations and defacements. Apply with a soft cloth until the color is restored to the varnish. Then rub with a clean, soft cloth until all the oil has disappeared. This will remove the bluish white coating which collects on highly polished surfaces.

Another good cleaning and polishing agent is a mixture composed of equal parts of vinegar, turpentine and sweet oil. Moisten a soft cloth with this and rub until the wood is perfectly clean. Then rub with a clean, dry, soft cloth until it is dry. Be sure to get all the mixture off, otherwise it will become gummy and the surface will be dull.

A good grade of floor wax is sometimes used to polish furniture. Scratches and bruises may be removed in this way.

Polish should not be used on dull-finished furniture. Simply go over this with a soft chamois wrung out of water as dry as possible.

In the case of leather upholstery, remember that more leather wears out from dry rot than from use. Wash the leather thoroughly with a mixture of one pint of sweet milk and one pint of tepid water, dry with a clean, soft cloth and rub to a polish. A good bath with soap and water will do it no harm. If the leather is gone over in this way two or three times a year it will remain in fine condition.

Springtime School Lunches.

Here are some suggestions which help solve the difficult problem of planning school lunches at this time of the year:

Lunch 1.—A bread-and-butter sandwich, two cottage cheese sandwiches, a cup of prune whip, nut and raisin cookies, graham crackers and two apples.

Lunch 2.—A boiled ham sandwich, one plain bread-and-butter sandwich, one jelly sandwich, one orange, one glass of milk, and some nut and raisin cookies.

Lunch 3.—A whole-wheat bread-and-butter sandwich, two sandwiches containing nuts cooked, dressing or lettuce, as available, one cup of baked custard and two apples.

Breakfast leftovers hastily thrown into a dinner pail do not make good school lunches. The eggs, milk, fruit and vegetables—fresh or canned, as the case may be—which may be had so easily in the country will furnish good, healthful lunches if properly prepared. Such a diet will do more for the average youngster than all the "spring tonic" on the market.

The Normal Baby.

An average healthy baby weighs from seven to seven and one-half pounds at birth; fifteen pounds at five or six months, and twenty-one pounds at twelve months. In other words, the baby doubles its weight in six months and trebles it in twelve months.

The normal baby measures from twenty to twenty-one inches in length at birth, twenty-five to twenty-six inches at six months and twenty-eight or twenty-nine inches at twelve months.

The average weekly gain in weight is about four ounces. More rapid gains are made the first six months than in the second six months.

A Letter From the Coast.

To the Editor:—I have just been looking through a copy of your paper and to say that it makes me genuinely homesick is puting it mildly. Not that I am a native of your state; but I was born and raised in another of the good states where a blooded animal is recognized at a glance, and pure-bred poultry always holds a prominent place—the grand old Pine Tree state. "Looks just like the East!" exclaimed one of the girls as she came in from high school and glanced at the open page on my lap. "And I expect they know a thing or two about raising stock back there and perhaps they know what a boy could do to make a living after he gets his agricultural course," said the boy of fifteen.

AN ATTRACTIVE QUILT BLOCK.
The shaded portion to be made of dark material and the white portion of light.

So, we went through that little paper, page by page. I'm going to ask them if they know anything of the big Asiatic breeds of hens, Buff Cochins, Langshans and white and dark Brahmas," said another high school girlie. She is a great lover of poultry and, like the writer, her mother, prefers the big Biddies that give the fine carcasses and big red eggs. So, I expect the poultry department will hear from her.

I would like to add my mite of helpfulness to the Home Department, and then I'll "beat it," as the youngsters would say. Mrs. E. L. G. gives a fine recipe for baking ham. Here is my method of boiling ham:

Select a medium-sized ham. See that it is not too lean, for the cooked meat will be too dry. Wash clean in very hot water (I scrub with a clean, stiff brush), wipe dry and rub all over with flour. Then put into a pan large enough to hold it easily, slip into a very hot oven with an inch of hot water in the bottom of the pan to keep from burning only. Brown thoroughly, then turn, dust other side (which will be wet) with flour, and brown that thoroughly also. Then remove from oven, place in a pot deep enough to cover closely and fill nearly full of boiling water, cover tightly and boil steadily until the meat can be easily pierced with a steel fork. Browning well before boiling keeps all the juice and fine flavor in the meat, and, verily, it is a dish fit for the gods.

Some other time I will send a few other New England recipes.

I am greatly interested in rescue and prison work and I wish others who are interested along this line would write to our column. California Sister.

Makes Twenty Quarts of Hominy Every Two Weeks.

To the Editor:—As a reader wishes to know how to make hominy so that the black ends will come off will say that I think I can tell her how to make it, as we make from fifteen to twenty quarts every two weeks for the store.

Take a gallon of shelled corn and put in a kettle with a bucketful of cold water and a good, heaping tablespoonful of lye (any kind will do). Set over a good fire and keep boiling hard. Stir if the corn is inclined to settle to the bottom. As soon as the ends are soft and push off easily, drain off the lye and put cold water on the corn and wash until it is clean. If there are a few black ends hanging on they will come off while it is being boiled again in plenty of water. Boil until the grains are swelled and quite soft. Mrs. Emma Daringer.

Lightning Cake.

To the Editor:—I like Mrs. M. C.'s idea of preparedness in having our pickling and other recipes ready before we want to use them. Here is a recipe for "Lightning" cake. One cupful sugar, two cupfuls flour, two teaspoonfuls baking powder, pinch of salt, all sifted together. Measure one-fourth cupful butter, add one egg to this, then fill the cup with sweet milk and stir into the dry ingredients. Bake in gem pans or a loaf.

A good way to use paper flour sacks is to make a cover for your kitchen table, to use under the oil cloth. You will find that the oil cloth will last much longer. Open up the sacks and sew them together on the machine, using a long stitch and making a lap seam. Mrs. O. P.

Dried Hominy.

To the Editor:—Not long ago a member of the Home department asked for a recipe to can hominy. We think we have a better method, so I thought I would write and send it. We make our lye by saving wood ashes from the cook stove. We pour water over them and boil, then let settle and strain. Heat the lye and pour the corn in. When the skin comes off, wash through several waters and let stand in water over night. Then drain all the water off and put in a sack and dry, turning frequently to keep from souring. We find it easy to dry hanging over the register, but any place that is warm will do.

Mrs. J. D. Peeler.

Pickled Cauliflower.

To the Editor:—The way I pickle cauliflower is to wash it well and boil in salt water until tender. Then have heated some vinegar with a few spices of all kinds and sugar enough to make a little sweet. Fill the jars with the cauliflower and cover with the vinegar while hot. L. A. S.

Recipes.

Potato With Onion Puree.—Press hot boiled potatoes through a ricer, add salt, pepper, cream, butter and one or two hot, cooked onions pressed through a sieve. Mix all together thoroughly and put in ramekins or a baking dish. Brush over the top of the potato with butter and let bake until browned slightly.

Grapejuice Sponge.—Soften one-fourth package of gelatine in one-fourth cup of cold water and dissolve in a cup of hot grapejuice. Add two-thirds of a cup of sugar, a half cup of cold grapejuice and the juice of half a lemon. Stir over ice water until the mixture begins to thicken. Beat the whites of three eggs until very light, then gradually beat the grapejuice mixture into them. Continue to beat until it is quite firm, then put in a mold a spoonful at a time.

Molasses Hermits.—Beat one-third a cup of butter to a cream; gradually beat in half a cup of sugar, then two-thirds a cup of molasses, strained flour; add one whole egg and the yolk of a second, beaten light, half a cup of mo-

lasses and two cups of sifted flour again sifted with one-fourth a teaspoonful, each, of salt, soda, mace and ground cloves and half a teaspoonful, each, of ginger and cinnamon. Mix to a dough; knead slightly, roll into a sheet, cut into rounds and set a little distance apart in buttered tins; dredge with granulated sugar and bake until well browned below and above.

Prune and Pineapple Jam.—Three pounds of prunes, two cupfuls of canned chopped pineapple, two cupfuls of granulated sugar, one teaspoonful of salt, two cupfuls of water. Soak the prunes in water overnight after washing them. Then bring to a boil quickly and cook until tender. Mash through a colander and add to the water in which they have been cooked. Add the salt sugar and pineapple and simmer slowly for one hour, stirring quite often. Pour into sterilized glasses and cover with paraffin.

Stuffed Steak.—Two pounds round steak, one cup cracker or bread crumbs, one tablespoon salt, one-third cup butter, one-third cup boiling water, one-sixteenth tablespoon sage. Melt butter in boiling water, add seasoning to the crumbs, then add the liquid gradually until crumbs are lightly moistened. Trim and wipe meat. Spread over the stuffing roll, skewer or sow into shape, place in baking pan and baste often with one-fourth cup fat melted in one-half cup boiling water.

Cheese and Rice.—Cover the bottom of a baking dish with a layer of well-cooked rice, add a layer of chopped sweet peppers, another layer of rice and cover the whole with milk or cooked tomatoes. Bake slowly for three-quarters of an hour, then cover with a pound of grated cheese and bake for fifteen minutes longer. Serve hot.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Some Indoor Games.

Dear Young Folks:—I enjoy reading your letters very much. I have written to you before, but I never saw my letter, so I am going to try again. I live on a 200-acre farm. I am thirteen years old and finished common school last year. I have three pet calves and a pet horse.

I am going to tell Blue Eyes how to play some of my favorite indoor games. As many can play this game as want to. Take a bowl of beans and let each player dip his hand in the bowl (with his hand out flat) bringing it out with as many beans as possible on the back. Whoever has the most beans on the back of his hand is given some little prize, not expensive, but something funny to make the game interesting.

Another game is to stretch a sheet over a door and cut a hole in the middle, having half the players on each side. Have those on one side put their hands through the hole, one player at a time, and those on the other side guess whose hand it is. The one who guesses the greatest number correctly gets a prize.

Another game is this. There has to be an even number of players and on each player some letter is pinned. One person asks another some question, the first word of which begins with his letter, and the one who is asked the question must answer with a sentence in which the first word begins with his letter. This game is a great lot of fun. —Another Blue Eyes.

Writes Her Autobiography.

Dear Young Folks:—I am going to write my autobiography and hope it will interest you.

In the year 1907 on the 24th of March I was born. I must have been a good little girl, for that is the way I am now. They had a great time finding a name good enough for me, but after a few days they called me Wenona Gwendolyn Hummer.

When I was three years old my little sister came. She was born on the same date I was. She was named Evelyn Beatrice Hummer. We two always have a big time together on our birthday. Mamma always makes us a big birthday cake and we have a little celebration of our own.

I started to Hazel Glen school when I was six years old. I did not like to go to school very well at first. I guess the reason was that I had to go all alone.

In 1914 we went to a Fourth of July celebration. I was just old enough to know what it meant and I certainly enjoyed myself. I never will forget how the fireworks looked.

On the 7th of May, 1916, I went with my grandpa and grandma to see the Mississippi river. It was shortly after the spring rains and the river was very high. In some places along the river people had to move out of their homes. It was a very long journey and I was very tired when I got home.

I am now in the fourth grade and hope to be promoted this spring. My teacher's name is Margaret Kessler and I like her very much. Wenona.

Seen a Robin Yet?

Dear Young Folks:—I am a girl eight years old. I live on a farm. I have two sisters. We like the farm very much. We have four calves. My sister and I go to school together. We have a mile to walk.

Have any of you seen a robin yet? I have not. I like to hear them sing but I haven't heard any yet this spring.

Say, Annie, I know the answer to your riddle. Milk was highest when the cow jumped over the moon.
—Another Annie.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for April 1, 1917.

Jesus Gives Sight to Blind.

LESSON TEXT—John 9:1-11, 35-38. (Read entire chapter.)

GOLDEN TEXT—I am the light of the world.—John 9:5.

This, another of the signs which Jesus performed, is recorded only by John. It probably occurred in October, six months before the crucifixion, while Jesus was attending the feast of the tabernacles. There are six other cases of blindness recorded as having been cured. Look them up.

I. The Case (vv. 1-4). It was absolutely hopeless. No human skill could touch it, but Jesus "passed by," and that changed everything. What men cannot do Jesus can. Jesus is passing today, and we may expect things quite as wonderful to happen (John 14:12). This blind man illustrates the unsaved sinner (I Cor. 2:14). He never had seen. He was beyond human help (v. 32). He had doubtless given up all hope of seeing. He was without sympathy, suspected and despised (vv. 2, 34). Poor—he was a beggar. He is also a type of the nation of Israel (Rev. 3:17). We must not attempt to explain all sickness (v. 3). God frequently uses it for the advancement of his kingdom (John 11:4). Jesus not only passed by but he "saw." The feeling of the crowd was that of curiosity and contempt. His feeling was that of compassion (vv. 2, 4 and 6). Sickness sometimes manifests God's sustaining grace (II Cor. 12:8-10). It is doubtless true that a large percentage of sickness is the direct result of sin (John 5:14; Mk. 2:5; Acts 12:23), some, of course, indirectly (Job 23:14-30).

II. The Cure (vv. 4-11). The word "must" in verse four is a strong one. The time for us to do our work is "now." This word "must" carries with it the idea of a divine imperative, and the resason for that imperativeness is the approaching "night." Night is coming fast, when no man can work. Notice the works we are to do are not our own, but "the works of him that sent me." Compare carefully verses two and four, and see that Jesus considered delivering the man from evil far more important than speculating about the origin of his complaint. Too much time is spent in investigation. Let us have more of action. The means used in this cure were clay and spittle. The miracle was performed in plain view of all who might see. The man did not ask Jesus to help him, but Jesus had gone where he was (v. 5). His words, "Go wash" were a test of the man's faith (II Kings 5:10-14), and his part in the transaction was a testimony that it was Christ who worked the cure. The use of the material means in this ceremony made the man more willing to go and wash. It gave him something to do, and doing is always an end to faith. Siloam means "sent' and was a type of Jesus himself (v. 4; John 10:36; Rom. 8:3; Gal. 4:4). If we wish to receive sight for our blind eyes, we should go to him and bathe (John 8:12).

III. The Controversy (v.12 to end of chapter). This controversy gave opportunity for testimony, as we have already seen, first of all upon the part of the man whose testimony was progressive. At first he merely spoke of the fact. He was not acquainted with Jesus, for he calls him "The man called Jesus." Later on he is moved to call him a "prophet." He is a prophet (v. 17), and later still he recognizes him as "The Son of God" (vv. 35-38). This controversy established beyond question the fact of the cure. It brought out the deity of Christ (v. 33). The man was excommunicated, but for that matter he was already outside because of his physical infirmity, but, be-+ of all, he became truly Christ's disciple.

IV. Comments. This lesson with its vivid contrasts of belief and unbelief gives us a wonderful opportunity to urge upon pupils a decision to live the Christian life. Has Christ opened the eyes of our scholars to the love of God, to the awfulness of sin, to the need of a Savior, our divine Leader and Brother? Urge them, in the class and out, to be as outspoken and courageous for Christ as was this man who had never before perhaps seen or heard of Jesus, and whose gratitude at once called forth this wonderful confession.

Being cast out by the rules of the synagogue brought this man into closer and deeper fellowship and communion with Jesus.

He had believed far enough to obey his bidding, and had thus been healed. Now he is brought to a great sav-

"FARM-WEAR" SHOES for FARM WEAR

"FARM-WEAR" shoes are made especially for farm service. They wear nearly twice as long as other shoes because the leather is double tanned (black and chocolate) and proof against uric acid, which comes from sweaty feet and barn yard service.

NUNN BUSH MILWAUKEE SHOES

Also, they are well made of solid leather, sightly and feel as nice as they look—6 in., 8 in., 12 in. and 16 in. high.

Tell us the name of your dealer and we will arrange for you to try on a pair of "FARM-WEAR" shoes.

ing, transforming faith, viz., that Jesus is the Son of God.

Do we take advantage of our privilege of confession?

Before Christ came there were no hospitals.

He is the inspiration of all charitable institutions, but healing of the body is of secondary importance; the healing of the soil is primary. "Whereas I was blind, now I see."

Start with what you know—your own experience—and he will reveal himself according to your developing and progressive needs.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wisconsin.

2018—Girls' one-piece dress, with sleeve in either of two lengths. Pattern is cut in 4 sizes: 6, 8, 10 and 12 years. It requires 3¾ yards of 36-inch material for an 8-year size.

2014—Overblouse dress for misses and small women. Pattern is cut in 3 sizes: 16, 18 and 20 years. It requires 2 yards of 36-inch material for the guimpe, and 8⅝ yards for the dress, for a 16-year size.

1628—Ladies corset cover and drawers. The patterns for these two desirable models is cut in 3 sizes: Small, medium and large. It requires 3½ yards for a medium size, in 36-inch material.

1788—A comfortable morning dress. Pattern is cut in 7 sizes: 32, 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 5½ yards of 44 inch material for a 36-inch size.

1864—Girls' dress, with sleeve in either of two lengths. Pattern is cut in 4 sizes: 8, 10, 12 and 14 years. It requires 3½ yards of 44-inch material for a 12-year size.

1795—A practical and easily developed outfit. Pattern includes all three garments. It is cut in 5 sizes: 2, 3, 4, 5 and 6 years. It requires ⅞ yard for the drawers, 1½ yards for the underskirt, and 2⅛ yards for the dress, of 36-inch material for a 4-year size.

Waist 1648-Skirt 1656—A splendid style for business or afternoon wear. Waist 1648 is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 1656 in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It requires 7⅞ yards of 36-inch material for a medium size. Two separate patterns, 10 cents for each pattern.

2030—Boys' blouse suit, with or without shield and yoke facing, and with sleeve in either of two lengths. Pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 2½ yards of 44-inch material for a 3-year size.

2021—Ladies' sport blouse, with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36,, 38, 40, 42 and 44 inches bust measure. It requires 3½ yards of 36-inch material for a 36-inch size.

Blouse and cap 1780-Petticoat 1728—A smart Breakfast costume. Pattern of the blouse which includes the cap, is cut in 3 sizes: Small, medium and large. It requires 3⅜ yards of 36-inch material for the sack and ⅞ yard for the cap, for a medium size. Skirt 1728 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅝ yards of 36-inch material for a 24-inch size. Two separate patterns, 10 cents for each pattern.

2036—Ladies' dress, with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7¼ yards of 36-inch material for a 36-inch size.

1692—Ladies' Shirt waist, with sleeve in either of two lengths. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3½ yards of 27-inch material for a 36-inch size.

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

Ailing Animals.

Chronic Inflammation of the Knee.

I have a five-year-old gelding that is lame in its left front leg. There is a bunch on each side about the size of a man's fist. This is at the knee and just below it. Sometimes this horse is very lame and at other times he is not. I think the membrane over the muscle is broken and it is the muscle that makes the bunch. I would like to know how to cure it.

This is a chronic condition and may not be overcome. However, some good may come from blistering or firing, but this should be done by a man familiar with the work.

Infection Ano-Vulvitis.

I have about twenty-five head of cattle and twelve of them have become sore behind. I thought the hogs had chewed them, but later found that they swelled up on one side and then got sore. The sores smell very badly and the cattle do not do any good. Can you tell me what is the cause of this and what I can do for it?

This is an infectious trouble and is seen in both sexes at times. The best results in these cases have come from cleansing the parts and curetting away all necrotic or dead tissue and then applying tincture of iodine to the parts. This work should be done by a veterinarian. The stables should also be cleaned and disinfected.

Abortion in Cows.

I have a herd of eleven cows. Six of them lost their calves last year. I sold the bull and bought a young bull to breed the cows to. Some of the cows should calve in March. Would it be advisable to sell the cows and bull for beef and buy others?

You might sell these cows for beef and then thoroughly disinfect the premises before introducing new stock onto the place, or if your cows are valuable you might keep them, as the disease runs its course in about three years, and you could then raise calves from these cows. Of course,

Cow Lice.

This winter my cattle have lice or something that is dark in color like a bedbug and about one-tenth the size of a bedbug. Some people say they are crabs. They are full of blood and anything the cattle rub themselves on is smeared with blood on account of smashing these crabs. I have tried several remedies, but they have failed. The cattle are in good condition.

Your cattle are infested with the large cow louse. The application of some good louse powder is the best treatment during cold weather, but in warm weather scrubbing with a 2 or 3 per cent creolin solution may get rid of the lice. Even a kerosene-soapsuds mixture is good and inexpensive to use in warm weather.

Mange.

My horses are bothered with a skin disease. They have had it about a month. Their skin looks scurfy and there is not a bit of dust in it. I have some medicine I got from a veterinarian and am feeding them stock food and have sprayed them, but it does not seem to do any good.

This may be some form of mange. If there are any scabs they should be removed by use of soapsuds and, if necessary, followed with a thorough application of one and one-half ounces of tobacco and water, two pints, prepared by boiling. This may be applied more than once and should always be repeated after fifteen days. All harness and stable utensils should be thoroughly disinfected and the walls sprayed with whitewash. In applying the treatment be careful not to cause the animals to contract a cold.

More Work From Your Horse

YOU can't expect good work from your horse when his shoulders and neck are hurting under an ill fitting collar.

Scotch Knocker Horse Collars, by their perfect fit, *prevent*—even *cure*—Galled Necks, Sore Shoulders. They are built to conform to every bone, every muscle—to work *with* your horse and assist.

Made of *real* seven-ounce *bark*-tanned leather. Stuffed with hand-flailed, long rye straw. Faced with soft sweat-and-rain-proof buckwheat hulls. Triple reinforced at throat Write for *free* book.

Minnesota Harness Factory, Inc.
105 2nd St. West, Winona, Minn.

Scotch Knocker Leather Collar

Half a Cow—

Half a cow means half a profit—really a loss, because a poor producer costs as much to keep as a good milker. If you have a cow that is below par, chances are some vital organ is impaired and she needs treatment.

Kow-Kure is the one cow medicine that quickly tones up the digestive and genital organs and puts a backward cow on her feet. Try Kow-Kure on your most doubtful cow. It is especially effective for the prevention or cure of Abortion, Barrenness, Retained Afterbirth, Milk Fever, Lost Appetite, Scouring, Bunches, etc.

Sold by feed dealers and druggists, in 50c and $1.00 packages. Write for free book, "The Home Cow Doctor."

DAIRY ASSOCIATION CO., Lyndonville, Vt.

Funds Available for Roads.

(Continued from page 7.)

thirty counties operating under what is known as the county unit plan.

The present state aid law was enacted by the legislature in 1911 and the highway commission was appointed and commenced work in August, 1911. In five years, including the work of 1916, there has been built under the direction of the state highway commission 2,559.32 miles of hard-surfaced roads, 212.6 miles of temporarily surfaced roads and 2,358.86 miles of graded and drained roads. This makes a total of 4,846.19 miles. Under the same supervision there have been 2,819 state aid and county aid bridges. The 4,846.19 miles of road under the three classes as stated have cost the state $14,631,824.81. The average cost of state-aid road construction during the five-year period has been $3,019 per mile. This includes the cost of construction in Milwaukee county. There were 4,713.48 miles constructed outside of Milwaukee county at an expense of $12,252,888.37, making an average cost of road construction per mile, outside of Milwaukee county, $2,599. The cost of state supervision of this work, including also the cost of supervision on bridges and county and town road and bridge work, was 2.03 per cent, or a total of $371,189.49. This cost not only included that of supervision of work, but also of preparation of plans for road and bridge construction up to September 1, 1915.

We are told by the members of the highway commission that it is rather difficult to arrive at the average cost of various kinds of road construction in Wisconsin. However, the following statements give something of an idea on this subject:

	Per mile
Grading, draining, and culverts only	$ 1,300
Waterbound macadam road, 9 feet wide	4,200
Waterbound macadam road, 16 feet wide	6,700
Crushed gravel macadam, 9 feet wide	3,300
Crushed gravel macadam, 16 feet wide	5,000
*Concrete road, 9 feet wide	8,000
*Concrete road, 16 feet wide	13,000
*Concrete road, 18 feet wide	14,500
*Brick road, 9 feet wide	11,500
*Brick road, 16 feet wide	19,000
Brick road, 18 feet wide	21,000

*Four-foot shoulders on each side add about $1,000 per mile if of gravel; about $1,500 per mile if of crushed stone.

We have said that out of 76,000 miles of road about 20,000 miles are included on the system of prospective state highways in all of the counties. The highway commission, however, makes this statement: "Of this system probably 15,000 are of sufficient importance to justify state and county aid in their improvement." Of course, there are a great many farmers interested in the 61,000 miles of road not included in the proposed system of state highways, these roads now being maintained by the towns. The commission in its annual report estimates that these roads may be put in condition so that they can be maintained at a reasonable cost. To do this it is estimated that an expenditure of $150 per mile for grading is necessary and this would mean $24,400,000 needed for reconstructing town roads. The commissioners also estimate that these roads could be maintained after they were put in good condition by dragging and road machinery work at the proper times at an annual cost of $40 per mile, or $2,440,000. As an argument in favor of permanent roads as rapidly as they can be built, the commissioners say that about $80,000,000 will be expended in the next eight or ten years, and in this same time 61,000 miles of our town roads will be very little impended in the next eight or ten years,

SANITATION

IS THE RELIABLE METHOD FOR PREVENTING

FOOT AND MOUTH DISEASE

HOG CHOLERA

AND OTHER CONTAGIOUS DISEASES.

You can make all live-stock quarters sanitary by using

KRESO DIP No. 1

The Standardized, Reliable Dip and Disinfectant.

OUR LEGAL DEPARTMENT

THIS department is edited by a practicing lawyer who has had years of experience at the bar. He will give accurate and reliable answers to all legal questions when they are of sufficient importance to be of practical interest to any considerable number of our readers. Subscribers who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delayingprinted answers, those to whom it is important to receive an immediate reply by mail should remit $1.00, addressed as above.

Law Questions.

Carrying Revolver.

A Subscriber, Spring Green, Wis.—Is it lawful in Wisconsin, for a person to carry a revolver to defend himself or herself against dogs and other animals, and if not what is the penalty?

Answer.—It is not lawful. The panalty for a violation of the law is imprisonment in jail not more than six months or a fine not exceeding $100.

Naturalization.

A Subscriber, Hartford, Wis.—Parents with their children came from a foreign country to the United States. The father took out his first naturalization papers, but never got his final papers. When the children become of age, after being in the United States more than five years, they took out their first naturalization papers. When can they get their final papers and be admitted as citizens of the United States?

Answer.—At any time after two years from the date of their first papers and not later than seven years after date of first papers.

Contract Must be Written.

Mr. Victor Trawicke, Dolonia, Wis.—Two years ago I asked my neighbor who owns adjoining land to sell me an eighth of an acre, so I could dig a ditch on it to drain my farm. He said he would do so later, but that I could go ahead and dig the ditch, which I did. Now he allows his cattle to run over the ditch and they do it great damage, and he refuses to sell me the piece of ground. How can I compel him to sell it to me?

Answer.—You cannot compel your neighbor to sell you the land. An agreement to sell land must be in writing, otherwise it cannot be enforced by law.

Strawberry Plants—Damages.

A Subscriber, Seymour, Wis.—Last spring A bought expensive strawberry plants from a nursery company, and the company guaranteed the plants to grow, and agreed to replace the same if they did not grow. Only about half of the plants grew. A wrote to the company to replace what failed to grow, but received no answer. Can A compel the company by law to replace the plants?

Answer.—He cannot, but if the company does not replace the plants A can sue it for damages and recover a judgment for the same. It is most likely, however, that the expense of a lawsuit would be more than the plants are worth.

Inheritance in Wisconsin.

A Subscriber, South Milwaukee, Wis.—My father made a will several years ago, providing that all his heirs should share and share alike in the property he should own at the time of his death. He has since died. My brother died leaving no heirs. There were some debts against my father's estate and my brother's wife signed a deed in order that we might get rid of said debts. Is she now entitled to a share in my father's estate the same as any other heir?

Answer.—If your brother died before your father's death your brother's widow would not get any of your father's property, but if your brother died after your father's death your brother's widow would get her husband's share of the property.

Cropper's Rights.

I. E. B., Sioux Falls, S. D.—A rented a quarter section of unfenced land to B for three years, B to fence said land with materials furnished by A, which was done. B pastured the land the first year. At the beginning of the second year, C rented from B some hay land in said quarter section, and paid B the rent agreed on. B cut his hay and put it in five stacks on the land—single stacks, not in a group. There are no cross fences on the quarter section. B told C that he expected to pasture the land this winter, and that said stacks would need to be fenced, as B would turn in stock as soon as corn was out. B waited two weeks after corn was out, and then turned in his stock to pasture. Then C demanded that B should fence said stacks. Can C compel B to fence the stacks?

Answer.—C cannot compel B, by law, to fence the stacks. If C rented the hay land for the hay crop of that one season only, it was C's business to take his hay off the place when the hay was harvested. In such a case C was a mere cropper.

Estray Cattle—Damages.

A Wisconsin Subscriber.—When cattle are running at large, and do damage to my premises can I shut them up and hold them till the amount of damages is paid, and what steps must I take to get damages in such a case, and also pay for keeping the cattle?

Answer.—If you find the cattle on your premises, you can shut them up, and you must then notify the owner of them of your charges for the damage they have done, and ask him to pay the same, and take them away. If he fails to do so, you must have them appraised by a justice of the peace. Within one year thereafter the owner of the cattle may take them by paying your claim for damages and care of the cattle, and if you and he cannot agree upon the amount, you must apply to a justice of the peace to settle the same, and he will hear witnesses on the matter, and fix the amount to be paid. At the end of a year, if owner don't pay, the cattle can be sold by the sheriff or a constable at public auction, and your claim paid, together with one-half of the balance of what they bring, the other half being paid to the town treasurer.

Compensation Means Payment for Actual Loss Only

IN any consideration of the principle of Compensation as applied to the Brewing Industry or any of its allied branches, do not allow your view to fall into the perspective of total loss. Under the system of compensation, the state would not pay a total loss unless a total loss is sustained.

The physical valuation is only an offset against the actual loss. Whatever value remains in the re-adjustment to some other pursuit is not compensated.

Payment is made only for the actual loss sustained. And this applies to other branches of the business, the distiller, wholesaler, retailer, as well as the brewer.

And in addition to this, the public should not let its mind rest on the three or four large breweries when considering the Compensation issue. Rather survey the hundred and more small establishments throughout the state.

Here and there, if you will travel over Wisconsin, you will find the little country brewery. Its owners are leaders in the community—leaders in everything of a civic, educational, charitable or social nature.

The owners may be father and son, the young man following the sire in the traditional business of the family. The days of toil of possibly three generations, the entire savings of them all, in fact, the family's "all" rests in this little brewery.

To wipe out their entire business and support certainly cannot be done honorably, even by the state, without Compensation to those who sustain the loss. They have been permitted and encouraged to put the labor and effort of a lifetime into the business and surely are entitled to a square deal.

A survey of other branches of the industry from the manufacturer down to the retail dispenser, will reveal many like cases.

It would be both unfair and unjust to deny hundreds of these families Compensation.

The Brewers of Wisconsin

Cow-Testing Reports.

Waupaca and Butternut Ridge.

To the Editor:—Seventy-one cows out of 350 tested in the Waupaca and Butternut Ridge Cow-Testing Association, during the month ending February 20th, produced forty pounds of butter fat or over. The blue ribbon cow, a grade Guernsey owned by Herman Becker, produced 1,038 pounds of 6.2 per cent milk, making 64.4 pounds of butter fat. The Ira Farley herd of eleven Holsteins produced an average of 1,254 pounds of milk, netting 46.9 pounds of butter fat. Following is the forty-five-pound list for the month ending February 20th:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Work Out Economical Ration.

To the Editor:—In February we had fifty-two cows which made the forty-pound list and twenty-seven which made forty-five pounds of butter fat or over. The best cow for the month was a registered Holstein owned by Torris Geraldson, of Manitowoc. She produced in twenty-seven days 1,714.3 pounds of milk testing 4.0 and making 68.6 pounds of fat. Owing to the extreme high cost of feeds this winter many cows have bene kept from doing their best. With oats, barley, gluten, wheat bran and oil meal so high in price many of our members have been selling their barley and buying barley sprouts and corn. Barley sprouts are selling here at $24 a ton and wheat bran at $39 per ton. By making a mixture of ground oats, ground corn, wheat bran oil meal and barley sprouts we have been able to get a good ration at a greatly reduced cost, and have also had fairly good results. We are reorganizing two associations here in the place of the Manitowoc County Association No. 1. Our forty-five-pound list for February follows:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Adolph Otto					
Jewel, R. H..	5	1-31-17	1464.0	3.6	52.7
Lady 3, R.H.	2	10-20-16	1596.0	3.0	47.9
Torris Geraldson					
Martha, R.H.	4	1-30-17	1714.3	4.0	68.6
Pauline, R.H.	4	1-16-17	1476.0	4.0	59.0
Canary, R.H.	4	2-6-17	1276.8	5.3	67.7
Labriga, R.H.	3	1-31-17	1281.0	4.3	55.1
Pinery, R. H	2	1-24-17	1248.0	3.7	46.2
Walter Behm					
Flora, G. G..	7	12-22-16	1046.5	5.0	52.3
Bossy, G. G.	7	12-3-16	1054.5	4.4	46.4

Where Watchful Waiting Failed.

To the Editor:—Those dairymen who watched and waited last year, while the wise ones were laying in their winter's supply of feed, at summer prices, are now returning a large slice of their milk checks to their feed dealer each month, while the wise ones, with the help of the advance in the price of their products are receiving big returns for their wisdom.

Considering the low quality of roughage harvested last year, and the high price of concentrates this winter, some exceptionally good records were made during the past month. Our leading herd, with an average production of 49.6 pounds butter fat is a convincing example of what good feeding and careful attention will do towards building the bank account. With an average feed cost of $11 per head, this herd returned a net profit of over $16 per cow.

The following table gives the names and records of the cows in the association which have produced more than fifty pounds of butter fat during the thirty-day period ending March 15, 1917:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
Fred Lick					
No. 3, P. B. H.	4	1-17-17	2065	3.8	78.5

Ketterer's Jersey Sale.

R. G. Ketterer's dispersal sale of Jersey cattle held at Werley, Wis., on Wednesday, March 7th, attracted a fair crowd in spite of the extremely bad weather, and fair prices were obtained. Colonel Heberlein was auctioneer and J. R. Villemonte clerk. Following is a complete list of the buyers and the prices paid:

1.	Herd bull, Chas. Smethurst, Eastman	$105.00
2.	Yearling bull, H. C. Vesperman	62.00
3.	Cow, Theo. Wehrle	180.00
4.	Cow, Chas. Maughn	77.50
5.	Cow, Chas. Maughn	110.00
6.	Cow, Chas. Maughn	107.50
7.	Cow, W. C. Edge	100.00
8.	Cow, Chas. Maughn	110.00
9.	Yearling coming 2, I. A. Vesperman	70.00
10.	Yearling, Chas. Maughn	62.50
11.	Jas. Huff	79.00
12.	Yearling, Chas Maughn	57.50
13.	Yearling I. A. Vesperman	70.00
14.	Yearling, Jas. Huff	73.00
15.	Yearling, Chas. Maughn	57.50
16.	Calf coming 1 year old, Will Noone	36.00
17.	Calf, Will Noone	36.00
18.	Calf, Theo. Wehrle	40.00
20.	Calf, R. Mathews, Platteville	31.00
21.	Calf, Will Noone	36.00
22.	Calf, Theo. Wehrle	40.00
23.	Calf, Will Noone	36.00
24.	Will Noone	62.50
25.	Calf, 4 months old, Milo Hill, Tomah	45.00
26.	Cow, Jas. Huff	122.00
27.	Grade cow, John Deisler	110.00
28.	Grade cow, W. C. Edge	110.00
29.	Grade cow, Jas. Huff	117.50

Stephenson Dispersion Sale.

THE fact that this herd represents the labor and intelligence throughout a long period of time, of Mr. James Torrey, manager, one of the ablest Holstein breeders of the state of Wisconsin, that there are included in the offering 11 800-pound cows, that Admiral Walker Prilly has 65 daughters in the sale, that King Walker Pietertje Segis, the junior herd sire, whose 13 nearest dams average 30.07 pounds, is bred to over half the cows to be sold, and that the herd is known to be free from tuberculosis should attract every Holstein enthusiast from a wide radius of country to Lake Mills, April 6th and 7th, where the grand herd is to be dispersed. One hundred and seventy-five head, representing so much of King Segis blood as well as other popular families of the breed, and so much semiofficial yearly and short-period tests presents an opportunity to Holstein buyers wishing foundation stock, that in all probability has never been equaled before in the central West. There are three bulls out of 800-pound cows, one out of a 720-pound junior three year old, two from 26-pound dams, one from a 27½-pound dam and three out of 20-pound junior two year olds. Among the heifers there are four from 20-pound junior two year olds and 21 daughters and 10 granddaughters of semiofficial yearly record cows. See advertisement on page 24.—Adv.

Making Success With Sheep.

(Continued from page 6.)

structed that they have an opening towards the south and plenty of bedding available for the sheep. His success can, in a small way, be duplicated on most of Wisconsin's farms where sheep are not now being raised.

Mr. Renk is active in many organizations in his county and in the state. He is vice president of the Hampshire Breeders' Association of America, secretary of the Wisconsin Sheep Breeders' Association, an officer in the South Bristol Community Club, and vice president of the Farmers' and Merchants' Bank, of Sun Prairie. As Mr. Renk is also interested in tobacco growing, he decided long ago that the tobacco growers of his district need not be at the mercy of the buyers. He was, therefore, instrumental in organizing the Atlas Tobacco Company, of which he is president. The men belonging to this organization are mostly farmers like himself. Each year previous to the organizing of this company the buyers had the farmers somewhat at their mercy when the harvest was in. In order to assure better prices and fair treatment especially regarding dockage the organization has bought a warehouse or storehouse. Here they store their crops when prices are low until such time when better markets are open to them. The investment for each member was a small one. During the time that this storehouse is not in use it is rented at a fair figure to local tobacco dealers who are anxious to get the space.

Keep a lump of kitchen salt in the sink. It will dissolve slowly and keep the pipe clean and the sink fresh and wholesome.

E-B Farm Tractor

Model L—12-20 Horse Power

A four-cylinder, 2-speed, light-weight tractor of great power, suitable for any size farm. Will pull the implements you now have on your farm—gang plows, harrows, mowers, binders, manure spreaders, road drags or graders. Will also operate your ensilage cutter, feed grinder, circular saw, etc. Does more work than horses—costs less and is so simple anyone can run it.

Live Stock and Commercial Notes.

Gathered by Representatives of The Wisconsin Farmer.

Pleasant View Herd of Brown Swiss Cattle.

WHILE visiting the Pleasant View herd, Honey Creek, Wis., a few days ago the attention of a Wisconsin Farmer representative was called to the splendid official records that were finished the first of January. This noted show herd is one that is known throughout the United States for the constructive breeding which it represents. Mr. Ayers has attained the distinction of breeding animals that represent the highest type the breed has yet produced. The calves and young stock were in thrifty condition and special mention should be made of four two-year-old heifers that were as near alike in type as two peas. We have never had an opportunity of seeing four animals of this age in one herd before that so nearly represented the ideal conformation. The following is a list of the records already referred to: Flora Duwire (4105) 16,538.1 pounds milk, 649.42 pounds fat, 3.9 per cent average test. Azure (3760), 14,236.6 pounds milk, 531.94 pounds fat, 3.76 per cent average test. Molly P. (2856), 15 years of age, 10 months in calf and soon due to freshen, 13,564.4 pounds milk, 512.79 pounds fat, 3.83 per cent average test. Miss Cuma (3011), 11,962.2 pounds milk, 545.2 pounds fat, 4.62 per cent average test. Spright (5508), 10,552.8 pounds milk, 693.29 pounds fat, 3.93 per cent average test.—Adv.

High-Grade Dairy Cows.

PERHAPS one of the greatest opportunities to purchase high-grade dairy cattle that has been offered the public for some time comes with the announcement that the Edgewood Farms, Pewaukee, Wis., have discontinued the production of certified milk and are going to devote all their energies toward the development of a herd of high-class registered Holsteins. Their grade herd numbers 134 head consisting of Holsteins, Guernseys and others. This herd has been under federal inspection for a number of years and is free from all disease and in the best possible condition. These cattle are in different stages of lactation and can be seen in their every day working condition. This herd has been carefully selected and handled under the most approved sanitary conditions. There are no old, worn-out cows in the herd, it is a herd of workers and from their records it would seem that some of them were working overtime. Anyone in the market for such cattle should lose no time in getting in touch with Edgewood Farms, at Pewaukee, Wis. See their advertisement on page 27.—Adv.

Here is a Bargain.

SOMEONE wanting a Holstein cow that is a producer in every sense of the word should be interested in the following. The Silver Spring Farm Co., Eau Claire, Wis., has been advertising heifer calves for sale, but their surplus is now sold and they are offering for sale, one of their good cows, namely, Ruby Withoorn De Kol 110262, born December 29, 1907. She has produced a calf every year since she was two years old and has given from 8,000 to 10,000 pounds of milk (by weight) yearly. She was bred December 24, 1916, to their herd sire, Sir Bess Ormsby Mercedes 184275, whose dam and sire's dam records for 365 days average 20,574 pounds milk, 958.3 pounds butter. This cow is guaranteed safe in calf and sound and the price is only $150. Such a cow is cheap at that figure and you can feel safe in sending your check for her with shipping directions. Kindly mention The Wisconsin Farmer.—Adv.

Fifty Registered Short-horn Herds.

WHEN buying Short-horns or any other breed of cattle, there is an advantage in buying where you have the greatest selection. We feel safe in saying that there are more herds of registered Short-horns in Rock county, than in any other county in the state of Wisconsin, and if you want bulls or females, this county Short-horn association can fit you out. The best herds of milking Short-horns in the Northwest are in Rock county, a herd of Scotch Short-horns second to none in the state is in Rock county and there are many herds of Scotch-topped cattle, so prospective buyers need have no fear but what they can find cattle to their liking in the above county. For further information, write J. E. Kennedy, secretary, Janesville, Wis.—Adv.

Gustav Pabst Purchased Two Noted Sires For Pure-Bred Holstein and Guernsey Herds.

FRED SOUTHCOTT, manager, reports that they have purchased a King Korndyke Sadie Vale bull out of Ruth Pontiac Veeman Korndyke, a 29.42-pound daughter of Sir Korndyke Pontiac Artis, and a May Rose bull sired by Longwater Hambro and out of a 711.7-pound dam with a sister having 717 pounds fat. Sons of King Korndyke Sadie Vale are indeed rarely offered for sale and it is a decided advantage for the Holstein interests of Wisconsin to have this animal in the state.—Adv.

Offer on Incubator and Brooder.

GET your new incubator for the spring hatch. The time is at hand. The incubator is 130-egg capacity and the brooder will hold 130 chicks. They are both made of the finest, select California redwood and finished in natural color. The price includes thermometers, egg tester, lamps and everything complete ready set up. Read the advertisement on page 15 and order direct from the Wisconsin Incubator Company, Box 100, Racine, Wis. Their beautiful incubator and brooder catalog will be sent to anyone on request.—Adv.

Canada's Bonus to Farm Laborers.

CANADA today, with the great demand that is made upon it for foodstuffs, finds itself almost in the throes of a labor famine. A novel means of solving the problem has been evolved by the Canadian government at Ottawa on February 28th, when it was decided to practically bonus every farm hand going to Canada, by giving him an 160 acres free as a homestead. Western Canada has been a big producer of grain and it is estimated that there is a shortage of over 30,000 men, necessary to produce an average crop in 1917. This shortage has been caused by so many young men having left the farms to go to war and it is essential to make an unprecedented offer of this kind to fill their places on the land at once. As explained by an official of the Canadian government, Canada's need for farm laborers is intense and exceptional inducements are being offered to get the needed farm workers at once. A farm hand will make his entry for one of the 160-acre farms and satisfy the government that he is working for a farmer, and the time thus employed will apply as residence on the land filed for, just the same as if he was actually living on it.—Adv.

Well-Made Horse Collars.

TAPATCO horse collar pads are made with a patented staple and felt reënforcing device which gives a large, firm hold on the collar, so that the hooks practically never pull off. A great deal of the collar trouble, such as sore necks and blisters, may be avoided by proper knowledge and care and a good collar. Facts on this subject are clearly set forth in the Tapatco booklet, which includes colored plates of Tapatco collars and valuable information on horse remedies. Ask your dealer for this book or write direct to The American Pad & Textile Co., Greenfield, Ohio, makers of Tapatco collars.—Adv.

The Long-Lived, Taber-Lined Silo.

THE Taber lined silo is a non-shrinkable, long-lived, wood stave silo of choice lumber and careful finish. It is creosoted throughout, and the outside is painted with a special protective paint for protection from the weather. The inside is coated with an acid-proof lining after the silo has been erected. An elegant door and door frame and a special galvanized steel octagon roof are parts of the equipment. If you want a silo, don't fail to get a catalog of the Taber Lumber Co., Keokuk, Iowa, manufacturers of the Taber silo. Send for it now, while you are thinking of it.—Adv.

Morley's Short-horn Bulls.

THE R. A. Morley Company, Baraboo, Wis., is offering for sale a splendid lot of red, white and roan Short-horn bulls. Their herd was established in 1878, and has made many excellent showings both for beef and milk. The present herd bull is Golden Light 300410, a fine animal with an extra good record. Among the bulls offered for sale are two splendid young ones old enough for service, and many younger ones of great promise. Prices are reasonable. See their advertisement on page 26 and write them for further particulars.—Adv.

Ditching and Grading Made Easey.

THE Martin farm ditcher and grader will dig ditches to a depth of four feet, make terraces, build dykes and levees and grade roads at a small cost and a great saving of labor. The Martin is all steel, and is reversible and adjustable to all conditions. If you have any of this work to do, send at once for the free book and special poposition of the Owensboro Ditcher and Grader Co., Box 613, Owensboro, Ky.—Adv.

Strawberry Plants.

NO fruit is more delicious or more appreciated than the luscious strawberry. The Everbearing, in particular, is especially popular with farm folks and the folks who have a town lot big enough for a garden patch. J. L. Todd & Co., R. F. D. No. 3, Des Moines, Iowa, are offering 200 of these splendid strawberry plants, postpaid at a rate that should tempt every reader of this paper. Send them your order. Tell them you saw the advertisement in this paper.—Adv.

Cushion Shoes For the Farmer.

THE popularity of Mayer Honorbilt cushion shoes is due to the comfort and satisfaction which they bring to the wearer. On page 18 will be found a picture of a Mayer shoe showing some of the details of its construction. These shoes are worthy of investigation by every farmer. Write to the F. Mayer Boot & Shoe Co., Milwaukee, Wis., asking about these shoes and the name of nearest dealer. Then be sure and see the dealer when you are ready to make your next purchase.—Adv.

The New 1917 DeLaval.

THE new 1917 De Laval cream separator surpasses all former models. Recent improvements and new features have been added, so that it skims cleaner and under more difficult conditions than ever before. Better lubrication, surer speed control and more sanitary bowl construction result from the improvements. The capacities of De Laval machines are now much greater per dollar of cost than formerly as a result of greater economy in construction and larger volume of sales. If interested in securing a new cream separator, you should ask the nearest De Laval agent to demonstrate the 1917 machine for you. You will be glad to know about it, and if you don't know the dealer, write direct to the De Laval Separator Co., 29 E. Madison St., Chicago, Ill., and ask for full information about their separators See the dealer or write at once, because the demand for the De Laval at this season is very heavy. See advertisement on page 17.—Adv.

Protect Your Valuable Papers and Books.

A MOMENT'S reflection will convince practically every farmer of the great value of a safe place in which to keep his notes, receipts, mortgages, deeds and valuable books. A good, fire-proof, thief-proof safe conveniently at hand is just the thing for this purpose. At sometime or other they may protect the work of a lifetime, and their price is nominal. Victor fireproof safes are made in different sizes, running from $30 to $90 in price. It will pay every farmer to send today for the circular which describes and prices the different Victor safes. See page 6 and write to John Meunier Co., Dept. A, Milwaukee, Wis.—Adv.

New Methods Reduce Cost of Land Clearing.

RECENT land clearing tests made by the University of Wisconsin have shown that certain methods may be employed which will greatly reduce the cost of preparing land for the plow. Both hand and power stump pullers were used in the test and also DuPont Red Cross Farm Powder. It was found that the powder did excellent work in blasting out stumps and that one of the cheapest ways to clear land is to use this powder in connection with a good stump puller. Another feature brought out was that properly placed charges fired with a blasting machine reduce the amount and cost of the dynamite required. Every farmer who has stump land that he wants to make productive should write at once for the Land Clearing Bulletin No. 35, issued by the E. I. du Pont de Nemours & Co., Wilmington, Del. This bulletin is an excellent treatise on the subject. See advertisement on page 12.—Adv.

Valuable Book For Progressive Farmers.

THE new 74-page book, "Better Farming," issued by the Atlas Powder Company, Wilmington, Del., should be in the hands of every farmer who is interested in producing larger and better crops at less cost. It tells of methods of loosening the soil, making it more friable and mellow; it tells how to plant trees at small cost; it shows how stumps and boulders may be blasted out and the land prepared for profitable cultivation; and it takes up other subjects such as ditching, subsoiling, etc. Write and get your copy today. Send a postal card or fill in the coupon in the advertisement on page 13 and mail at once to the company named above.—Adv.

The book contains a coupon which is good for any two sets of plans, if presented to your local lumber dealer. When writing to the company give your lumber dealer's name and they will furnish you with valuable information with regard to your building work. Don't delay, but write at once. See page 20.—Adv.

Holsteins at Tomah Indian School.

THE United States Indian service at the Tomah, Wis., school is doing some interesting work with Holstein cattle. They purchased in 1902 ten registered Holstein heifers, all with calf, and they were very careful in the selection of their sires to head the herd. Their first sire was Johanna Rue Sarcastic Lad 34990 by Sarcastic Lad 23971 and out of Johanna Rue 42167. The next sire was Hengerveld De Kol 3d 61931 by Judge Hengerveld De Kol 43964 and out of Baryl Wayne Sadie Vale 95833. This bull was a grandson of Hengerveld De Kol and is a half-sister to Duchess Hengerveld Korndyke, that made a record of 1,129.22 pounds of butter at three and one-half years. The present sire is Sir Ormsby Johanna De Kol 37689 and he is strong in the Ormsby breeding. They have as yet done no A. R. O. work, but have always kept close record of their milk and butter production and have disposed of all the old cows and those that were small producers, with the result that they now have a splendid young herd of good producing cows. They are getting some of their heifers ready for test. The entire herd at the present time consists of about 70 head. They have a large stable 108 feet long and 52 feet wide, a modern barn with cement floors, steel stanchions, calf pens and box stalls. They have in this barn three rows of stanchions which will hold 81 cows, besides six box stalls and a calf pen. The dairyman in charge has regularly detailed to him about eight boys for the care of the herd. The gutter is connected with a sewer system which enters into a cistern about 100 feet from the barn and which is alongside an enclosed manure pit. The liquid manure is used in the fields in liquid form or is pumped from the cistern into the manure pit onto the litter that is taken from the barns. All the produce is consumed by the Government Boarding School, and they make both butter and cheese. The station has over 40 acres in alfalfa for haying. Mr. L. M. Compton, superintendent, called at the Pabst Stock Farm, Oconomowoc, the other day and selected for the next herd sire, Pabst Johanna Pontiac, by King Pontiac Champion and out of Duchess Johanna of Delafield with a record of 27.3 lbs. of butter and 606.9 lbs. of milk. She also has a yearly record of 829 lbs. of butter and over 18,000 lbs. of milk. The second dam has a yearly record of 889 lbs. of butter and over 20,000 lbs. of milk. Mr. Compton was very careful in his selection and secured a young animal about three-quarters white, nicely marked, and a splendid individual.—Adv.

Making Milking Easy.

THE number of dairymen who have their milking done by hand is becoming smaller each year. Tried and proven milking machines, such as Mehring's milker, manufactured by W. M. Mehring, Keymar, Maryland, now do the work. Mehring milkers will milk two cows at once, twenty cows per hour, which means a great time and labor saver to the dairyman. They are simple to operate and inexpensive to buy. Read the illustrated advertisement on page 16 and write Mr. Mehring for further particulars about his milker. Tell him you saw the advertisement in The Wisconsin Farmer.—Adv.

Farmers Need Good Shoes.

THE comfort and satisfaction of substantial, well-fitting footwear is hard to over-estimate. Farm folks, especially, who are on their feet a great deal, should have the best shoes obtainable for their money. Investigate the high quality of Foot-Schulze Shoes. Write at once to Foot-Schulze & Company, St. Paul, Minn., for the name of nearest dealer and then see him when you buy your next shoes. Read the advertisement on page 19 and attend to the matter of writing today. Kindly mention The Wisconsin Farmer in your letter.—Adv.

Kerosene Engine Booklet Free.

A VALUABLE booklet on kerosene engines may be obtained by writing to the Worthington Pump & Machinery Corporation, 176 Holthoff Place, Cudahy, Wis. Practically all farm sizes of engines are explained and their mechanism described. The farmer who is wanting practical advice on the purchase of an engine for his farm work, as for instance, running a feed grinder, corn sheller, electric lighting plant or cream separator, should send for this booklet. It is free. Mention The Wisconsin Farmer. See advertisement on page 10 and write today.—Adv.

MUCKLESTON BROTHERS, Waukesha, Wis., have broken the state milk record for seven days with Cornucopia Johanna Clothilde (105862). Her seven, fourteen and thirty-day records are as follows: Seven days, 747.2 pounds milk, 27.28 pounds butter; 14 days, 1,450.8 pounds milg and 52.37 pounds butter; 30 days, 2,910.5 pounds milk and 105 pounds butter. Her sire, Aaggie Cornucopia Johanna Lad (32554) has four daughters that produced over 700 pounds in seven days and has 102 A. R. O. daughters according to the last blue book. Muckleston Bros. have completed six other very creditable A. R. O. records this year and will soon start five more on test. Their junior herd sire is Pabst Blackberry Korndyke, a $1,625, 31-pound son of Korndyke Segis Johanna.—Adv.

SHORT-HORN CATTLE.

$50,000 IN SHORT-HORN PRIZES

This Association has appropriated for 1917 approximately $50,000 for prizes at state fairs, interstate fairs, live stock shows, state and interstate association shows and sales from New England to the Pacific coast and from Canada to the Gulf.

Pick your show things now and begin preparation for these contests, that you may claim a share of the prize money.

1916 was the biggest Short-horn year in the history of the breed and 1917 bids fair to far exceed it.

NORTON FARMS R. R. 11 FRANKSVILLE, WIS.

HEAD YOUR HERD WITH A W INNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. WAUKESHA, WISCONSIN

A NICE lot of young bulls closely approaching serviceable age. Can spare a few females. Sires, University Johanna Excell and King DeKol Lyons. (Registered Poland China hogs).

Marinette County Asylum - Peshtigo, Wis.

HIGH GRADE HOLSTEIN HEIFER CALVES

31-32 pure, $18 crated. W. Watt, Grimms, Wis

HIGH grade Guernsey and Holstein calves, 2 to 3 weeks old, $20. Crated to ship anywhere. 31.32 pure. Chas. Blott, Mukwonago, Wis.

SHEEP.

VALLEY VIEW STOCK FARM

SPECIAL OFFERING

ON account of recent changes in our farm management I have decided to offer for sale 50 head of high-class, pure-bred ewes not heretofore offered, in the following breeds: Delaine, Cheviot, Southdown, Rambouillet and Oxford. These sheep are all bred to high-class imported and prize-winning rams. I am also offering 25 head of pure-bred Angora does bred to winner at the Panama Exposition.

Geo. A. Philippi, R. 40, Bear Creek, Wis.

MULE-FOOT SWINE.

IMMUNE Mule-Foot hogs, all ages. Sired by and bred to champion boars. Reg. Hereford cattle. Chas. D. Thompson, Letts, Ind.

Why I know SEPARATORS

Because my first job on the farm was to teach the new-born calves to drink skim milk out of a pail by putting my fingers into the milk and then into the calf's mouth, and in this way coaxing them to drink out of the pail. My next job was to milk cows. I teased my father to learn to milk, and after I learned he would not let me stop. Then later on the cream separator came out and my next job was to turn the crank—some hard job in the early days. Then I started in to work for an implement dealer who sold separators. I became better acquainted with separators, because I had to study every separator made in order to meet competition. I learned all their good points and all their bad points. Then I started out on the road selling goods to dealers, and became still better acquainted with separators and finally commenced to sell separators that I had manufactured for me, but they did not suit me. By this time I discovered that to get a separator that was perfect—one that suited me—that contained all the good points and none of the bad ones, I would have to build one myself, and I resolved to do it. When I made this resolution I made up my mind that when my separator did come out it would be the peer of them all, head and shoulders above every other make in every feature and it would embody all of the good points of every separator and have none of the bad ones.

The Galloway SANITARY BUILT BY EXPERTS

I hired, and still have, some of the foremost cream separator designers and engineers in the United States. Men and money were no object to accomplish the right results. We bought for experimental purposes almost every make of cream separator. I had studied separators all my life from the practical, experimental, and manufacturing standpoint, and I wanted the best of all and the faults of none. I am a farmer. I have two herds of dairy cattle and operate a milk route in Waterloo from my farm on the old Cedar Falls road, and have always had one or more cream separators in use two or three times per day. That's why the story of the building of the 1917 Galloway Sanitary Cream Separator is almost the story of my life. As I said before, I spared neither men nor money to perfect this separator. The result is the New Galloway Sanitary which is sweeping the trade of the country by leaps and bounds, because it is making good in the hands of the users. Our factories are running day and night to supply the demand. The reason I know separators is because I have taken all the steps necessary to produce a perfect machine. This knowledge took me a lifetime to get and it is all built into the New 1917 Galloway Sanitary.

FOR 375 LB. SIZE

$39.90

OTHER SIZES AT EQUALLY LOW PRICES

Study this separator. Nothing freakish about it—just the plainest kind of cream separator common sense. All parts as nearly smooth as they can be made. All working parts run in spray of oil. Cream shelf drops out of the way when not in use. Only two shafts, both set in long, perfectly fitted bearings. All gear shafts and both bowl spindle bearings are supported by one casting — this means perfect alignment, little wear and easy running. No sharp corners or raw edges in the bowl to break up the globules of butter fat. Separating discs entirely separate from each other. Every drop of milk subjected to full skimming force of the bowl. Milk so distributed in the bowl that every disc gets its share to skim—no more, no less. No flooding in the top of the bowl, no conflicting currents in the bottom. That is the big reason why so few discs in the New Galloway Sanitary skim so much milk. Skimming capacity not guessed at but guaranteed, and not overrated to make the price seem lower. These and many other equally important features make the New Galloway Sanitary Separator the choice of wise and discriminating farmers and dairymen who want the best and will be satisfied with nothing less. It is completely, accurately, truthfully described in my new 1917 catalog which tells how we build Galloway Sanitary Separators from the ground up. Just try this separator. If you like it, buy it. If you don't, send it back. We pay freight both ways. If the New Galloway Sanitary is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is I could not afford to make this ninety-day (180 milkings) trial offer, and I could not afford to guarantee it for ten years, nor have every sale backed by a $25,000 legal bank bond. Ask for my new 1917 book before you buy a separator of any make or kind at any price.

TRAVEL 20,000 MILES! SEE THEM ALL!

Look over every factory in the United States and all of the foreign countries, you won't find its superior at any price. We make it in Waterloo from the finest materials on the best automatic machinery by skilled workmen in tremendous quantities, all parts alike, interchangeable and standardized, and sell it direct from our factories to you at wholesale! We make this separator so good in our factories that I will send it anywhere in the United States without an expert to any experienced or inexperienced user for a 90-day trial at my risk, to test against any make or any kind that even sells for twice as much, and will let the user be the sole judge, because it's the most modern, the most sanitary, the most scientific, the cleanest skimming, the most beautiful in design of any separator made today, and I have seen them all. All I ask you to do is to stand it up and try it side by side with any other make under the same conditions—test it for close skimming, easy operating, easy cleaning, and true rated capacity; then size it up for mechanical perfection, workmanship and material, beauty and design! I will leave it entirely to you to be the judge, which is the best, after you have compared it with any machine of any make, kind or at any price. Its skimming capacity is not guessed at, but guaranteed, and not overrated to make the price seem lower. You will find it is not built down to a price but up to a high standard.

"The crowning achievement of my manufacturing career."

MY 1917 BOOK ABOUT SEPARATORS FREE! WRITE TODAY!

I want you to have it—a big 280-page book, handsomely printed, (which also describes and illustrates our other farm implements). It tells the story of how we took years to design and perfect this 1917 model Galloway Sanitary Cream Separator—to build into it every good cream separator feature. How we build Galloway Separators from the ground up; how they are designed, and many other separator secrets and facts. We perfected this separator before we offered it on the market. We put out in the hands of farmers and dairymen enough of these separators to know that they would stand up under any test whether operated and used in the kitchen, the milk house, the creamery or elsewhere, used two or more times per day, week after week and month after month. How it is as good in the parts you cannot see as in the ones you do see. You do not actually buy it until after you try it. If you find it is not as good as we say it is, send it back after trying it 90 days. It is positively separator perfection at last! Expert designers and engineers worked on it for three years after we were sure it was right and they are still at it. If any part can be simplified they will find a way to do it. If the manufacturing cost can be reduced our efficiency experts will do it, and you will get the benefit not only in high quality but in good service and low price. It combines in the simplest, the most practical and most effective way the best of the old and the best of the new ideas in separator building! That's why I say it is the crowning achievement of my separator manufacturing career! Ask for my 1917 book today. Address

ACTUAL PROOF

"I like it better than one I paid $100 for." John Schrader, Corey, Pa.

"I have used three other makes. Yours beats them all. Costs a third less, skims closer and runs lighter." A. Andrews, Clinton, Okla.

THE HOG ROUTE TO PROFITS.

John L. Fisher, of Green Cove Farm, Rock County, Wis., Gives Hogs the Chief Credit for Doubling Value of His Place in Ten Years.

MORE than doubling the value of a farm within a period of less than ten years requires good management and a close application of business principles on the part of the owner. Still this is the very thing John L. Fisher has accomplished on his farm near Janesville, Rock county, Wisconsin. His chief form of revenue has been the hog. Mr. Fisher is an admirer of the Duroc Jersey hog and his success shows that his choice was a good one. By intelligent management the land which could not find a buyer at $60.00 per acre now cannot be bought at $140.00, and the hogs furnished the capital for its stocking and improving.

Ten years ago "Green Cove" farm was considerably the worse after having lived through a twelve-year period of litigation, during which time the renters had cropped the acres for all they were worth. The first year under the hands of Mr. Fisher eight bushels of oats were the grand yield for each ecre. In five years the crop had been increased so that the production was fifty-six bushels per acre, and then Mr. Fisher started to count his profits via the hog route. He gave $100 for two pure-bred sows and a pure-bred boar to an Illinois breeder. This was a large investment for a beginner. However, the next season fourteen nice pigs were the result. Of these he sold six boars at $20 each, slaughtered one, traded another and still had a small herd left. The six gilts that remained more than paid for additional stock for the farm by their litters.

Mr. Fisher has always sold the scrubs over the scales without much ado, but his breeding stock has gone into the hands of farmers in all parts of Wisconsin and outside states. His most distant customer is Peter Shaughnessy, of Nome, Alaska. Peter reports that the sow sold him two years ago has farrowed a nice litter of ten pigs, which are now promising to establish the Duroc more firmly in Alaska. One of the early purchases of Mr. Fisher was A's Model, a litter mate of Lee's Defender, the famous show boar. This hog raised four litters out of which five boars sold for $100 each, the rest of the litters around $1,000, and the sow itself at the age of four years, sold for $145 at the recent Madison sale. That ought to prove the value of pure-bred breeding.

King Defender, grand champion boar at Wisconsin State Fair, 1916. At 2 years, 4 months, 23 days, weighed 1,010 pounds. Note depth of boar and excellent bone. An active animal standing well on his feet, considering age and size.

There is nothing elaborate about the establishment at "Green Cove." The buildings are of the ordinary kind because Mr. Fisher did not have any too much money at the beginning. The tobacco sheds which formed the only buildings on the farm when he acquired it were torn down and the best lumber used in the construction of a hog barn and general barn. Mr. Fisher took good care to have the framework of these buildings made of good wood, but sidings and floors were constructed with what lumber was available. The hoghouse is 48x25, giving room for twelve pens, 8x10 feet, with an alley way. A row of windows in the roof supplies abundant light and sunshine for the pens. A stove in the alley way keeps the house warm during the months when farrowing is going on. There are twenty-five brood sows and twenty fall pigs in the herd at the present time. Ten litters have already been farrowed, averaging better than six healthy youngsters each. As soon as the pigs have passed through their first three or four weeks of nursing they are removed to the individual A-shaped houses, where with a thick bedding of straw and a warm house, the sow is able to take care of her litter in good shape. This makes room for the other sows, giving them the advantages of the warm pen during farrowing time.

There are five herd boars on the place, the most noted of which, however, being the grand champion boar, King Defender. He is a credit to the breed and was awarded first prize, senior championship and grand championship at the Wisconsin State Fair in 1916. He is a big-type boar, with the long stretchy characteristics that breeders look for. In width and depth of body and in the size of bone and the manner in which he stands on his feet he cannot easily be surpassed. He weighs around 1,150 pounds when thoroughly fitted. His get show all the characteristics of their sire and more than one prize will come to them at the fairs for 1917. Mr. Fisher is a great believer in the showring as a means of giving the breeder the proper type that he should strive to breed into the hogs. It took five years for Mr. Fisher to land a championship, but in all these years he never felt discouraged with his efforts. Each year he went home with a better idea of what the real type of Duroc should include and in King Defender

(Concluded on page 9.)

THE YOUNG STUFF IN FISHER'S HOLSTEIN HERD IS BEGINNING TO SHOW THE CAREFUL WORK MR. FISHER IS DOING TO GET GOOD BREEDERS AND PRODUCERS.

Harrow Buying Made Easy

HARROWS that do the best work and last longest cost so little that there is no economy in buying any but the best. A post card will bring you complete information about International Harvester disk, spring-tooth and peg-tooth harrows. Write the card now and mail it as soon as you can.

In the line there are bumpe disks with rigid frames, fourwear bearings and gangs that are level at every cutting angle. Also disk harrows with independent gangs that can be used for side hill work and for filling dead furrows as well as on level fields. For wet, cloddy fields we have spring-tooth harrows with teeth that cannot work loose and that can be set to any desired cutting depth. Our smoothing harrows have square teeth that cannot twist, and stiffening bars that keep all the teeth at the same cutting angle regardless of extra strain put on any single tooth. Riding attachments and other special features can be furnished for all spring and peg-tooth harrows. We have also a complete line of one and two-horse cultivators.

This spring you will need tillage implements, harrows or cultivators. If you want the best your money will buy, write that post card today and mail it.

94 Years in the ground and unharmed by Rust! —

IN 1823 the City of Cincinnati laid water mains made of oak logs with the centers bored out. To prevent the logs from checking, hand-made iron bands were placed tightly around their ends like the hoops on a barrel. Now after more than ninety years, these are being dug out. The bands are still in good condition because they were made out of iron that was practically *pure*.

"ARMCO" IRON CORRUGATED CULVERTS

are made of iron that is even purer than those old bands. "Armco" Iron is *never less than* 98.84 per cent pure iron while analysis shows that in both cases scarcely more than a trace of either Manganese or Copper can be found; and all their impurities taken together make barely one-sixth of one per cent.

This is why "Armco" Iron Culverts resist rust and give long and economical service. They represent enduring value for the taxpayer's money. Insist on having the longest lived culverts in your highways. The "Armco" Trade-Mark on every section is your guarantee.

For full information on "Armco" Iron Culverts, Flumes, Sheets, Roofing and Formed Products, write the manufacturer in your vicinity, or

Armco Iron Culvert and Flume Mfrs. Association
CINCINNATI, OHIO

CURRENT EVENTS

CONGRESS met in extraordinary session, on the call of President Wilson, Monday of this week. The principal matter to be taken up is the situation existing between this country and Germany. President Wilson holds that a practical state of war has been in existence ever since Germany sank three American merchant vessels, now over a fortnight ago, and left the crews to get along as best they could, several American lives being lost as a result. It is expected that his message will be brief and to the point and will call upon congress to provide him with men, munitions and money to uphold American dignity and protect American lives and property on the high seas. Congress will probably be in session for some weeks, dependent largely upon international events. The president cannot declare war, this being the right of congress alone, hence the necessity of having the body in session at this critical time. The speakership of the lower house was still in doubt at the beginning of the week. Both republicans and democrats had 214 votes, while 218 were needed to nominate. The balance of power is held by five independent members; socialists, progressives and prohibitionists. Champ Clark, of Missouri, is the democratic candidate and James Mann, of Missouri, the republican. Clark claimed to have enough votes, but the result was still in doubt when congress assembled.

THE French and British were successful in pushing the German lines back last week in the terrific fighting which is going on in northern France. The gains were small, but already within the last few weeks over one-tenth of the territory which the Germans have held ever since their dash toward Paris, two years ago, has been won back by the allies. In some places the German lines have been forced back from three to five miles, while in others the gains have been slighter. The allies are not winning without immense loss of life, while in many cases the Germans are voluntarily relinquishing their positions. The general impression seems to be, however, that the allies are gaining slightly. Whether the Germans have some big, new offensive which they need men for has not yet been disclosed.

PRESIDENT WILSON took what steps he could, last week, to put the nation on a war footing. By executive order he directed that the navy be recruited without delay to full authorized war strength of 87,000 enlisted men. Taken in connection with emergency naval construction already ordered, this means that the president has exercised the full limit of his legal powers as commander in chief to prepare the navy for war. For the army, the president directed that two new military departments be created in the Atlantic coast region. This order means that the task of organizing whatever army congress may authorize will be divided among six departmental commanders instead of four in the interests of speed and efficiency in mobilization. The third step was to assume as a national duty the task of protecting American industries from domestic disorders in the event of hostilities. For this purpose eleven full infantry regiments, two separate battalions and one separate company of the national guard were called back into the federal service to act as national police in important districts.

RUSSIAN factory workmen have reversed the usual order and prevented a strike threatened by the "bosses," who have been deposed or had had their authority curtailed as the result of the new liberty and equality. In a certain munitions factory the disgruntled administration seeing their old berths slipping from their grasp, decided to declare the factory on strike, but the workmen, inspired by the appeals of the new government for their support, refused to walk out. On the contrary, they insisted that the foremen directing the engineers should begin work with them at daybreak and put in an equal number of hours. "Every hour is precious," declared the spokesman of the workers. "We must work to support our comrades at the front. Every man who goes on strike will be treated as a traitor and we will not guarantee his safety."

THE farmers of America are appealed to by Secretary Houston to join in agricultural preparedness measures so that the country may not be handicapped by food shortage in meeting the international crisis. Elimination of waste, conservation of surplus and attainment of maximum crop returns were outlined as imperative steps for strengthening agricultural resources. "Both for economic and patriotic reasons," the secretary said in a formal statement, "the American farmer should strive this year for the highest standard of efficiency in the production and conservation of food."

READING matter for a literacy test for aliens under the new immigration law will be taken from the Bible, the department of labor announced. Passages will be selected in more than 10 languages and dialects. "This is not because the Bible is considered a sacred book by many people," said the department's announcement, "but because it is now the only book in virtually every tongue. Translation of the Bible was done with the object of putting it in such simple and idiomatic expressions in the various foreign languages as would make it possible for the common people to grasp the meaning readily and thoroughly."

TWO HUNDRED farmers, bankers, members of the Omaha grain exchange, soil experts and representatives of the University of Nebraska, at a meeting at Omaha last week, appointed a committee to secure and furnish at once to farmers sufficient wheat to reseed damaged winter wheat fields in the state. Reports from winter wheat sections indicate 75 per cent of winter wheat fields in the southern half of Nebraska has been damaged by drouth to such an extent that the farmers were plowing up the wheat, and unable to secure seed, sowing the fields to oats and barley. Arrangements were made with railways for prompt shipment to Nebraska of wheat from Minnesota and other places where seed wheat is available. The wheat will be sold to farmers at cost, which is said to be $2.50 per bushel. E. T. Westborough was instructed to go to Minneapolis as a representative of the Omaha grain exchange and to make necessary purchases of wheat.

Save Your Thresh Bill

YOU can do it with a Red River Special threshing outfit. Good work without breakdowns. The Red River Special saves the farmer's grain. *Beats it out.* "Saved enough more of our grain over other machines to pay our thresh bills," say Andrew Scott and 17 other farmers of Kerwin, Kansas. Buy or hire a

Red River Special

Beating shakers toss and beat the straw just as you would by hand. 90 per cent of the grain is separated at the big cylinder—by "the Man Behind the Gun." Low upkeep and repair cost. Frames made of seasoned hard maple lumber. Steel used where iron lacks strength. Tell your thresherman to get a Red River Special. It means better threshing and less lost time for you. Or write and learn about our "Junior" machine. Small enough to make threshing your own grain pay. *Write for the Red River Special Paper.*

FAMILY CIRCLE TALKS BY THE PUBLISHER

A WISCONSIN PRODIGAL'S RETURN.

WHEN the train from Milwaukee drew up at the depot in a small Wisconsin town the other day, a pine box containing a plain, cheap coffin was lifted from the express car, and a few curious ones gathered around it to read the inscription which the label bore. The name of "the man who was," which was written on it, was an unfamiliar one to the younger onlookers, and it is omitted here, along with the name of the town, out of regard for the feelings of others. But there was one among those who read, in whose mind it awakened memories of many years ago, when a young man, filled with the ambitions and vigor of youth, had set out from that same station to seek his fortune in the great, rushing, roaring city.

He had been born and had grown to manhood on a Wisconsin farm. His father and mother had come there years before, and by dint of hard work and thrift had acquired a competency with which to give their children an education and to start them out on an easier path than they themselves had trod. The father had purchased lands adjoining his Wisconsin homestead, until he had nearly a section which he had planned to share with his son. The aged mother and he had looked forward to the boy settling down beside them and carrying on the profitable and ennobling labor of tilling the earth and making it bring forth and bud, that it might give seed to the sower and bread to the eater. Around his pleasant boyhood home were all the advantages of the day, amid an atmosphere of peace and quiet and wholesome pleasure.

But the lure of the city lights, which reach out for leagues into the darkness, calling the human moths to come and attend the singeing school, had attracted him; the chances for sudden fortune and the mad whirl of the excitement had gone to his brain, like strong drink, so that he had become dissatisfied with what he regarded as a monotonous existence on the farm. So, as the poet put it:

His spirit leaped within him,
To be gone before him then,
Underneath the lights he looked at,
In among the throngs of men.

It was with an aching heart that his mother bade him good-by, while the father saw him go with anxiety and doubts as to what would become of him, amid the temptations and pitfalls of the city. But both knew the uselessness of trying to hold him to the simpler things of life after the fever for a change had gotten into his veins. His young friends somewhat enviously bade him godspeed as he boarded the train and longed for the larger opportunities which he would find in the metropolis.

Then the city swallowed him up and in time he was forgotten, save to the few that held him dearest. At first his weekly letters were filled with hope and encouragement; then they became less frequent and their tone one of cynicism, and, finally, they stopped altogether. His father and mother carried a dull ache at the heart in silence, and the neighbors quit inquiring for him. His younger friends grew to manhood and womanhood, married and settled down on the farms of the community to live out a prosperous existence of comfort and happiness.

Then the city gave him back—not the fulfillment of the visions which he had dreamed when he turned his steps towards it, but a mere shell of a man, broken on the wheel of life; a wreck, crushed by the pitiless grind and struggle of the city; a derelict tossing about with the jetsam and flotsam of life's troubled sea. At an age when he should have been doing his best work on the family acres, with an old age of peace and contentment ahead, and his children around him, he was an old man, worn out with the griefs and struggles, the desolation and the loneliness, the temptations and the sins of city life.

So the few, who still remembered and cared, bore his remains over the hill to the little cemetery by the church and laid him at peace at last, after life's fitful fever, by the bodies of the father and mother whose pride he had once been and whom he had sent to their graves in sorrow—as pathetic and tragic a figure as ever enacted out its little part in this drama we call life.

Every now and then the city gives back its prodigal sons to the country which produced them, and usually it is the same old story. Not till the express car gives up its sad freight do we remember, and then the memories are those which burn. What the city takes and what the city gives back is always different. Sometimes, but not often, it returns a native son who has fought its battles and returned a conqueror, but usually it returns one who has gone down in the fierce struggle for existence, marred and scarred by the blows under which it has crumbled.

I hope that my young Wisconsin readers, who have been thrilled and stirred by the examples of those who have achieved fame and fortune amid the city wilderness of stone and iron, will remember the story of the man who returned in the plain coffin to his Wisconsin home the other day, and realize that his is the rule and the other the exception. Death will seek us out amid the calm peace of Wisconsin's daisy-starred meadows just as surely as amid the clash and confusion of the crowded city streets. It will come inevitably, whether we are among old friends on the farms which we have tilled and improved, or whether we are living in a back-hall bedroom of a city flat, unknown to the man or woman who lives through the wall. But surely it is far sweeter in the last hours, before we, too, go to join the silent majority, to face the future lying on the bed which has been ours for a lifetime with loving friends gathered about, looking out over the feed-lot and the meadow to where the corn and wheat are perhaps rustling in the breeze, and hearing for the last time the lowing of the cattle for which we have cared. Surely, as the twilight of life deepens, we can then close our eyes in peace, feeling that we have fought a good fight, and saying with the apostle, Paul: "Oh, Death, where is thy sting? Oh, Grave, where is thy victory?" Far better than if the Great Reaper found us amid the heart loneliness of the city, which gives so little and demands so much.

HIGH PRAISE FROM A WISCONSIN FARMER.

I CANNOT refrain from printing a cheering, inspiring letter recently received from one of my valued subscriber friends, Mr. C. Koenig, of Logansville, Wisconsin. I have frequently spoken of the great pleasure which I derive from opening the mail and reading the letters from subscribers. Can you wonder at this pleasure, when the day's mail brings me a letter such as this one?

Dear Mr. Pierce:—I noticed some time ago that you would send copies of America to those desirous of having same. Will you please send me a number of same to be used in our home, our school, and our farmers' club meetings?

I have been a subscriber to The Wisconsin Farmer for a number of years, and also a number of other farm journals. Am weeding out the poor ones and ere long they will all be discontinued (the poor ones). But The Wisconsin Farmer is being considered as one of the family and will stay with us as long as it is God's will. If there was only the first page of your paper, and all the other left out, I would consider it worth its price over and over again and wish it would be read in every family. There is just one item that we are all missing very much, Mr. Pierce, and that is Current Events. I am at a loss to understand why you should have same discontinued. I imagine it was on account of the war. With best wishes, I am, very truly yours, C. KOENIG.

A letter like that makes any man—editor, farmer, merchant or manufacturer—take fresh heart and put renewed vigor in his work. It is my ambition to make The Wisconsin Farmer the most practical, dependable and interesting farm weekly in the United States. I know I shall succeed if men like Mr. Koenig continue to write me such splendid letters.

I am glad to be able to assure Mr. Koenig, and all the other members of the family circle, that the Current Events department has been permanently restored. The news of the world is being told therein impartially, week by week, by a skilled observer of happenings. By reading that one department, I believe it is possible to keep quite well posted on the war, on national politics and on the big events of the world.

With the help of the loyal, inspiring friends who write to me so frequently and so encouragingly, I am hopeful that 1917 will prove to be the biggest, busiest and most useful year The Wisconsin Farmer has ever known.

WISCONSIN LOSES A GREAT MAN.

WISCONSIN lost one of her great and good men when A. J. Philips, of West Salem, passed away, a few days ago, at a hospital in La Crosse. It is less than a month since I received a good long letter from Mr. Philips, written in his own hand, a complimentary copy of his well-known book, "Queen Vashti," and a splendid photograph. You would never think, to look at the excellently written letter, every stroke perfect, that the writer was eighty-three years old. He was an eloquent tribute to the health-preserving faculties of country life. For almost seventy years he had been part and parcel of the life of the Badger state and in his death we lose a splendid leader, an inspiring neighbor, a cheering friend and a wonderfully good man.

I had intended to print Mr. Philips' last letters to me in their entirety, but death makes parts of them too sacred for the public print now. I can only hint at the friendly feeling he had for The Wisconsin Farmer by stating that he prefaced the next-to-his-last letter by saying: "I take great interest in your Family Circle Talks. They are so practical and instructive. I began reading The Wisconsin Farmer, the first of any farm paper in this state, some fifty-five years ago and in former years contributed in my weak way some articles for its columns." That his heart still beat tenderly for all dumb brutes was shown by the fact that, in his eighty-third year, he wrote and sent to me, less than a month ago, the following article on the proper care of horses. I hope every reader of The Wisconsin Farmer will read what Mr. Philips had to say and be guided by it; it is sound advice given by a man who knew what he was talking about and who talked straight from the shoulder. Mr. Philips wrote:

I received my first lessons in the breeding and care of the horse in the summer of 1848, when I was a boy of fifteen in Lancaster county, Pennsylvania, from a German farmer whose eldest son was just my age and we were chums for several months. This farmer kept six brood mares to do the farm work and a team of six fine geldings that teamed it on the road constantly. The old gentleman saw I loved horses and colts and he took great pains to tell us boys things he said would be useful to us. One thing in particular he told me was, "My boy, if you ever raise any colts always feed them well by beginning before they are born by feeding their mothers well on good feed." His plan was to feed ground feed of corn, oats and rye with a little bran and a little salt in it at night, mixed with cut hay or rye straw and wet just enough to make the feed stick to the hay or straw. He said he did this for two reasons; first, it saved one-third of the feed, and it was healthier for the animals, as it distended or enlarged their small stomachs and made them colic proof. The fine appearance of his horses and colts convinced me that he knew what he was talking about, so that when I began keeping and raising horses in 1856 I hired a blacksmith to make me a knife out of an old scythe and I made a cutting machine which I used until I could buy an improved one. After I built a silo I bought a new cutter which I used until I quit farming, then I bought a small one to cut the feed for one horse. This one I still own, making sixty years I have owned a feed cutter. I have owned over a hundred different horses and raised sixty colts and I am telling a fact when I say that I never had a horse that I raised and fed in this way that ever had the colic. This is a fact worth knowing. Were I farming again I would do the same for two reasons, the economy and the health of the horse. It is some work, I know, but it pays. When I had three teams at work on the farm I would prepare the feed and have it in the troughs for them to eat as soon as they came to the barn—it made no difference if they were warm. I write this because it is valuable information, especially to beginners. A grade Percheron I raised in this way I sold at four years old in La Crosse where he worked for sixteen years on the pavements and never was sick or missed a meal during the time.

This way of feeding is practiced in the large stables of New York and Philadelphia where from one to three or four thousand horses are kept, and I claim if it pays them it will pay the farmer to feed the same way, and it will pay teamsters also, especially when feed is so expensive.

In a later letter he added: "My principal thought, as humane agent, is to see that our work horses are not allowed to stand too long in front of our saloons, after they have done a hard day's work in cold weather."

There stood revealed the kindly, tender, sympathizing heart of the man who wrote "Queen Vashti," the autobiography of a Guernsey cow, a book entitled to rank alongside "Black Beauty." I shall always be proud of the fact that in the last days of his life Mr. Philips sent me a copy of his famous book. His generosity was manifest when he said, in this note, to me: "I give away many copies to poor boys and to boys that do something useful."

With the hand of death nearing him, he still yearned to do what he could for those weaker than himself, to help the deserving along the pathway to recognition. Mr. Philips was a great and good man; his writings as well as his deeds prove that. We do well to pause, at the beginning of a new season of farming activities, to honor a man who was such a large factor in making Wisconsin

great as a state and first in so many branches of farming.

Reading Maketh a Full Man.

We, whose hair is silvered, and who are rapidly approaching the threescore-and-ten years of the prophets, look back longingly sometimes to the period when we were just attaining manhood and womanhood. There is a sadness about the words, "when we were twenty-one," and yet there should not be, for all life is full of gladness, opportunity and usefulness if we will only do our share and keep our hearts and spirits young.

I was attracted, the other evening, by an article in one of our best weekly magazines (Collier's) bearing the title, "If I Were Twenty-one Again." I read the article with a great deal of interest. I wish I could reproduce it in its entirety, but that is impossible. However, a small portion of it deals so closely with a subject of interest and importance to us all, I cannot refrain from reprinting it. The subject is that of good reading. The writer of the Collier's article goes on to advise the young folks to read—good books and papers, in the main—but read all the time, the best available, no matter what it is. Let me quote his words:

Were I twenty-one again, I should do a great deal of reading. I believe in reading. I don't recall having ever read anything that didn't do me some good. I wish I had read more when I was younger.

If I were twenty-one again I should read many books. I should read the standard novels to get a good way of expressing my thoughts. I should study the great philosophers, but with the temper of an iconoclast. The study of philosophy is a wonderful stimulus to the intellect, but must be undertaken with a mind alert to fallacy. Then there are books which present actualities in statistical form and couple such statistics with authoritative explanatory comment. I refer to the various government reports on various subjects that engage the interest of the man who wishes to be well informed. Our government wastes thousands of dollars printing these reports, which need not be wasted if only our young men would read.

Read! I cannot too strongly recommend good reading. Six hours each week of serious reading is not much, but it may mean the difference between a $20,000-a-year executive and a $25 clerk. Read! Learn to think with—and against—the deep thinkers of the world!

Let me commend every word of the above; let me urge upon all my friends, here in the family circle, that they read as much as possible. The government reports, which the Collier's writer mentions, include many splendid pamphlets on agricultural and home economic topics; get them (they are free) and read them. Patronize the traveling libraries which Wisconsin maintains today. Subscribe to good newspapers and magazines and use them constantly and thoroughly. Buy or borrow good books and read them from cover to cover, the old-time classics and the present-day productions as well. I would like to see the center table in every farm home in Wisconsin covered with newspapers, farm journals, magazines and books; the reading lamp surrounded every night by the entire farm household.

If I were twenty-one again I, too, would read more. Will not those of you who are at that wonderful period take the advice of a man three times your age and read all you can, to the end that you may think clearer, act wiser and be better in every way? "Reading maketh a full man."

A Golden Flood of Wealth

I will admit that large figures have a way of confusing the mind rather than conveying the desired idea, sometimes. We become appalled at the magnitude of the sum or the amount mentioned, thinking in hundreds or thousands, while our informant talks glibly of millions or billions. Yet, even admitting this, I cannot refrain from giving you some stupendous figures which I compiled myself within the last week.

A few weeks ago a friend of this paper wrote and asked me if I could tell him just how much money was on deposit in the state and savings banks of the nation. He seemed to take it for granted that we either knew everything in this office or could find it out. By thus flattering us, I determined I would answer the question, even if it did entail quite a bit of work. So I lost no time in writing letters to the banking department of each of the forty-eight states. The replies are before me as I write. Just offhand, make a guess on the amount of money in these banks, exclusive of the national banks. I have an idea you will miss it by several billion dollars.

My friends, the prosperity of this country of ours is so widespread and at such high tide that we have today in our state and savings banks and our trust concerns (omitting, remember, all the national banks) just exactly $15,544,619,846.05. Think of that! Fifteen and one-half billion dollars on deposit in the banks which the common people patronize (many of them because they do not believe their accounts are large enough to justify them in going to a national bank) and in rural communities where no national banks are in existence. It is perfectly astounding. And not the least remarkable part of it all is that the amount on deposit in this class of banks today is over two billion dollars more than it was one year ago. In other words, thanks to our unsurpassed prosperity and to our growing spirit of thrift, we have saved two billion dollars more in the last year than we did in the year previous.

Here in Wisconsin, conservative bankers estimate that fully 75 per cent of the money in this class of banks is farmers' money. That estimate would be too high in states where manufacturing or mining is the chief industry, rather than farming. But let us assume that, the nation over, one-half of this money belongs to farmers. Here we have seven and three-quarters billion dollars saved from the tilling of the soil, an average of over $1,250 for each of the six million farms of the nation. From whatever point of view we look at it, it is truly astounding.

The fact is, we are experiencing a prosperity, the like of which was never known in this country before, and it is not due to the feverish activity of war stocks nor to the frenzied manufacturing of war munitions in the East. I know this, because one-fourth of the two-billion-dollar increase in deposits in the state and savings banks in the last year has been right here in the grain belt, where we are untroubled by wars or the rumors of wars. Prosperity is being passed around these days as never before, and the farmer is the man who is responsible for this condition of affairs and who is largely profiting thereby. If we can make our fields and our herds produce as abundantly and as profitably in 1917 as we did in 1916, we shall see a golden flood of good times, prosperity and plenty pouring across this broad land of ours.

Pass the Sassafras Tea.

This is the time of the year when, as you drive in to almost any town to do your trading, you notice the drug store windows full of a brown bark. It is the bark of the sassafras root, or "sassafrax," as they call it in some places. There may be some who like the tea which the good wife makes from this bark at this time of the year, but I confess I am not one of them.

Sassafras tea may, or may not, be useful in thinning down the blood. This is still a matter of dispute, and doubtless will be to the end of time. That we need some tonic at this season of the year, there is no denying. March and early April are the "blue Monday" of the year, and anything which will make our blood run smoother and take the lag out of our footsteps is well worth trying, even though it be as distasteful (to me at least) as sassafras tea. I have heard of people who actually claimed to like the decoction which the good wife makes from this bark, but for the most part the majority of the folks I know agree with the humorist who said:

Father always liked sassafras tea—that is, he always liked for us to take it. Every spring he would catch us, hold both our hands, and proceed to thin our blood. If you would listen to father you'd think our blood was as thick as sausage, and that we'd never see May flowers unless he held our nose twice a day and poured sassafras tea into us.

The man who wrote this was doubtless exaggerating for the sake of the laugh which he hoped to arouse, but I cannot but think there is a good deal of sense in his humor after all.

James M. Pierce

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

In Green County, Wisconsin.

The Wisconsin Farmer had something to say last week relative to the prices now being paid for milk to farmers in Green ocunty, who supply the condensery. The April price of $2.40 per hundred pounds amounts to 5 cents per quart and is the best price which the farmers of Green county, who supply whole milk to the condensery, have ever received. Of course, the great bulk of milk in Green county is supplied to cheese factories, and those who have been disposing of their product in this way have been getting unusually high prices for a year past. At some of the limburger factories as high as an average of $3 per hundred pounds has been paid to patrons. This high price has been due to the high price of cheese, the cheese factory being run coöperatively and on such a basis that a farmer gets his share of the high prices of the factory product. While cheese is not so high as it was a few months ago, the profits are still quite satisfactory. Green county is also getting into the pure-bred dairy cattle business, and it is reported to us that about 175 head have been shipped from the Monroe station since the 1st of January. There were ten Holstein calves going out by express to Kansas on the day the writer was in Monroe. These were shipped by Fred Boss and their destination was Harveyville, Kansas. An old-timer standing on the station platform remarked: "I hate to see these youngsters going out of Green county. We need more such stock at home." But the farmers of Green county have learned the value of grading up their herds by introducing good sires.

The banks of the town of Monroe have nearly $3,000,000 of money on deposit and 75 per cent or 80 per cent of this money belongs to farmers. We are glad to see the honest, hard-working farmers of Green county doing so well.

Many New Meadows Winterkilled.

Those who paid $15 and $16 a bushel for clover seed last spring and now find that the crop is entirely winterkilled have some reason to feel discouraged in their efforts to maintain the fertility of the soil. We naturally look upon clover as the one crop in the rotation that brings virtue to the land and the policy of growing small grain and corn continuously is nothing more nor less than a policy of robbery. However, this year the winterkilling may constitute a blessing in disguise, because in all probability the world will be clamoring much more loudly for grain this fall and winter than it will for hay. The loss of the new meadows can partially be made up by the sensible handling of the corn crop this fall, involving either the conversion of part of it into ensilage or curing more than the usual amount in the shock.

Then it must be remembered that the investment in seed last year is not a total loss because a great many clover fields made considerable growth last fall and the root development unquestionably meant a little addition to the fertility supply. Possibly in many cases the crop increase this year due to the growth of clover will more than cover the cost of seed and the labor involved in putting it in. In some instances the seed bed for corn will be prepared by disking the surface, but this plan is only practicable where the soil is rather light, or, in other words, composed very largely of sand. If the texture of the soil is rather close, begin the preparation of the seed bed by plowing. A deep furrow is not necessary in the spring, because it brings up just a little too much inert material.

After plowing it will pay to put considerable work on the surface, particularly so if time enough intervenes between plowing and planting to germinate a crop of weeds. This will be the case where the plowing is done early in the spring and double disking of the soil will be quite in order. At this time when the farmers of the central West are being urged to produce maximum crops to relieve the world's distress, no form of work will pay better than that which involves plenty of harrowing and the free disking of the soil. It brings the seed bed into condition so that plant food is rapidly liberated and it does the crop good right from the start.

It must be kept in mind that where there was a fair growth of clover last fall such a soil this spring will be a little bit warmer than old land and one can afford to delay planting until the old ground is in. Every man who is undertaking to grow corn on sod knows that it grows more rapidly than on old ground and this in the main is due to the rapid decay of vegetation which tends to warm the soil and hustle the crop.

Drainage and Settlers.

Drainage, like land clearing, is a problem in Wisconsin that concerns a very large number of settlers. Thousands of acres of marsh lands which will be productive when properly drained are being sold and where land has not been tiled before the sale the settler is immediately confronted with this job before he can successfully work it. Drainage, unlike land clearing, is not an individual proposition. The farmer cannot drain his wet lands unless he has the outlet and this requires the formation of drainage districts and the building of outlet ditches across other lands.

The problem which interests us mostly, as it affects the settler, is that of thorough drainage when he buys the land. This matter came up for discussion at the meeting of the Wisconsin Drainage Association and it was generally agreed that the problem would remain unsolved until every acre in a drainage district has been given perfect drainage. This means that the land is ready for cultivation, every acre of it, and not that a great outlet ditch has been run through the center, with no tiling of individual lands in the district to make it productive.

The new settler goes onto his land in a drainage district, as a rule, with a mortgage on the land. Then he is obligated to pay the assessment costs against his land for the formation of the drainage district and the building of the outlet ditches and the necessary open laterals. The problem remains to drain the land he owns into this ditch and this requires tiling. The outlets are provided, but up to this time his land is as wet as it ever was. It must be tiled so that the water may be discharged into the outlets and it is this part of the operation for which he has no funds and for which he cannot borrow funds, as his land is already mortgaged and he has arranged the district bonds.

Mr. W. D. Coddington, of Plover, has been among those who favored legislative action requiring that in such districts every acre be drained when the district is organized. This means provide drainage to all the lands in addition to building the outlet ditches and assess the cost of this tiling to the total cost. Under this plan the settler would pay it all in yearly installments; he would have his land drained when he took it and he could take ad-

vantage of the district drainage plan for which he is helping to pay.

No drainage meeting seems complete without a discussion of the assessments of damages and, especially, benefits. This leads to many advocating a law by the legislature requiring that every acre in every drainage district be provided with perfect drainage and that no district might be organized on any other basis. This would undoubtedly do away with much of the disagreements that now arise over assessment of benefits, as it appears an impossibility to reduce to a mathematical certainty the assessment of benefits. In this way the owner of a forty away from an outlet ditch would be provided with the same drainage as the owner of a forty abutting this ditch and in the end it would mean the complete drainage of every acre in a drainage district, which is now the exception rather than the rule in Wisconsin.

Disinfecting Seed Potatoes.

In a special bulletin issued by Mr. R. E. Vaughn, of the Wisconsin Experiment Station, the subject, "Why and How to Disinfect Seed Potatoes," is taken up.

The first section of this question as to why seed should be disinfected is handled by Mr. Vaughn as follows:

Common scab and black scurf (rhizoctonia) injure the appearance and reduce the market value of Wisconsin potatoes. This is especially true where they are to be used for seed.

Blackleg also causes considerable loss in some fields. Farmers frequently do not recognize these troubles and fail to understand the discrimination against their seed.

Scab is the name given to the rough, corky spots on the surface of the tubers. It is caused by a fungus that lives in the spots and once it is introduced may live for several years in the soil.

Black scurf is sometimes spoken of as the "dirt that won't wash off." It is also caused by a fungus.

Blackleg causes a rot at the base of the stem and sometimes on the tubers. It is caused by bacteria.

Seed disinfection prevents loss from blackleg and is the best remedy for scab and black scurf. Disinfected seed should be planted on clean soil. Rotation of crops is also of benefit.

Having given us ample proof that disinfection of seed is advisable, Mr. Vaughn proceeds to tell us how it should be done:

Either corrosive sublimate or formalin may be used to disinfect the seed. Both may be obtained from any drug store. Corrosive sublimate is the better. Before commencing to treat the potatoes, pour some water over them or soak them in a tank of water in order to soften the black scurf and remove the dirt which if present weakens the solutions. Treat seed before it is cut.

The corrosive sublimate solution is made by dissolving four ounces of the powder in about a gallon of boiling water, then diluting to thirty gallons. Treat as many potatoes at one time as the solution will cover, about five bushels. Leave the first lot in the solution one and one-half hours, the second lot one and three-fourths hours, and the third lot two hours. After three treatments the solution is weakened so that it is not very effective. After treatment rinse off the solution with clean water and dry the potatoes at once. Then place them in clean crates and hold under normal light and temperature conditions until growth starts before planting. This aids germination and insures a good stand.

If formalin (formaldehyde 40 per cent) is to be used, take one pint or pound and mix in thirty gallons of water. Soak as much seed as this will cover for two hours. The solution may be used for three or four lots of potatoes.

There may be a great many who have already disinfected their potato seed, as this treatment may be given any time after the seed is dug up to two or three weeks before planting. After treatment the seed potatoes should be kept in clean crates to prevent further lodgment of disease of any kind. Mr. Vaughn says: "Be cautious when using corrosive sublimate, as it is a deadly poison and it must be kept away from the young children and all the farm stock, as the solution is colorless, tasteless, and has no odor. There is danger of it being mistaken for water. Corrosive sublimate corrodes metals rapidly and must be made up in barrels, tubs, wood or cement tanks. The hot water for dissolving the powder can be conveniently placed in glass fruit jars, stone jugs, or crocks. Avoid overtreatment, either by too strong a solution or too long a time, as it may kill the eyes and prevent germination. Potatoes should not be used for food after this treatment. After formalin treatment they may be safely fed to stock if thoroughly washed.

An Appeal to Farmers.

The farmers of America have been appealed to by Secretary Houston, of the United States Department of Agriculture, to join in agricultural preparedness measures so that the country may not be handicapped by food shortage in its efforts to meet the international crisis. Eliminating of waste, conservation of surplus and attainment of maximum crop returns are outlined by the secretary as imperative steps for strengthening agricultural resources.

The Wisconsin Farmer stands pledged to further this movement in every possible way, not only during the coming year but throughout all the future. Regardless of our views on the war and of the necessity or the uselessness of the United States entering therein, it is our duty to make our fields and our herds yield to their utmost. We propose to make The Wisconsin Farmer so practical, dependable, interesting, informative and authentic, during the coming year and the years which shall immediately follow, that it will stand second to none as a factor in bringing about what the eminent secretary of agriculture now pleads for.

May we count on the coöperation of every subscriber in this widespread, far-reaching campaign? Will all those whose subscriptions recently expired, or whose subscriptions will shortly expire, do their part in the campaign by renewing without delay? Will they secure at least one new subscriber so that our already large subscription family may become still larger? By thus working together we shall make farming yield still greater returns here in the grain belt and the farmer come still nearer to the ultimate goal of the maximum of production at the minimum of exertion and expense. We will do our share, will you do yours?

Utterly Fails in Handling Sheep.

In the following communication an Illinois subscriber outlines two experiences that have come under his observation dealing with the question of handling sheep. He writes:

My first observations of a sheep failure occurred when I was about eighteen years old. I worked for a man who did things on a large scale. He had a big farm and always planned to do big things and start in big with everything he launched. He spent most of his time in town talking politics, and left the work to be done by hired hands.

One day when at a sale he had an opportunity to buy a flock of sheep at a fairly low price. Although he had never had any experience with sheep, he purchased seventy-five head and brought them home. It was in the fall that he purchased the flock and by spring he had less than fifty in all, including his lamb crop. His losses were due to two things. First, he started in with too big a flock and without experience. Second, he was not interested in the sheep, or at least did not give them as much attention as he should have done. They got away, somehow, every day or two. He scarcely ever went among them, and perhaps would not at all, had he not been called when trouble came.

In contrast with this bit of experience is the case of another man who began his work with sheep as a shepherd on the farm of a practical farmer. This farmer told me one day how it happened that he engaged the man to care for his little flock, which, though small, was gradually increasing.

"I was leaning over the fence one day," he relates, "when this man came along. He told me he was out of a job and needed something to do. He was willing to do anything, any kind of honorable work. I didn't need a shepherd very much then, because we only had a few sheep, but he seemed willing to work cheap, so I told him he might come next day and I would see how he could handle the sheep barn. He knew absolutely nothing about sheep; in fact, he had not had any experience with live stock, but he took an interest from the start. He really loved the animals, and the more he worked with them the more he seemed to love them. He seemed just as much interested in providing for them as he was in providing for his own wants, and the sheep never lacked for attention after he took charge of the little flock."

The method of caring for the sheep, he, of course, soon learned, under the careful supervision of the practical farmer, and from that time on his success has been, according to his own statement, entirely due to the fact that he spent most of his time with the sheep themselves and tried to put himself in the place of the sheep, in recognizing their wants and needs.

At lambing time he actually lives with them in the sheep barn. He has a room where he can sleep when the sheep do not require his attention, but his ears are attuned to the sheep language, and the least little sound from the sheep pens that means trouble awakens him at once. This man has become a master shepherd. The result is that the flock has become very profitable indeed, and in addition to this, many of the sheep take prizes at most every place they are shown.

Thus the key to successful sheep husbandry can easily be seen. Which is constant care and watchfulness. Watching them as individuals and giving them the care that they need for growth and development.

In spite of the fact that sheep, well cared for, will pay as large, if not larger, profits as any other farm animal, the number of sheep per capita of our population has been gradually lessened. Possibly this is largely due to the fact that sheep have been too frequently cared for in a manner similar to that described by this subscriber in the first instance. To succeed with sheep a man must l e his flock and he must not consider it a hardship to occupy the shepherd's room during the critical season of the year. Unless one makes up his mind in advance that he will give just this kind of attention to his flock he had better keep out of the business, although prospects never were so bright for large profits in the handling of sheep as they are bound to be during the next few years.

THE BEST KIND OF PREPAREDNESS.

High Prices in the Feeding Problem.

In this issue of The Wisconsin Farmer we publish several letters from men who have been making something of a study of the dairy ration under the unusually high feed prices which have prevailed during the past season. We hope that the situation next winter will at least be helped out by good crops this summer and that in another winter we may not be embarrassed by the shortage of feed even though the prices may be high. However, the experiences which are given in the letters herein referred to are likely to be of value to our readers. We hope to present more of these letters in another issue. The first great advantage to be obtained from cow testing is the discovery of those animals which are not earning a profit. Another valuable work done by the cow tester is to gather information relative to production under the several systems of feeding which may have been adopted by members of his association. In general, it may be said that in the past season the quality of roughage has been deficient and in addition to this the quantity has been insufficient for the demands. However, one of our writers this week says that the feeding troubles of the past winter have really been a blessing in disguise and that for the first time in the history of his neighborhood dairymen have made a careful study of the value of feeds and in some instances increased profits have been noted notwithstanding the increased cost in feed.

Farmers Meet at Superior.

A meeting of more than passing importance to the development of Wisconsin agriculturally was held last week in Superior, for the purpose of forming a permanent inter-county association. There were about 200 farmers, fruit growers, sheep men, stock raisers, dairymen and poultrymen present. The railroad lines touching the north shore counties were represented. Commercial clubs of the cities sent delegates and in addition there were a number of bankers and several county agricultural agents.

The association went on record in favor of the bill now before the legislature to appropriate $37,500 to be used in investigating and demonstrating land clearing. This is the work in charge of Mr. Carl Livingston, of the engineering division, college of agriculture. The association also favored a bill now before the legislature providing for filing of chattel mortgages with the county register of deeds and the abolishment of the present system of filing such mortgages with the municipal clerk. The purpose of this bill is to standardize chattel mortgages and make them available as security for bringing outside money into Upper Wisconsin.

Much of the discussion was along the same line as that at the land clearing conference at Eau Claire. There is a determined effort on the part of prominent men in Upper Wisconsin to secure the speedy development of this country. The matter has been talked about for years and the general hope is that this talk may now be crystallized into action.

Carl D. Livingston, of the engineering department, college of agriculture, recently spent a week in Rusk county teaching the short course boys how to pull stumps.

Rusk county is to have a cow-testing association, about half enough cows having already been pledged to Mr. Householder, the county agricultural agent.

WEALTH IN BADGER MARSHES.

FROM CAT-TAILS TO CORN FIELDS—AND GOOD TILE DRAINAGE DID IT.

WISCONSIN'S million acres of undrained land came in for expert discussion at the third annual convention of the Wisconsin State Drainage Association held at Madison on March 27th to 29th. It is safe to say that from the papers delivered at this meeting on the various phases of drainage of marsh land this end of Wisconsin's agricultural resources has been hardly touched upon. The work that has been done, however, is a good indication of the immensity of profits that these marshes can deliver.

Aside from the scientific discussions dealing with the problems of engineering and pertaining for the greater part to the materials and methods to be used in the successful carrying on of the work the program also included one session where the results that have been attained on various farms in the state were discussed. Wednesday afternoon was given over to the growing of crops on peat. Carl Foll, of Deerfield, Dane county, gave his experiences on a 180-acre farm with which he found himself possessed some years back. The land at that time could not be given away, much less sold. Today after proper draining a price of $200 would not induce Mr. Foll to let loose of even one acre. There were on the farm originally fifty acres of upland soil, leaving a balance of 130 acres that could not be used for any purposes whatsoever. When Mr. Foll found that he could not sell the farm he determined to make the best of what he then considered a bad situation and began experimenting with peat. On a side hill he dug several pits which he filled with peat and here his first demonstration of the value of peat for growing crops took place. He later drained an acre and planted it to corn and from the results at once recognized the possibility of making his entire farm arable. He at first used the open ditch method and later followed it by laying tile according to the needs of each portion of the land. In order to have a better understanding of how to handle the soil he sent his son to the short course at Madison. The value of this short course cannot be overemphasized, for it was the making of that farm. Since that time ten acres have been drained each year until most of the land is now yielding from sixty to seventy bushels of corn per acre. An average investment of $25 on each acre made the farm profitable.

TOOLS NEEDED FOR HAND DITCHING.

Matt Vea, of Stoughton, Dane county, gave his experiences with an eighty-acre field which has been reclaimed through the use of proper methods of tiling. The marsh on this land has been pastured during dry seasons for years, but cattle often became mired. The depth of the peat and muck ranged from three to ten feet. At a cost of approximately $25 per acre thirty acres of this eighty have been turned into profitable fields, yielding in the year 1911 2,760 bushels of shelled corn, which the owner sold for seed at a price of $2.25 per bushel. Forty acres more of the same kind of land are now being drained. The last season fifteen tons of sugar beets were harvested on each acre.

Prof. E. R. Jones took the place of E. C. Witte, of Sprague, Juneau county, who was unable to attend. Professor Jones quoted from letters of farmers of Wood county showing the results that have been accomplished through drainage in that section. E. C. Witte bought a half section in the Little Yellow Drainage District in 1913. The land was practically all marsh. The first season there were no results owing to the fact that the drainage ditches were planned too small. However, this was corrected in the following year and by a system of tiling the land has been yielding an average of forty-five bushels of oats per acre during the last three years, some of the acres just newly broken yielding as high as seventy-five bushels. Barley generally runs from thirty to forty bushels per acre, while potatoes do very well. For three years onions have also been grown with great success, averaging around 600 bushels per acre and increasing in yield each year. Anton Brost, also of Wood county, moved to his farm in 1895. Owing to the dry season for years previous to 1895 the land did not show much moisture during that first year. However, water gradually accumulated until it became too wet for farming. Shallow ditches proved of no help at all. Until 1908, when the first drainage ditches were dug in that district according to engineering principles, the farm produced virtually nothing. From then on the land improved in yield, producing on the better sections at the rate of 700 bushels of onions to the acre. Celery pronounced equal to the famous Kalamazoo celery has been grown successfully for the city markets for a number of years. Last year one-fifth of an acre produced somewhat better than three tons of marketable cabbage, the bigger heads weighing around twenty pounds. Six acres of potatoes in 1911 yielded over 1,200 bushels, of which $800 worth were sold, leaving enough for seed and home use. Clover and tame hay does exceptionally well, growing as high as five feet and yielding up to three tons per acre. None of the crops received any commercial fertilizer, the land being supplied only with a liberal amount of stable manure. Work on the drained lands can be begun from a week to ten days earlier than on the uplands. Though the farm has been cropped continuously, yields are steadily increasing instead of decreasing.

The management of peat and muck soil in southern Wisconsin was discussed by W. W. Weir, of the Southern Wisconsin Farm Extension Service. Mr. Weir showed the possibility of making the marsh land productive. He argued that no owner should begin to crop a peat area unless he has definitely decided upon the course he is to follow in handling this land. He urged the farmer to avail himself of the bulletins of the experiment station and the experts of the soils laboratory at the college of agriculture. The college is glad to send a man to look over any land in question and to make a full report with recommendation concerning the land. This service is available to all residents of the state for a nominal fee. The best time to plow the marsh is during the summer. This will decompose the tough sod. However, work generally interferes at this time, so it is usually done in the spring or fall. Buckwheat and flax are recommended on the tougher unpastured sod as first-year crops, while corn will do on any sort of drained marsh in the first year. No lime should be used, as the low lands are usually not acid. The use of proper fertilizers combined with crop rotation containing clover and timothy is a safe and wise rule to follow. Mr. Wier asserts that enough information is at hand concerning southern Wisconsin marsh soils to make every acre produce a crop the same as on the uplands.

Tiling deep peat was discussed by O. R. Zeasman, also of the college of agriculture. He stated that of the million undrained deep peat acres in Wisconsin one-half million acres have no outlet and are waiting for supplementary drainage. The other half million acres require ditches to give the supplementary drains a proper outlet. Mr. Zeasman called attention

(Concluded on page 9.)

Laying Tile by Hand—Experimental Work Under E. R. Jones at Wisconsin Station.

A Reservoir Not a Drain. A Ditch With No Outlet as Good as No Ditch At All.

Growing of Young Percherons.

Something Besides Good Breeding is Essential if a Fair Degree of Success is Attained—By A. D. Prichard, La Salle County, Ill.

THERE is an old saying to the effect that "eternal vigilance is the price of liberty," and this saying, with the change of only one word, applies very pointedly to the business of growing good young Percherons: "Eternal vigilance is the price of success." To work on the supposition that good breeding alone is bound to make a colt good without assistance from other sources is to place one's feet in the straight and short path to failure. Close and constant attention to the needs of the growing colt is absolutely necessary. Some of the more important points to observe I will note below.

The process of development must begin with the mare before the colt is foaled. A brood mare that is in poor physical condition is very apt to give birth to a colt that will be handicapped from the start. Mares in foal should be given sufficient feed to keep them in rugged health and strong heart, but should not be made overfat. At foaling time they should be provided with rations that will produce milk, oats, bran and clover hay being best for the purpose. Occasionally it happens that at foaling a mare has a surplus of milk and in that event the feeding of milk-producing rations should be postponed for a week or two until the colt begins to take more milk. It is well to have mares on grass before foaling, as this has a tendency to cool the blood and keep the bowels in perfect condition.

Colts should be run on grass and should be taught to eat oats and bran, preferably crushed oats, before being weaned. When this method is followed the foal will receive no setback when weaned, but will go right on growing without the loss of a single pound. From weaning time on the youngsters should be given all the feed they will clean up three times a day and should be run on good pasture. It is very desirable to have a barn or other good shelter in the pasture which they can occupy during the heat of the day or in stormy weather. From this time on there is one principal thing to do, keep feeding the youngsters winter and summer, day in and day out, month in and month out, all they will clean up. It is taken for granted that the breeder will look after the health of his stock and keep close tab on their general physical condition.

It is a fact that many American farmers have failed in the work of breeding and developing really high-class Percheron stallions, and practically all such failures are traceable to the lack of proper feeding. To offset this it is also a fact that many American farmers have made conspicuous successes in the breeding of Percherons, and without exception these men are good feeders. It is difficult to understand why some farmers consider it absolutely essential to feed cattle and hogs well to develop outstanding individuals, yet believe that they can produce high-class draft horses on a starvation diet. This serious mistake is often due to the fact that men sometimes consider good feeding of horses simply a means of laying on fat. They say, "When this colt is a four year old I will fatten him and he will be a good one." Not so, brother; the time to do your feeding is during the first three years of a horse's life. That is the period of development and if it is allowed to pass without your making a serious attempt to grow your colt, the animal is sure to be permanently stunted. He will never reach the full flush of size and quality as he would have done had he been well carried along. Do not forget that feeding is not simply a means of putting on fat; feeding grows frame and bone and accentuates good qualities which rich blood lines entitle a horse to have.

One more point which should be given careful attention along with the feeding question is the matter of exercise. The young stallions in the picture which illustrates this article have been running in pasture almost continually since the day they were foaled. Of course, they are taken up during severe winter weather, but the greater part of their time is spent in the open. Every young stallion should have the same opportunity of running in paddock or pasture, for the exercise which he takes develops lung and heart power and develops him in wind and limb. The romp and play in the fresh air and sunshine is almost as essential as the full feed box. Wonders would be accomplished in American draft horse breeding if farmers would fully realize that good breeding, good feeding and abundant exercise are all absolutely necessary to the full and complete development of good Percheron stallions.

Brown County Agricultural Agent.

Elmer A. Carncross, newly appointed agricultural agent for Brown county, Wisconsin, began his labors April 1st. Brown county has 3,600 farms, of which 1,460 contain between fifty and 100 acres.

About 90 per cent of the land area is in farms, and about 65 per cent of this is improved land. Live stock, corn, oats, barley and hay are considered the most important farm products. Detailed analyses and conclusions on the soil resources of Brown county have been made by the State Soils Survey in a preliminary report issued at the college of agriculture.

Brown county is the nineteenth Wisconsin county to annex a farm adviser to its list of regular officials. The other counties which have followed suit since Oneida county began the work in 1912 are Barron, Eau Claire, Price, Langlade, Taylor, Lincoln, Vilas, Forest, Polk, Douglas, Walworth, Ashland, Sawyer, Portage, Rusk, Burnett and Bayfield. Throughout the year these men, either in office consultations, correspondence, or in demonstrations, farm visits, or community meetings, are steadily working in cooperation with farmers for the prosperity of the county units which they serve.

$1150 F. o. b. Racine
Mitchell Junior—a 40-h. p. Six 120-inch Wheelbase

Mitchell SIXES

$1460 F. o. b. Racine
7-Passenger—48 Horsepower 127-inch Wheelbase

Twice as Strong
To Give You a Lifetime Car

Here is a new reason for getting a Mitchell to drive on country roads.

In the past three years, John W. Bate has doubled our margins of safety. Now every important part—by test—has 100 per cent over-strength.

Over 440 parts are built of toughened steel. All safety parts are oversize. Parts which get a major strain are built of Chrome-Vanadium.

Gears are tested for 50,000 pounds per tooth. The springs we use—Bate cantilevers—have never yet been broken.

Several Bate-built Mitchells have already run over 200,000 miles. So it is quite unlikely that a man will live to wear a Mitchell out.

Extra Features

That over-strength, in our opinion, is the chief Mitchell extra. But there are many others.

There are 31 features in the Mitchell which nearly all cars omit. Things like a power tire pump, a dashboard engine primer, ball-bearing steering gear, etc.

And this year's cars have 24 per cent added luxury—all paid for by savings in our new body plant. The Mitchell is now the luxury car of its class.

All Extras Free

All these extras come free in Mitchell cars. They are paid for by factory savings.

John W. Bate has spent millions of dollars in building and equipping this model plant. It covers 45 acres. The one aim has been to build this one type of car economically.

His methods save us on this year's output at least $4,000,000. And all that saving goes into extra values.

The result is extra features, extra beauty, extra strength. Cars built in other ways can't give them.

One Size—$1150

Note that Mitchell Junior, with 120-inch wheelbase, sells for $1150, f. o. b. Racine. You never saw such value in a fine car. Even this smaller car has nearly all our extras.

Go see these new models. See what these extras mean. You will not then want a car without them. If you don't know the nearest Mitchell dealer, ask us for his name.

TWO SIZES

Mitchell a roomy, 7-passenger Six, with 127-inch wheelbase and a highly developed 48-horsepower motor.
Price $1460, f. o. b. Racine

Mitchell Junior —a 5-passenger Six on similar lines with 120-inch wheelbase and a 40-horsepower motor—¼-inch smaller bore.
Price $1150, f. o. b. Racine

Also six styles of enclosed and convertible bodies. Also new Club Roadster.

MITCHELL MOTORS COMPANY, Inc.
Racine, Wis., U. S. A.

In and Around Wisconsin.

Pauline Parthena, a world's champion Holstein cow, owned by R. J. Schaefer, of Outagamie county, died recently. A post mortem showed that a darning needle had pierced the heart. Mr. Schaefer refused any amount for the cow, as she was invaluable for breeding purposes. She was thirteen years of age and won every prize for which she had been entered for some years.

Milk producers in the neighborhood of Footville, Rock county, have effected an organization. James Murphy is the president and Fred Bemis secretary. There were about 200 farmers present at the meeting called to organize and about 100 joined the association on the charter roll. There has been no trouble relative to the prices at Footville, as the condensery has been paying Chicago association milk prices.

Three hundred farmers, milk producers, of Evansville and vicinity, met recently to organize an association. Members of the Janesville and Footville organizations were present to help the movement along. There were sixty some signers to the association roll at the first meeting. Robert Spencer was chosen president, Ed Hyne, vice president; J. H. Campbell, secretary, and V. C. Holmes, treasurer. The association will ally itself with the Chicago Milk Producers' Association.

The stockholders of the Inter-County Coöperative Packing Company, of New Richmond, who reside in the vicinity of Colfax met recently and organized a live stock shipping association. Meetings are to be held on the first Saturday of each month, alternating between the Bank of Colfax and People's State Bank at Colfax. The officers of the new association are: President, John E. Prince, of Bloomer; secretary, W. J. Mathews, of Colfax; directors, J. B. Madison, J. E. Corey and Henry E. Larson.

Mr. A. W. Kalbus, crop statistician for the Wisconsin Department of Agriculture, predicts a good potato yield in Wisconsin this season. The price of seed is high and this may discourage some from putting in large acreage, but, on the other hand, there will be a largely increased number of smaller patches, especially near the market centers. The winter has been favorable for potatoes. The soil last fall had a reasonable amount of moisture, and in the potato districts there has been a heavy snowfall, which will provide plenty of moisture, even though there is a shortage of rain this spring.

Mr. John H. Rich, chairman of the ninth federal reserve bank, has issued a statement to farmers of Wisconsin, Minnesota and the Dakotas. He calls attention to European shortage of wheat and to the fact that Russian supplies are tied up and further that Argentina, which produced 175,000,000 bushels of wheat in 1916 now claims almost a complete crop failure in 1917. The states of Minnesota, North and South Dakota and Montana have about 96,000,000 acres of farm lands and more than one-third of this is unimproved and unused. In common with others who have made a study of the present agricultural situation, Mr. Rich sees the urgent necessity of this year. He calls special attention to the fact that wheat and potatoes are needed. Wisconsin and Minnesota ordinarily produce about 30,000,000 bushels each of potatoes and this supply should be increased if it is at all possible. The present time is the golden opportunity for farmers of this district, according to Mr. Rich.

Walworth county has recently formed the Walworth Federation of Clubs, which includes in its membership the women's clubs, the literary societies, farmers' clubs, the boys' and girls' clubs and the city organizations of the county. In addition to four officers the club has a board of directors which consists of the representatives of each organization on the basis of one director for each ten members. This body will have charge of the next country life conference and arrange for a picnic to be held each summer. The officers elected for the coming year are: George Stoneall, Linn, president; J. J. Cook, Lyons, vice president; Helen Martin, Elkhorn, secretary; R. R. Schwartz, Troy Lake, treasurer.

Short-Course Graduates.

There were 103 graduates of the Wisconsin College of Agriculture short course this year. The closing exercises were held March 22d. The names and home address of the graduates are as follows:

Spray—Sprinkle—Dip

Give your hogs a clean, healthy skin, rid them of pests, give them a chance to thrive. Kill the sheep ticks.

Dr. Hess Dip and Disinfectant

Destroys All Parasites

You'll find it always full strength, always uniform. 1 gallon makes 70 to 100 gallons solution. Use freely about the house as a general disinfectant, in garbage cans, cesspools—wherever there are foul smells or breeding places for disease germs.

Never peddled. Sold only by dealers on a money-back guarantee.

1-Gallon Can, $1.00

Smaller packages as low as 25c (except in the far West and Canada).

If your dealer does not handle Dr. Hess goods, address

DR. HESS & CLARK, Ashland, Ohio

50 New Varieties of Potatoes

can easily be grown from one Package of my genuine **Hybridized Potato Seeds.** Every hill will bring a different variety of Potatoes. There will be a multitude of colors, sizes and shapes.

ALL Valuable New POTATOES are produced from just such seed. One may make your fortune. Here is your chance of a lifetime to get the rarest and most wonderful of seeds. Order at once. Tell your friends, for all will want them.

Package with full directions only..... 15c

4 for 50c 10 for $1.00

North Dakota Lands

NORTH DAKOTA is essentially an agricultural state. In past five years it ranked first in production of wheat twice, twice it was second and once third; always first in production of spring wheat; also flax, equaling production of all other states. Once it was first in barley—never below third; never below seventh in rye or oats. Has made great increase in corn and stock. You can still obtain home there without commission to us, while land is still cheap. Easy terms. Write **at once for plan** direct dealing. J. S. Murphy, Immigration Soo Line Railway, 1269 Soo Bldg., Minneapolis, Minn.

THE HOG ROUTE TO PROFITS

(Continued from page 1.)

he has finally succeeded in embodying the points that go to make a perfect specimen.

The entire herd of Mr. Fisher show the same careful selection and breeding. Each of the sows has the stretch, the width and the depth of the typical Duroc. They are sired by some of the most famous boars of the breed. Blood of Volunteer, Defender, Illustrator, Big Wonder, and many other noted animals is combined in them. The healthy litters further attest to the care that has been shown in the mating.

SHIPPING FOUNDATION HERD OF DUROCS FROM FISHER FARM TO FAMOUS HERSHEY FARM, HERSHEY, PA.

Mr. Fisher has not lost sight of the value of dairying in connection with the hog business. While his revenue has been chiefly derived from hogs, he realized early in the game that hogs without cows cannot be a success. The first purchase of cows was an assortment of scrubs and grades. But a pure-bred sire was placed at the head of the herd in the second year and with careful elimination and weeding the original herd of sixteen scrub cows has now been increased to seventy-one head of pure-bred and high-grade Holsteins. Five years ago five young females were purchased from a Wisconsin breeder for $1,200. These included strains from the families of Pontiac, DeKol and Pauline. Each year a few pure breds were added, which, together with the offspring from the first females, formed the present herd. There are still some grades on the place, but a few years will see these sold and a pure-bred herd of Holsteins reigning supreme.

The improvement of the land after its serious handicap of twelve years was quite a problem. Tobacco cropping had so completely exhausted the soil fertility on this farm that the acre yield for oats was less than ten bushels. So, Mr. Fisher decided to build up the worst fields in a special way. He sowed the first year rye, which he allowed to grow to a considerable height and then plowed it under. The next season he disked and dragged the field at frequent intervals to rid it of all the weeds. In the fall he again sowed rye. This he harvested in the following year, plowed the field and prepared it for clover. His friends told him that it was a shame to throw away clover on such ground, as they were sure no crop could be raised. However, he sowed three quarts of Mammoth clover each way and added a half bushel of barley as a nurse crop. The barley gave a fair yield and the first cutting of clover was also harvested. The second cutting was plowed under and the field was now in shape for other crops.

PARTY OF WISCONSIN FARMERS, ON FARM MANAGEMENT TOUR IN AUTOS STOP AT JOHN L. FISHER FARM.

Three acres of the best land were prepared during the next season for alfalfa. A rye crop, which was harvested early in the year, was followed with a good application of manure and the field plowed in the fall. In the spring, after thorough disking, sweet clover soil was broadcasted over the field to inoculate it. The seed bed was further prepared for the alfalfa by occasional harrowing. In the first week of June the alfalfa was planted with a half bushel of barley. Ten pounds of seed were drilled each way. The field lasted six years, during which time three cuttings were harvested on the average each year, with a yield of from three to five tons per acre. Mr. Fisher now has fifteen acres in alfalfa which follow in the regular scheme of rotation of corn, oats, clover and alfalfa.

Mr. Fisher is a worker and takes an active interest in all divisions. He is the secretary of the Rock County Holstein Breeders' Association and a director in the Milk Producers' Association, which he helped to start. He helped to bring about the sale held at Madison this year which proved highly satisfactory. He is chairman of the futurity committee for the 1917 state fair and a director in the State Duroc Association.

Ten pigs from one sow; total weight 1,641 pounds. This litter won cup at Rock County, Wisconsin, Fair, 1916, and was in the money at the state fair. This litter out of Chief's Col. Duchess.

WHO is there that's got the heart to refuse a man a little chew from his pouch of W-B CUT Chewing—especially if he's a gentlemanly fellow who would appreciate rich tobacco? Once a man gets used to real tobacco, it goes mighty hard with him to swing back to the ordinary over sweetened kind. W-B has cut in two the amount he tucks away in his cheek.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City

IRON AGE GARDEN TOOLS

Answer the farmer's big questions: How can I have a good garden with least expense? How can the wife have plenty of fresh vegetables for the home table with least labor?

IRON AGE Combined Hill and Drill Seeder solves the garden labor problem. Takes the place of many tools—stored in small space. Sows, covers, cultivates, weeds, ridges, etc., better than old-time tools. A woman, boy or girl can push it and do a day's hand-work in 60 minutes. 38 combinations, $8.25 to $15.00. Write for booklet.

Bateman M'f'g Co., Box 470 Grenloch, N. J.

Lindsay Bros., General Agts. Milwaukee, Wis

An Oneida county farmer who raised prize-winning Swedish Select oats last last year sold 1,800 bushels at 70 cents a bushel for seed. Feed oats at the same time were selling at 55 cents a bushel. Many farmers in Oneida county who were among the prize winners at the recent grain show at Madison, have been able to sell oats for seed at $1 per bushel. This shows that it pays to raise the best and also that exhibiting grain as well as live stock on the farm will tend to increase the values.

Wealth In Badger Marshes.

(Continued from page 6.)

to the fact that tile has been laid in peat successfully in the state. This is contrary to many predictions made years ago, but it shows that new methods often succeed where old methods fall down. Wherever possible tile should be laid deep enough so that the peat will be thoroughly drained and the system at the same time be permanent. Permanency means economy. From four to five feet is the depth advised wherever the outlet permits this.

A BIG LAND DREDGE JUST ARRIVED AND "WALKING" TO WORK A MILE AWAY.

Prof. E. R. Jones, of the college, gave a technical talk on the necessity of standards in drain tile. He quoted in his support the results of the leading experiment stations.

The difference between concrete and clay tile was discussed by E. H. Haeger, of Illinois, and H. A. LeRoy, of Chicago. Other papers read at the convention were of a scientific nature and dealt with the various materials used and the methods followed in drainage work. The Wisconsin Drainage Association consists of about 100 members, with the following officers: President, B. M. Vaughn, of Grand Rapids; vice president, A. P. Nelson, of Racine; secretary, E. R. Jones, Madison, and treasurer, A. C. Willard.

Healthy Vegetables

The U. S. Dept. of Agriculture recommends that you rid your seeds and soil of infection before planting, with the greatest known disinfectant—

FORMALDEHYDE
The Farmer's Friend

It prevents potato scab and black-leg that attacks beets and other vegetables. It guards against onion rot and onion smut and smudge, cucumber root rot. It prevents mould in celery, lettuce, parsnips and other covered seeds when applied to the beds before planting. One pint bottle of our Formaldehyde costs 35 cents. Big scientific book with full directions sent free upon request.

Fruits and Garden

Control of Insects and Diseases.

Tried and Proved Formulas and Suggestions Worked Out by the Wisconsin State Horticultural Society.

FOR biting insects, such as the tent caterpillar, canker worm, potato beetle, apple worm (codling moth) curculio, spray the foliage with a poison. For the potato beetle use Paris green.

Paris Green—Formula: Paris green, 1 to 2 lbs.; fresh (unslaked) lime, 1 lb.; water, 200 gallons.

Paris green is heavier than water and the mixture must be kept in constant motion during spraying operations to prevent settling.

Never buy Paris green or other insecticides in bulk; always demand the original package with the manufacturer's guarantee of purity.

Paris green, if used on growing plants greatly in excess of the above formula, may injure the foliage. The addition of the lime overcomes the caustic properties and renders it safe under all conditions.

Dry Paris green may be used pure if applied in small quantities with plaster of Paris or finely slaked lime as a carrier. Different "dry powder guns" have been invented for this purpose.

While Paris green, if pure, is a valuable insecticide, it has been displaced in orchard spraying by arsenate of lead.

Arsenate of Lead (A poison for biting insects)—Formula 1: Arsenate of lead—paste, 2 to 3 lbs.; water, 50 gallons. Formula 2: Arsenate of lead—dry or powdered, 1½ to 2 lbs.; water 50 gallons.

Arsenate of lead may be used in any reasonable quantity without danger of injury to foliage.

It remains in suspension longer than Paris green.

It adheres better to foliage.

It may be used for any purpose for which Paris green is employed in liquid sprays.

White Hellebore—(For biting insects.) Powdered white hellebore is commonly employed to destroy currant and cabbage worms and on fruits and vegetables where more poisonous substances cannot be used with safety.

Hellebore—Formula: White hellebore, 1 oz.; water 2 to 3 gallons.

It may also be used dry either alone or mixed with flour, land plaster, soot, etc.

White hellebore is scarcely poisonous to the higher animals and may be used freely on fruits and vegetables when these are at any stage of maturity.

In addition to the above various poisons are employed such as Scheele's green, London purple, slugshot, arsenate of lime, arsenate of soda, etc., but the fruit grower will do well to pin his faith to arsenate of lead for the control of biting insects.

Sucking Insects—Sucking insects, such as apple aphis, plum aphis, oyster shell scale and San Jose scale do not consume either bark or foliage, but suck the sap of the plant. These insects cannot, therefore, be destroyed by spraying poison on the bark or foliage. We must attack the insect itself. Spray the insects, not the leaves or bark. For this purpose use either kerosene emulsion, a nicotine solution, or lime sulphur solution.

Kerosene Emulsion—Use only to destroy sucking insects. It must be applied to the insects and cannot be used as a preventive.

Formula for Stock Solution—Dissolve one-half pound hard soap in one gallon of boiling water. While hot add two gallons of kerosene. Churn the mixture violently while hot for five to ten minutes or until it assumes a creamy consistency.

Dilution for spraying.—Before spraying add ten gallons of water to each gallon of stock solution, thus reducing it to 6 per cent of oil, which can be safely used on all plants.

Lime Sulphur—(For Sucking Insects.) While kerosene emulsion is effective for soft-bodied plant lice, it is not sufficiently caustic to destroy the armored scale insects, such as San Jose and oyster shell scales. For this purpose a combination of lime and sulphur is used. While lime-sulphur may be made at home by boiling together lime and sulphur, it is a disagreeable job and, owing to the high magnesium content of most Wisconsin lime, the home-made product is not apt to be as good as commercial lime-sulphur. Very good lime-sulphur solution may now be purchased in any quantity from a half pint package to a barrel.

Formula—For San Jose and oyster shell scales apply the following strength to dormant trees only:

Lime sulphur, 1 part; water, 8 parts.

Lime-sulphur at this dilution must not be used on growing plants.

Arsenate of lead may be combined with lime-sulhpur.

Nicotine Solutions.—A decoction of tobacco made by steeping, not boiling, tobacco stems or leaves in water in a covered vessel is an efficient remedy for plant lice. One gallon of boiling water may be poured over a pound of tobacco stems and allowed to stand overnight. This decoction may be used without dilution, but will be effective if diluted with one or two parts of water and will be more efficient if used with soapsuds.

For orchard spraying use one of the numerous nicotine compounds offered for sale, but do not pay more than $10.50 a gallon and this price should procure a 40 per cent nicotine solution. Look for the manufacturer's guarantee or statement of ingredients.

Remedies for the Control of Plant Diseases—Bordeaux Mixture. The control of fungous diseases is accomplished by the use of some form of copper salts, usually copper sulphate, known also as blue stone, blue vitriol, etc.

Copper sulphate in combination with fresh lime forms the standard and well-known fungicide, Bordeaux mixture.

Various formulas are quoted, but the following is now accepted as safe and reliable:

Copper sulphate, 4 lbs.; fresh lime, 5 lbs.; water, 50 gallons.

In general terms, the copper sulphate should be dissolved in one-half of the water, the lime slaked in the remainder and the two solutions poured together. This results in a chemical action giving rise to a new substance preserving the fungicidal properties of the copper sulphate and if properly made will not injure foliage.

Bordeaux mixture is used as a preventive of apple scab, asparagus rust, mildew on grapes, roses and other plants, potato blight and rot, shot-hole fungus on plum and cherry and other fungous diseases.

The two ingredients of Bordeaux mixture may be kept separate in solution without deterioration, but they rapidly lose their value after mixing. Mix only as much Bordeaux as you will use in any one day.

Helpful hints for making a barrel of Bordeaux mixture:

1. Have on hand three barrels and two pails (wood fiber or galvanized iron).

2. Twenty-five gallons of water in each of the barrels.

3. Dissolve four pounds of copper sulphate in one barrel by suspending in a coarse burlap as near the surface of the water as possible; in this way it will dissolve in a short time, while if allowed to settle to the bottom it would require several hours to dissolve.

4. Place the lime in a pail and slake by adding water slowly until a paste is formed. (The lime for Bordeaux mixture should be slaked exactly as for building purposes.)

5. Pour this lime paste into the second barrel and stir thoroughly.

6. Add the required amount of arsenate of lead to the lime water.

7. Now pour into a third (empty) barrel first a pailful of the copper sulphate solution, then a pailful of the lime water, or better, let two persons work at the job, pouring together.

8. The resultant mixture should be of an intense blue color. If any tinge of green appears it is not good Bordeaux mixture.

9. The lime water should be strained to remove the coarse particles which serve to clog the nozzles in spraying.

10. Sufficient lime must be used to combine with all of the sulphate or harm will result. The formula given above provides an excess, but such excess is preferable to a slight deficiency. Use all of the lime water.

There are three things to avoid in making Bordeaux mixture:

1. Do not use iron or steel vessels for the sulphate or Bordeaux. Not only will these be corroded, but the chemical action resulting from continued contact may injuriously affect the mixture. Tinned or galvanized pails are safe if new or if the tin or zinc coating is intact.

2. Do not dissolve the sulphate and lime each in two to four gallons of water and then mix the concentrated solutions; curdling will result and after dilution difficulty will be experienced in keeping the Bordeaux in suspension.

3. Do not fail to stir the ingredients while mixing and the resultant mixture when spraying.

If more than one barrel of Bordeaux is required much time may be saved by using stock solutions.

Dissolve fifty pounds, for example, of copper sulphate in fifty gallons of water by suspending in a coarse sack as advised above; slake fifty pounds of lime in another vessel and dilute to fifty gallons; four gallons from the sulphate solution and five gallons from the lime solution will then contain the requisite amount of ingredients for one barrel of Bordeaux.

Such stock solutions may be kept indefinitely if covered, otherwise the evaporation of water from the sulphate solution would result in a more concentrated mixture and the lime would deteriorate. The lime may be covered with water.

This method of using stock solutions is now employed in all extensive spraying operations. In cases where large quantities of spray material is used elevated tanks are employed from which the solution is drawn directly into the spray barrel or tank.

Potassium Sulphide.—For checking the spread of certain surface feeding fungi, as gooseberry mildew, grape mildew, rose mildew and many of the fungi which cause "damping" of young plants in the seed bed, potassium sulphide may be used to excellent advantage.

Potassium sulphide, 4 ounces; water, 10 gallons.

The solution must be used as soon as made, as it quickly loses its strength.

Any unusual portion of the potassium sulphide should be kept in a tightly corked bottle to prevent loss of strength.

Combining Insecticides and Fungicides.—Arsenate of lead may be safely combined with Bordeaux mixture. In fact, in orchard spraying operations it has come to be a common practice to add arsenate of lead to Bordeaux at every application. By this means biting insects and fungi are controlled at a single operation. No other fact is more important than this in spraying.

When using arsenate of lead with Bordeaux always add the arsenate to the lime water, instead of pouring it into the combined copper sulphate and lime; this is important.

SPRAY

The simplest, most efficient and lowest priced spray pump on the market. No suction; no packing to wear out. Use in bucket, keg or barrel.
—FOR DISINFECTING—with any kind of liquid, whitewash, etc., as well as for spraying trees, shrubs and plants. No sediment can settle in pump; can not clog. The price is low. Write for details or ask your dealer.

The value of this department to our readers largely depends upon their own zeal in submitting questions or inquiries that are closely or remotely related to farm or home affairs.

Questions and Answers.

A Quick Pasture.

I expect to raise pigs from seven sows this spring and I am going to be short of pasture. Have a three-acre field that I can use and I want to know what to seed it with so as to get the best results.

With this limited pasture area no crop will be equal to rape. It should be seeded at the rate of six or seven pounds per acre, using the Dwarf Essex variety. Sow just as soon in the spring as the soil is warmed up enough to sow grain. Do not turn the hogs in until the plants are eight or ten inches high and after that the crop will furnish good pasture through the summer, early fall and late fall months.

The Hog House Floor.

I am going to build a hog house this summer and I would like to know what is the best kind of flooring to use, plank or cement. Naturally, of course, the cement floor will be much more permanent, but I understand there are objections to it when it is used in a hog house.

In a central hog house, where one expects to keep hogs year after year, the concrete floor should be given preference to all other types. Other flooring rots out quickly, it is not so easily cleaned, and it is not so sanitary. The one objection to concrete is that it is cold, but at farrowing time it is a simple matter to throw down a little platform in each pen so that the pigs can be kept off the cold floor for a few days.

Destroying Sow Thistle.

I would like to know how to destroy sow thistle. Is it as hard to get rid of as quack grass, and would it be advisable to plant corn when you are killing it out or would it be better to use small grain?

There are two varieties of sow thistle, one being an annual, depending upon its seed for propagation, while the other is a perennial and lives year after year. The former may be killed out by keeping it from going to seed, while the latter must be destroyed by frequent cultivation. Begin early in the spring and keep the plants from forming leaves until about the first of July, and then millet or cane seed may be seeded thickly. These crops will, in all probability, smother out thistles.

Owner Liable For Stallion Injuring Employe.

I would like to ask if the owner of a stallion in Iowa is compelled by the workmen's compesation act to insure the man he employs to take care of this stallion. During the spring the stallion is moved about from place to place.

While the statute referred to excludes farm or other laborers engaged in agricultural pursuits, the handling of a stallion by an employe could not be considered under that classification. The owner of the stallion would be placed in the same position as the owner of a threshing machine used in threshing grain for others for hire. This is not an agricultural pursuit and the owner of the machine should protect himself by taking out liability insurance just as should the owner of a stallion.

Horse Gorging Grain.

I have a Percheron stallion that wastes about one-third of his grain by simply nosing it out of the box and filling his mouth so full that a considerable part of it is scattered in the stall. I would like to know what means I could take to break him of that habit.

Place several rocks in his feed box. In that case the horse will have to work his nose down in between the rocks and he will not be able to get as big a mouthful as would otherwise be the case. In most instances this plan will correct the habit. Another method would be to feed him in a closed box and let the grain trickle down through a small hole into a second box so that the horse will have access only to a small quantity of the grain at any one time.

Test the Seed Corn.

My seed corn was picked early last fall and I hung it up for a time on wires strung across the corncrib. A month later I put this corn in an upper room in my house and it seems to have kept in good condition. Do you think it would be worth while to test it?

This corn ought to germinate 100 per cent because it has been kept under ideal conditions. It will require but a small expenditure of time to test out, say fifty ears. If six kernels from this number of ears show up strong in the test it will not be necessary to go any further in the matter of testing.

Plowing For Oats.

I have twenty-five acres of cornstalk ground and the stalks were pastured all winter. I am going to sow oats on this field this spring and would like to know if it would pay me to plow the ground or will just as good results be obtained by prepairing the seed bed with the disk?

Under ordinary circumstances a good seed bed can be prepared on cornstalk ground with the disk. Usually a double disking and two harrowings are sufficient to make a good seed bed. The objection to plowing in the spring is that it makes the soil too loose and under certain conditions the crop is apt to lodge.

Hog Lighter Than Claimed.

I purchased a pure-bred hog recently and the seller made a general statement in his first letter that his gilts would weigh 250 pounds. I ordered one of these gilts and while I haven't a scale I do not believe that this sow will weigh more than 200 pounds. Two of my neighbors have seen her and they estimate her at 190 pounds. Of course I have kept the sow several weeks now and do not expect that the seller will take her back, but do you think I got a square deal?

This gilt should have been weighed before being taken away from the express or freight office and if she was found to weigh only 190 pounds when the seller claims she would weigh 250 it is a straight case of misrepresentation. Where the buyer has it specified that he has the privilege of inspecting the sow and returning her if she does not come up to her description then she should be promptly returned. If this is not the case negotiations should be entered into at once for her return. Reliable breeders will not overestimate the weight of a gilt as much as was the case in this instance.

Alfalfa With a Nurse Crop.

A year ago last spring I sowed alfalfa with oats and there seemed to be a good stand, but it turned out to be only about one-third of a stand, so I plowed it up and put the ground in corn. I would like to know what you think about sowing alfalfa again this spring. Would it be all right to use early oats as a nurse crop along with the alfalfa and cut the oats for hay?

On the whole alfalfa will give better results when seeded without a nurse crop than with one. It would be a good plan to put in early oats and cut them for hay so that the ground can be plowed during the summer and a good seed bed for alfalfa prepared. After plowing do considerable harrowing and pulverizing so as to bring the seed bed into good condition and sow alfalfa some time between the 10th and 25th of August. If the land is not sour a good stand should result.

JOHN DEERE IMPLEMENTS

BOOK FREE 156 page reference book—tells all about a complete line of farm implements and how to adjust and use many of them. A practical encyclopedia of farm implements. Worth dollars.

Describes and illustrates Plows for Tractors; Walking and Riding Plows; Disc Plows; Cultivators; Spring Tooth and Spike Tooth Harrows; Disc Harrows; Alfalfa and Beet Tools; Farm and Mountain Wagons; Manure Spreaders; Inside Cup and Portable Grain Elevators; Corn Shellers; Hay Loaders; Stackers; Rakes; Mowers and Side Delivery Rakes; Hay Presses; Kaffir Headers; Grain Drills; Seeders; Grain and Corn Binders.

This book will be sent free to everyone stating what implements he is interested in and asking for Package No. X-64.

JOHN DEERE, MOLINE, ILL.

John Deere Harvesting Machinery

John Deere harvesting machines have worked under every possible condition—severe droughts that resulted in much light grain, short and irregular straw—extremely wet seasons, heavy grain, down and tangled.

However, the John Deere, "The Better Binder", has throughout maintained an unbroken record of success in cutting, binding and tying grain.

The John Deere Grain Binder has wide and high bull wheel—great power.

Main frame riveted—unusually strong.

Three packers instead of two, make better shaped bundles and save grain.

Accurate tying mechanism.

Quick turn tongue truck saves time, relieves horses and makes square corners and full swaths possible.

John Deere Plows for Light Tractors

So far as quality of John Deere Plows for Light Tractors is concerned they are built for the farmer who realizes that it is business judgment to buy a high-grade tractor plow. Don't forget that a tractor plow is not an everyday purchase.

John Deere Plows for Light Tractors are noted for their high-grade work in the field—the real test of tractor plow value.

Before you make your purchase, be sure to see John Deere Plows for Light Tractors. A careful purchase means permanent saving.

High and Level Lift. Two, three and four bottoms.

High and level lift means level plows out of the ground, no cutting of ridges when crossing or turning on plowed ground.

Steady running furrow wheel—does not drag or bind against furrow wall.

Stiff hitch—plow can be backed.

John Deere bottoms, the standard for over 78 years. There is a John Deere bottom for every kind of soil.

Equipped with John Deere Quick Detachable Shares—great labor and time savers.

John Deere Spreader

The Spreader with the Beater on the Axle

Mounting the beater on the axle simplified the construction, eliminated troublesome parts and made possible a successful low-down spreader with big drive wheels. There are no shafts to get out of line, no chains to cause trouble, and no clutches to adjust. The only spreader with beater and beater drive mounted on axle.

Low down, with big drive wheels out of the way. Easy to load.

Revolving rake, driven by manure moving toward the beater—no bunching of manure. Ball bearing eccentric apron-drive—a new and exclusive driving device.

Makes uniform spreading certain.

Widespread attachment for spreading seven feet wide can be furnished for the John Deere Spreader. No chains nor gears. Quickly removed.

THE JOHN DEERE TRADE MARK

To designate and brand their goods, "Deere & Company," use the "leaping deer" trade mark. It is the best known implement trade mark in the world.

The reason that it is so well known is because of the high quality of the implements themselves.

Prestige in farm implements is obtained solely through the superior merits of the goods.

The permanent prestige of John Deere implements has been maintained by the company's strict adherence to principles of manufacture that originally made the goods popular.

The "leaping deer" trade mark is Deere & Company's stamp of approval. It distinguishes John Deere Implements from inferior goods. It means that the implement was made in a John Deere factory, in the John Deere way. It is a guarantee of satisfaction and an insurance policy against disappointment.

Look for the John Deere trade mark when you buy.

JOHN DEERE, MOLINE, ILLINOIS

UPPER WISCONSIN

In Ashland County.

To the Editor:—I have been a reader of your paper for some time, and I notice an Upper Wisconsin department in it, but see nothing from this section, namely, Ashland and Bayfield counties. Thinking it might be of interest to your readers, I will try and give you a few facts concerning this place.

I came here twelve years ago from northern Illinois and bought a section of land eight miles from this city. At that time there were no roads nearer than five miles and only about fifteen settlers in the township. Today our township has about ninety families, with good roads, and the contract let to build eight miles of crushed stone roads at a cost of $36,000 this summer; telephones, daily mail, cream route, a township high school costing $30,000. Don't you think we are entitled to be heard from?

Now there must be a cause for these things. What is it? A soil and climate conditions that can't be beat anywhere, coupled with the energy and industry of our people. Where a few years ago the only cattle that could be seen were a few mean scrubs today you can find nice herds of Guernsey and Holstein cattle, many of them as good as can be found in the state. This condition has been brought about largely by our banks and the Ashland dairy plan.

Our climatic conditions are the best. Do you know that along the south shore of Lake Superior we have a longer growing season than northern Illinois or southern Wisconsin? During August and September when the country south of us is dried up and the farmer is compelled to feed his stock our pastures are at their best. We never know a failure of grass. All small grains yield well here, especially winter grains, wheat yielding thirty to forty bushels and more to the acre. Flint corn will ripen here and the Dent varieties will get to a stage for good silage. Clover yields from two to four tons per acre. Fruit of nearly all kinds cannot be beat anywhere. Potatoes and all vegetables do fine here.

If time and space would allow I could tell you of many enormous yields. The clearing of our stump lands is no longer the hard task it once was. Under improved methods and with improved machinery it is done much more quickly and at a much less cost. The Wisconsin Advancement Association has been a great factor in this work. Our country here is especially adapted to the raising of sheep and will be heard from along these lines. We have at present several flocks ranging from 500 to 1,000 head with numerous small flocks, and are raising lambs weighing seventy-five to eighty-five pounds at five to six months old.

In conclusion, I want to say that I am not a land agent or speculator, but if any good, industrious man wants to better his condition, if he will come up here we shall take pleasure in showing him this country, where any man can by thrift and industry own a farm, which is almost impossible among the high-priced lands of Illinois and the other settled states.

Frank Catlin.

More Pure-Bred Sires Needed.

To the Editor:—A pure-bred sire census has been taken of Langlade county. It shows that out of 1,450 farmers 127 have pure-bred sires at the head of their herds. Of this number 107 are Holsteins, Guernseys or Jerseys and the remaining twenty Short-horns, Red Polled, Aberdeen Angus and Hereford. There are seventy-three Holstein pure-bred sires, twenty-seven Jerseys and ten Short-horns. This census shows that the number of pure-bred sires is entirely too small, as it takes in only 8.4 per cent of the farmers. Even if the pure-bred sires shown are used in addition on one other farm than the place where they are owned only about 15 per cent of the farmers of the county could be considered progressive live stock breeders. Inasmuch as the scrub, "the measly, ornery scrub," as a man recently put it, is the biggest tax on our county, we disike very much to think that there are still farmers in Langlade county who are satisfied to use that class of sires. A pure, bred-for-production sire is worth more, not because he is pure bred, registered and high priced, or has a high-sounding name, but because he has the ability given him by generations of careful selection and mating to produce offspring of equal or greater excellence. The information relative to the pure-bred sires in Langlade county was furnished by the rural teachers.

F. G. Swoboda.

Langlade Co., Wisconsin.

Sweet Clover.

When the stand of sweet clover is thick there is danger of seriously injuring the second growth by cutting it either too low or too late, according to W. M. Budlong. The new shoots spring from the live branches on the side of the stalks that have not been smothered out by the dense growth of the foliage above.

Sweet clover does not bloat stock and hence it is especially desirable as a pasture plant.

Mr. Budlong calls attention to the fact that in chemical composition and feeding value it is almost a balanced ration in itself and it is not surprising that all kinds of stock do well on it.

When sweet clover is sown in small grain in the spring it can be pastured with about two head of stock to the acre from September 1st to November 15th. In the spring of the second year it will support three or four head of steers an acre from the latter part of April until July 1st and sometimes even later.

In his experience with sweet clover Mr. Budlong finds that it should be pastured closely to keep the stalks from growing rank and woody. He says that steers of about 1,000 pounds will gain nearly three pounds daily on sweet clover.

E-B GAS ENGINE

Easy to start—easy to run. Economical—gets most power per gallon. Vertical valves—water cooled head—gasoline kept safely in cast iron base. Cast iron case over crank shaft and connecting rod—keeps out dust, saves oil. Made in 1½, 2½, 4 and 6 h.p. sizes. Type N Binder Engine 4 h.p. Write for catalog. Look for the E-B trade mark. It's our pledge and your guide to quality.

An Appeal For Patriotism

On account of the high cost of feed and the unprecedented high price of meats, many farmers, either from necessity or shortsightedness, are stripping their farms of meat-producing animals.

Small pigs, underfinished calves and even brood animals are going to the slaughter house by the millions.

This, if continued, will create an appalling condition. The meat supply of the world is rapidly diminishing and the burden of taking care of the future rests with the American farmer.

And in view of the conditions that confront the nation, we, as American citizens, appeal to the patriotism of the American farmer to prepare for the greatest meat shortage the world has ever known.

Save the brooders, finish the meat animals, and bend every effort toward replenishing the supply of sheep and hogs and you will do your share toward saving the country from famine.

ATLAS EXPLOSIVES

Get Stumps Out With Less Work

Pulling stumps is slow and costly. "An explosive reduces the labor of clearing land to the minimum. It may be used by any intelligent man," says Minnesota Farmers' Bulletin 134. Get any stump out quickly, and at the same time split it into pieces easily handled, by using

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Atlas Farm Powder is made especially for farm use. It is easy to use—no experience needed. Just bore a hole, load, fire, and work that otherwise would take hours or days is done instantly! Ask your dealer about Atlas Powder today.

You can save money and make money by using Atlas Farm Powder to blast out stumps and shatter boulders, break up hard-pan, do ditching and dig holes for trees or posts. It is the cheapest farm hand you can possibly find.

Send for "Better Farming" Book—FREE

Our illustrated book, "Better Farming," tells how to improve the fertility of the soil, how to grow bigger crops, redeem waste land, improve orchards, etc., with Atlas Farm Powder. Valuable to every land owner. Mail the coupon.

What Our Dairymen Are Feeding.

A Few Interesting Chapters From the Note-books of Men Who Are Testing Dairy Cows and Urging Greater Production.

[Editor's Note.—The Wisconsin Farmer has been receiving some very interesting letters from cow testers, giving some important light on feeding under the conditions which have existed the past winter and spring. Below we give a few of these letters.]

Leguminous Roughage Needed.

To the Editor:—This certainly has been a winter of feed shortage in this section, especially of good roughage. The clover crop was almost an entire failure, while the corn ensiled last fall was not sufficiently matured to make a good quality of ensilage.

To meet this shortage, most of my members ordered high protein feeds last summer. While these helped to balance up the rations, results were not what could be desired. After comparing records taken from herds where alfalfa and clover hay were used, and herds which received timothy, I do not believe that any mixture of concentrates will produce maximum results unless some kind of leguminous roughage is fed.

From farm-grown feeds I would suggest the following as being an economical ration for my section:

Ensilage	30-40 lbs.
Clover or alfalfa	15-25 lbs.
*Oats	200 lbs.
*Corn	100 lbs.

*One pound to every 4-5 pounds milk.

I could not suggest an economical ration where feeds are not home grown, as the prices of these vary too much from month to month.

I have kept an account of all feeds bought by my members this year. The amount is as follows:

	Tons	Price
Ajax flakes	26	$33.00-$48.00
Oil meal	4	39.00- 50.00
Bran	18	22.00- 36.00
Middlings	6	24.00- 35.00
Unicorn dairy ration	32	34.00- 48.00
Dewey's dried grains	7	38.00- 43.00
Beet pulp (dried)	8	24.00- 28.00
Cottonseed meal	2	42.00- 48.00
Alfalfa hay	16	18.00- 23.00

The Unicorn proved to be the most economical, but I do not credit this so much to its nutritive value, but more to the wide variety of feeds it contains.

If we testers can only teach half of our members the value of economical feeding, we can put many dollars in their pockets. Most of my members get The Wisconsin Farmer.

F. A. Gaiser,

Official Tester, Wrightstown, Greenleaf and Brillion Association, Brown county, Wisconsin.

Feed Shortage a Blessing.

To the Editor:—Shortage of feeds of all sorts has proved a blessing in disguise to us. We have learned to concentrate our thoughts on the subject of rations. Our strong ally is the cow tester. Weighing of milk and study of feeds has resulted in increased production, and in some instances at even less cost. A wholesome interest has been aroused in dairy cattle and dairy products. Each cow has been proved to be a lesson in herself in quantity and quality of feed. Previously we supplied the dealers with clover hay and grain, but today it is the reverse case. They have not been prepared to sell us the variety of feeds we need. Good clover hay was not on the market and alfalfa hay was delayed in shipment until the middle of winter. Our timothy hay and straw lacked protein, which, of course, is most needed in a ration designed to produce milk. Our official tester suggested we buy oil meal to supply the protein, and with our home-grown oats and barley balanced a ration one to four using fifty pounds of oil meal, 100 pounds of ground oats, 100 pounds of ground barley, and 200 pounds of bran. Later on, when the alfalfa came on and our barley bin was empty, the testers requested the dealers to introduce gluten and mixed feeds. As fed by a good many of our dairymen, this ration was twenty-five pounds of oil meal, 100 pounds of gluten, 200 pounds of Unicorn, 200 pounds of ground oats and corn, and 200 pounds of bran, or one to four. You will notice that this ration in conjunction with alfalfa provides the cows with a greater amount of protein than the first ration. The cows receive all the hay they can consume. Silage being scarce, was limited to about twenty pounds daily. When there was no more silage we bought beet pulp, which, when soaked in water, makes a very good substitute for silage as a succulent food. Each cow gets about two pounds daily. We have no set rules in feeding grains, but on an average each cow receives about one pound of feed to four pounds of milk. With one eye on the appetite, another on the condition of the cow's bowels, and the other, figuratively speaking, keeping account at the milk pail, we add or subtract oil meal or some other high protein feed as seems to be needed. Really, two eyes are scarcely enough to accomplish the business of dairying successfully. Drinking cups, I believe, pay for themselves two or three times over every year. A small allowance of salt is also fed in the grain. The rations may have been limited to the cheapest grains, but variety is a necessity in feeds. You may be surprised at the quantity and price of grains which we feed, but our milk checks are showing beyond a doubt that this expenditure is a good investment.

Royal Klofanda,
D. V. M., Brillion, Wis.

Feed Quality in Roughage.

To the Editor:—Members of the Sparta-Tomah Cow-Testing Association have been feeding 40 per cent to 80 per cent mill feeds and prepared rations the past winter. Among the most satisfactory feeds which we have purchased are dried brewer's grains, corn, distiller's grains, gluten and wheat bran. These feeds were purchased in carload lots before the prices soared last fall. They were bought on the basis of protein, cost, palatability and bulk. Oats are the most popular farm feed at present. Where we have found it necessary to purchase roughage, alfalfa has paid good returns, even at present prices, by cutting down grain bills and stimulating the milk production. Feed little grain to good cows and watch your losses. Good roughage is the foundation of any economical dairy ration, and all cows demand a certain quantity of roughage. I believe in supplying quantity with quality and lowering your grain bills. Give us more silos and quality in the roughage and supplement farm pastures by seeding more acres than usual for the next legume hay crop. This is a tonic for the soil, and the cows stinted on usual short pastures require more grain when stable feeding begins. Join a cow-testing association and increase your dairy profits.

C. P. Chrysler, Official Tester.

Reports from Janesville, Rock county, indicate that the manufacture of Greek cheese by the Leaf River Creamery Company has been a success. This company is reported to be raising its capital stock from $50,000 to $150,000 and planning to double its capacity. Several prominent Greeks in Chicago have affiliated themselves with this company. There are now nine men employed and it is expected to increase this to twenty-five as soon as more milk can be secured. This company now exports about a ton of cheese per day from the Rock county plant. While some months ago farmers in the vicinity of Janesville were trying to find a market for their milk, the situation now seems to be reversed and the cheese-factory is making efforts to get more producers of milk. This factory has been paying the Chicago association scale for milk.

To Light Your House and Barns

To Cook Your Breakfasts and Dinners

Union Carbide Gives Your Country Home This Two-in-One Service

CARBIDE LIGHTS are as brilliant as the cities' best—they shine from handsome bronze fixtures—they are commonly equipped to turn on without matches.

CARBIDE COOKING RANGES are just like city gas ranges—they furnish heat on tap—instantaneous—steady—uniform heat, without kindling, ashes or fuel to handle.

Fifty pounds of UNION CARBIDE will run a single CARBIDE LIGHT AND FUEL PLANT for weeks.

Without attention the plant will automatically "feed" the range in your kitchen, and as many lights as you care to install in your house and barns.

The beauty and convenience of the light will double the charm of your fireside hours—and the modern gas range will bring relief from kitchen drudgery to the woman who cooks your meals.

During the past fifteen years these CARBIDE Lighting and Cooking Plants have been tested, by country home folks, in competition with hundreds of different lighting plants invented during the same period.

While most of this army of lighting plants have lived a day and fallen by the wayside, the CARBIDE Plant alone has survived and gained steadily in popularity.

One and all, the hundreds of thousands of CARBIDE Plants now in use are practically indestructible—they last most a lifetime.

Instead of daily attention, the CARBIDE Plant needs monthly attention—instead of constant repair, it needs none at all—instead of a single service, it furnishes double service—two in one—twice the value for your money.

We would like to answer any question about the CARBIDE Plant you care to ask—we can send you too, if you wish, with our compliments, intensely interesting Booklets telling you why the light flame is the coolest of all—and the cooking flame the hottest—why the light is called artificial sunlight—how it grows plants the same as sunlight—why the UNION CARBIDE in one hundred-pound drums (always colored blue and gray) is as easy to store as coal—why it won't burn—why it can't explode—how we sell it direct at factory prices to most a million users and distribute it through two hundred warehouses scattered all over the United States.

Write us today for this wonder story, and ask us the hard question you have in your mind—just address

FARM MECHANICS

AUTO, Farm Engine and Farm Machinery Ailments Diagnosed and Remedies Suggested in this Department.

Lubrication.

Proper lubrication is vitally necessary for the successful operation of all machinery, whether in the large factory or on the farm. It is estimated that one-half of all the repairs and breakdowns in the average shop is caused by lack of oil or dirty oil. Doubtless the same average would hold for farm machinery. The average man utterly fails to realize the importance of correct and thorough lubrication. When the bearings of his machine wear out he blames the manufacturer or some other cause; a more frequent use of the oil can might have doubled the life of the machine.

It should be remembered that every joint where one piece moves on another should be lubricated. The amount and kind of lubricant depend upon the conditions. The usual trouble is the lack of lubricant, but trouble may be caused by dirty, gritty oil. It is not a good policy to poke a steel chip or a grain of sand into an oil hole with the end of the oil can spout. That is just what is done time and again, however. Instead of cleaning out the oil holes of the machine before oiling the gum and grit that has accumulated in the hole since the last oiling is pushed further into the hole by the end of the oil can spout. Sooner or later the grit enters the bearing and sticks it or wears it out rapidly.

The old rule for sufficient lubrication was to "pour the oil into the hole until it runs over, and then pour on a little." That was not a bad rule twenty years ago, when there were but few grades of lubricants and high-speed machinery was in its infancy. Now it is necessary to use more judgment, as too much may be as bad as too little; while in other cases a great excess may be advisable. For instance, too much oil in the crankcase of an automobile motor is sure to cause smoke and carbon trouble. Too much oil on the bearings of a magneto will often cause serious trouble, as the excess oil works out of the bearings and causes short circuits. On the other hand, the bearings of the magneto should not be neglected, even though they require only a few drops of oil every thousand miles. Even a watch, to be durable, should be oiled once a year.

The manufacturer and consumer have discovered that certain kinds of oil work best with certain machinery. Gas engines require an oil that cannot be charred easily by heat. Therefore, a mineral oil must be used, as oils containing animal fat char easily. Oils containing considerable animal fat are more suitable for oiling the slide valve of a steam engine, as they are easily converted into a vapor and carried over by the steam into the steam chest; the heat of the steam not being sufficient to char the oil. The transmission gears of an automobile require a thick, heavy oil that will stick to the gears so that centrifugal force cannot throw it off. However, it must run enough so that it will settle to the bottom of the case, where the gears can pick it up. Yellow transmission grease is often used, similar to vaseline. While this grease has fair lubricating properties, in cold weather the gears cut grooves in it, as it does not run. The gears may, therefore, become dry with a bank of grease on each side of them. For this reason, a grease stringy, like molasses is sticky and stringy, is to be preferred.

For oiling the outside bearings of an engine or other machine, a good grade of gas engine oil works well, but a cheaper grade of oil having less heat-resisting qualities often works equally well. This oil is commonly called "machine oil." A good test for either gas engine or machine oil is to squeeze it between the fingers. It should not be easily squeezed out between the thumb and finger, and have a greasy appearance and feeling.

When pipe threads, bolt threads, etc., are cut with dies, an oil known as lard oil should be used on the dies and on the metal being cut. This makes a smooth thread and also makes the die cut easier.

Soap makes a good lubricant for wood where it is protected from the weather. Graphite, a black, shiny substance similar to charcoal, but having a greasy feeling, is a much used lubricant. It is often used in steam cylinders. Mixed with oil or tallow it is a good lubricant for sprocket chains. It is often used with transmission grease. Wood bushings treated with graphite are used to some extent as an "oil-less" bearing, no other lubricant being required.

There are many grades and brands of gas engine oil recommended for automobile engines. An old engine requires a thicker oil than a new one, and some types of engines require a thicker oil than others. A good oil is not easily thinned by heat, although heat tends to thin any oil. The large oil dealers have charts showing what grade of oil is best suited to every make and model of car.

Gas engines having the splash system of lubrication do not work as successfully burning kerosene as engines having a forced feed oiling system with the oil fed a few drops at a time from an oiler. Some unburned kerosene is sure to work down into the crankcase. This thins the oil in the crankcase, making it unfit to lubricate.

Questions and Answers.

Hitching Two Binders Behind a Tractor.

Please show how to hitch two binders behind a tractor so as to get best results.

Answer.—You should write direct to the manufacturer of the binders you intend to use. A rather complicated appliance is required and it varies with the different types of binders. The company that made your binder can probably supply you with the necessary attachments cheaper than you could make them.

Buying Chain.

I have a car equipped with a compressed air starter. The air pump is run by a silent chain. Can you tell me from whom I can buy the chain? The company that makes the car wants about three prices for the chain.

Answer.—It is hard to purchase this type of chain in small quantities, as much of it is used on war machines and the supply is scarce. You might consult your hardware dealer, but we doubt that you could obtain it much more reasonable than from the auto company. Labor and material are very high at present.

Uses Too Much Gasoline.

I have a 1912 E. M. F. touring car that is bothering me. It pulls well

Power Depends on Piston Rings

Your best guarantee of power is a set of

McQUAY-NORRIS LEAK-PROOF PISTON RINGS

—the Genuine

So carefully made, so exactly adjusted they stop compression leakage and get every ounce of energy out of the gasoline; keep down surplus oil and reduce carbon. So strong and enduringly elastic they will outlast all other piston rings.

Get the Genuine. All garage and repair men can give you immediate service on them. If you have any difficulty getting them, write us. We'll see you are supplied.

Book on Compression—Free

"To Have and to Hold Power"—the standard handbook on gas engine compression. Every farmer who runs an automobile, engine, tractor, etc., ought to have it.

Manufactured by

McQuay-Norris Manufacturing Company
2820 Locust Street, ST. LOUIS, MO.

Portable Power For Your Farm AT ONE-SIXTH COST

Put your Ford to work grinding corn, pumping water, running elevator, sawing wood, dozens of other jobs requiring power, on your farm or your neighbor's. Power as reliable as your Ford engine; power that you can move anywhere on the farm in five minutes.

Schluter AUTO BELT ATTACHMENT ON OR OFF IN 15 SECONDS

No matter if you already own a gas engine a Schluter for your Ford will earn its way prove handy around the farm, and especially in case of break down of other engines.

The Schluter Auto Belt Attachment costs only $22.50, (less than 1-6 cost of 6 or 8 h. p. gas engine) and with the Ford engine gives you most reliable and cheapest power possible. Takes less gasoline. No changes in car. With our crank socket just hook on the Schluter and start to work. Attached in less than minute's time without screws, bolts or nuts. No wear on car. Nothing runs but engine.

A proven success and sold with our five day free trial money back guarantee. Order direct from this ad or send today for our big Free Circular.

Tell what you have for sale in a little advertisement in THE FARMERS' MARKET. Does not cost much and may be worth a lot to you. Six cents a word per insertion. See page 16.

when it speeds up. It has good compression. It has been driven about 5,000 miles. It has made about 3,000 miles since the vales were ground. The spark plugs are clean, and the spark is timed right. I have always driven the car myself, and have taken good care of it. It used to make fifteen to twenty miles per gallon of gasoline, but now it will not make over six on a gallon. We took the carburetor to a garage, but they said that there is nothing wrong with it. The cylinders were cleaned and the magneto repaired without results.

Answer.—Examine the gasoline tank and the gasoline line for leaks. Since your car runs well a leak is the most probable cause of the trouble. A late spark or a faulty carburetor adjustment would also cause an excessive use of gasoline. It mightt be that the carburetor is flooding and the gasoline running out at the bottom, due to a defective float or dirt under the float valve. If the exhaust is sooty you are using too much gasoline and the carburetor should be adjusted for less gas.

Oil Cups Fill With Gasoline.

I have an International two-horse-power vertical gasoline engine. After running a while, the oil cup fills with gasoline. Have tried different oil cups, but they all do the same. The engine did not do this when new.

Answer.—In the first place, your engine is getting too much gasoline. Cut down the supply as low as possible without the engine losing power. In the second place, the rings are probably somewhat worn, allowing the gasoline to run down past them. The compression in the crankcase then forces the gasoline into the grease cup. A cup with an air-tight cover would probably work all right.

Hydrogen and Oxygen.

If water is decomposed into oxygen and hydrogen by electricity, can electricity be produced in any way by the two gases? What is the difference between hydrogen and carbonic acid gas?

Answer.—We know of no way of producing electricity directly by means of either oxygen or hydrogen, either singly or in combination with each other. When mixed in the proportion of two volumes of hydrogen to one volume of oxygen, the two gases combine if ignited by a spark; water being formed by the combination. The combination causes a violent explosion. Hydrogen is an elementary gas, that is, it cannot be separated into other gases. It is the lightest gas and is, therefore, taken as a standard for measuring other gases. It is colorless, odorless and invisible. Carbonic acid gas is a combination of one part of carbon and two parts of oxygen. It is also invisible, but is a comparatively heavy gas. When wood burns the carbon of the wood combines with the oxygen of the air and carbonic gas is formed. It is similar to the "fire damp" which is often found in old wells. It sinks to the bottom of the well because it is heavier than air. A man will smother to death if lowered into a well containing this gas. A light will not burn in this gas; therefore, it is best to lower a lantern into a well before a man goes down into it. If the lantern goes out the well is not safe.

Making a Magnet Charger.

How is a home-made magnet charger made; using a bar of iron in the shape of a large horseshoe with the ends brought together to correspond with the magnets? How many turns of wire should be on the bar, and how connected? Should any resistance be added; or an ammeter? How can a weak magnet be detected, and how can I know when a magnet is fully charged? Can this outfit be connected up with the battery charging outfit, and can both be used at one time?

Answer.—Make the bar about fourteen inches long. The bar should be at least as wide as the magnet bars and about twice as thick. It should be made of soft annealed wrought iron. For use with a six-volt storage battery wind about one and one-half pounds of single cotton-covered copper wire on each leg of the iron core; winding the coils right hand on one leg and left hand on the other. The coils may be wound from one continuous wire, the ends of the wire forming the terminals to attach to the battery when charging a magnet. There should be not less than 800 turns on the above magnet, which is calculated as having a cross-sectional area of one square inch. No resistance would be required with the above coils unless the voltage of the charging current is over twenty-four volts. If connected a very short time it might stand a higher voltage. The danger is from heating the wires hot enough to injure the insulation.

The magnets of a magneto should be strong enough to attract a bunch of iron keys held within a distance of one inch by a chain six inches long. Of course, this is not a very accurate test, but it will usually answer all requirements. As a rule, it is best to let the magnets alone, as one not familiar with them may demagnetize instead of magnetize them. The magnets must be magnetized in the proper direction and the magnetism retained by a soft iron keeper until they are slipped over the pole pieces of the magneto. It only takes an instant to charge a magnet. You could do so while charging your battery or when your generator is not running; in either case connecting the terminals of the charged coils to the terminals of the storage battery.

Making a Tractor.

I have a forty-horse-power Maxwell car. I would like to convert the same into a farm tractor. Would it be practicable? How many times should the speed be reduced? How should the rear wheels be fixed? Please give all the information necessary. Could it be used as a tractor and changed to a truck? How should the speed be reduced?

Answer.—We have always tried to discourage the idea of the home-made tractor; nevertheless some farmers have built fairly successful machines. A good tractor is hard to design and build; even with the resources of an expert engineering force and a good machine shop with every facility for obtaining or making the necessary parts. The farmer without the necessary tools and materials has a poor chance of success. Of course, a large part of the tractor may be made by a blacksmith and there are several companies that sell differentials and wheels. Many parts may be obtained from old tractors, so the problem is not entirely hopeless for the ingenious farmer.

The following points may be of assistance to you:

A tractor will seldom pull much more than half its own weight.

The speed of the tractor when plowing should not exceed three miles per hour. About five miles per hour is as fast as the tractor should travel on ordinary roads. A higher speed will soon rack the machine to pieces.

Allow six to ten engine horse power for each fourteen-inch bottom you wish to pull. For tractor service an auto engine should not be run at a speed much greater than 1,000 R. P. M.

Several systems of gearing for tractors have been published in these columns during the last year. You might be able to mount your engine and transmission lengthwise of the tractor frame and drive a large bevel gear on the differential by a small bevel pinion on the end of the propellor shaft of the auto, thereby obtaining the necessary speed reduction.

The lord mayor of Liverpool's offer to find experienced Chinamen for farm work arises from the fact that a good many Chinese arrive at Liverpool from various vessels and are willing to accept employment on the land, says a London newspaper. The lord mayor expresses the opinion that at least some farmers in the district are not averse. A number of leading farmers in the Liverpool district, however, expressed disfavor with the lord mayor's proposal for the employment of Chinese on the land. They admit being short handed, but preferred thus to remain rather than employ Chinese.

Dead cattle are lying everywhere and hundreds are in danger of starving in the territory north of the Great Salt Lake in Utah. Many of the ranchers in that district are without a pound of hay and have very little of any other kind of feed. The retail price of hay has reached the record mark of $40 a ton.

Come to Detroit The Automobile Center and LEARN THE AUTOMOBILE BUSINESS

33,000 sq. ft. of additional floor space

DETROIT trained men get preference and get jobs quickly. No other city can give what Detroit offers. Think what it means to learn in the Michigan State Auto School. Factories endorse our school, glad to employ our graduates or offer them territory in which to sell cars and start garages. Unlimited opportunities. 71% of Automobiles are made in Detroit. You're right in the Heart of the Auto Industry. Men are needed everywhere as testers, repair men, chauffeurs, garage men, and salesmen. Hundreds of our graduates start in business for themselves.

Earn $75 to $300 a Month

We teach you to handle any auto proposition. You graduate in from ten to twelve weeks. Our equipment is new, up-to-the-minute, and complete. No old, obsolete motors, chasses or electrical equipment used. Students actually build cars from start to finish, getting factory training in assembling, block-testing, road-testing, everything. Special complete course in Oxy-Acetylene brazing, welding and cutting, separate from regular course. Learn to time motors, rebore cylinders, adjust carburetors, magnetos, valves and bearings, quickly and accurately. Six-cylinder Lozier, Chalmers "6," Detroiter "6," Overland, and 8-cylinder King are used for road instruction. We have a new Chalmers "6-30" chassis with 3400-r. p. m. motor, the latest thing out. Also

Willys-Knight 1917 chassis
Studebaker "6" 1917 chassis
Hudson Super-Six 1917 chassis
Cole "8" 1917 chassis
Detroit Electric 1917 chassis
Saxon "6" 1917 chassis
Maxwell 1917 chassis
Oldsmobile "8" 1917 chassis
Briscoe 1917 chassis
Winton "6" chassis
G. M. C. Truck

All completely equipped for students to work on. We have more than 20 motors in our block-test department—2 cyl., 4 cyl., 6 cyl., 8 cyl. and 12 cyl. Our electrical department is complete, having every standard starting, lighting, and ignition system, including Delco System as used in Buick, Hudson, and Packard Twin "6."

Detroit Is the Place to Learn---Start Any Time

There are 44 auto factories in Detroit and vicinity and 140 accessories and parts factories. Our students have the privilege of going through any or all of them. We now operate Westinghouse, Auto-Lite and Bijur Service Stations. This has added thousands of dollars' worth of equipment and makes our electrical department unequalled. Students get actual experience in handling all kinds of electrical auto equipment and taking care of trouble. We have just installed a Sprague Electric Dynamometer for block-testing purposes for students' use. Ours is the only Auto school having this equipment. Auto factories need Dynamometer men constantly. Factories and garages are paying big salaries to men who know how to handle electrical equipment quickly and properly. Detroit is the automobile center. You get practical instruction. School open all the year. Enter classes any time, any day. Three classes daily, morning, afternoon, evening. All instructors are members of the Society of Automobile Engineers (S. A. E.). There is a great demand for Michigan State Auto School students. Auto factories write and phone for men constantly.

Money Back Guarantee

We guarantee to qualify you in a short time for a position as chaffeur, repair man, tester, demonstrator, auto electrician, garage man or automobile dealer, paying from $75 to $300 monthly or refund your money. We have constantly more requests for Michigan State Auto School Graduates than we can supply.

Follow the Crowd to the Michigan State Auto School—Come to Detroit.

This Is One of the 1916 Classes.

Additional Building and Equipment

Thousands of dollars' worth of new equipment, plenty of room for students to work, at 687-89-91 Woodward Ave., in addition to our building at 11-19 Selden Ave. Our school has grown by leaps and bounds, students come from all over the world. We are constantly adding new equipment. Our electrical department is thorough and complete.

Factory Co-Operation We have completed arrangements with the Auto factories to put them in touch with men who intend going into business for themselves. Men who know the auto business from A to Z are in biggest demand. Remember, the price of course is based on giving full value. Graduates in the complete auto course are competent to handle farm tractors.

Auto Factories Endorse Our School

The Leading Automobile factories in Detroit, as well as in other cities, endorse our school. They have been watching our school and graduates for years and are satisfied. They are putting their latest model, complete chasses in our school for our students to work on. They are employing our graduates in their factories and service stations and assisting them in opening garages and salesrooms. They allow our students to go through their factories. They need trained, competent men and are asking for more of our graduates constantly.

The Michigan State Auto School in Detroit, Michigan, the heart of the Auto Industry, is endorsed by the Leading Auto Factories and receiving their hearty co-operation. What better endorsement could you ask?

News of the Sale Ring.

Marshall's Holstein Sale.

Geo. Marshall's dispersion sale of registered Holsteins at Darien, Wis., March 20th, more than came up to the expectations of the management. Much credit is due Mr. John G. Voss, sales manager, for the excellent manner in which the sale was conducted. Mr. Voss by reason of his wide experience in raising Holsteins and vast knowledge of Holstein pedigrees is qualified to give a splendid account of himself in the box. One of the reasons these cattle brought such good prices was that Mr. Voss presented so clearly and forcibly the merits of the animals as they were lead into the ring. There were 49 head sold, including much young stock. Leaving out three small calves, 46 head average $276; 17 head sold for $300 or above; 12 for $400 or above; seven for $500 or above, and $650 was the highest price paid for any animal sold. This sale taught two lessons to the close observer. In the first place it demonstrated the wisdom of properly caring for a herd and giving it an opportunity to do its best and in the second place it showed the mistake of using a sire that is inferior to the herd in which he is used. If these splendid foundation cows had been bred to a 30-pound sire that was capable of throwing good individuals the young stock would in all probability have sold for a third more money. The mature cows were the drawing cards of the sale and Mr. Marshall was certainly well repaid for the high state of production he had them in the day of the sale. Mr. John Kempkin, of Burlington, was the heaviest buyer and purchased seven head in all. Five of this number averaged $502. Mr. Ray Beers, of Honey Creek, was the second largest buyer and purchased three of the good ones which averaged $550. The following is a list of sales:

FEMALES.

Anna Baker De Kol, Nov., 1909; Ray Beers, Honey Creek, Wis. $600
No. 2½, Oct., 191½; Homer Smith, Delavan, Wis. 230

7 bulls .... 1,000; average.... 142.85
49 head .... 12,885; average.... 262.95

Percheron Dispersion Sale.

Louis P. Sutter and Lewis Lewellin & Sons' dispersal sale March 21st at the Wisconsin State Fair grounds was well attended and brought buyers from Ontario, Canada, Illinois, Indiana, North Dakota, Minnesota and Wisconsin. The good animals of the sale sold well, while some of the young stock that was somewhat in the rough did not bring especially good prices. There were 59 head sold which brought a total of $20,985, or an averaged of $355.67 per head. Mr. Sutter's big stallion, Marmot (106188) 105825, topped the sale by bringing $1,240. He is a good, straight forward mover possessing an excellent set of legs and feet and has sufficient weight to make him the right type of a draft sire. Lewellin & Sons' mare, Pearl (71150), topped the prices paid for mares by bringing $1,175. She is a show mare, having much quality in addition to being one of the best bred mares in the state of Wisconsin. Mr. E. E. Randall, of Hustisford, is her present owner. It is fortunate for the state that animals of such quality are not allowed to leave its borders. The sale in general was considered very successful, which in no small degree was due to the sale manager, James G. Boyd and Col. Joe Walker and C. E. Donovan. The following is a list of sales:

FEMALES.

Pearl, May, 1910; E. F. Randall, Hustisford, Wis. $1,175
Priscilla, April, 1905; Reynold A. Schmitt, Sun Prairie, Wis..... 425
Valentine, Feb., 1915; F. G. Beiseker, Tissinden, N. D. 400
Helena, Mar., 1907; E. E. Randall.. 755
Grenade, April, 1905; E. E. Randall 475
Nante, March, 1913; Babson Bros., Chicago, Ill. 510
Neptune, April, 1913; F. G. Beiseker 325
Nature, April, 1913; Babson Bros... 440
Narquoise, May, 1913; Babson Bros. 335
Nedde, April, 1912; S. F. Guttenstein, Milwaukee, Wis. 395
Grace, Hay, 1910; John Whalen, Madison, Wis. 485
Kyreille, May, 1911; J. W. Peterson, Litchfield, Minn. 245
Ella, April, 1911; Jacob Allamaras, New Rockford, N. D..... 280
Korene, March, 1904; S. F. Guttenstein 80
Bell, May, 1912; Fred Stegler, Calhoun, Wis. 275
Nitouche, April, 1913; S. F. Guttenstein 430
Nasarde, March, 1913; S. F. Guttenstein 500
Nepe, March, 1913; S. F. Guttenstein 630
Idole, April, 1908; S. F. Guttenstein 300
Phyllis, June, 1912; Babson Bros.... 500
Pansy, May, 1911; S. F. Guttenstein 250
Easter, March, 1913; E. E. Randall 295
Glory, April, 1915; F. G. Breiseker.. 400
Illegalite, Feb., 1908; S. F. Guttenstein 440
Tiquette, March, 1914; Fred W. Stubley, Black Earth, Wis..... 300
Fanfan, May, 1914; Thomas Posvers, Astico, Wis. 225
Mabelle, April, 1915; E. G. Bright, Terry, Ont., Can. 245

oncluded on page 24.)

FARM LANDS.

NORTH DAKOTA is essentially an agricultural state. In past five years it ranked first in production of wheat twice; twice it was second and once third; always first in production of spring wheat; also flax, equalling production of all other states. Once it was first in barley—never below third; never below seventh in rye or oats. Has made great increase in corn and stock. You can still obtain home there without commission to us, while land is still cheap. Easy terms. Write at once for plan direct dealing. J. S. Murphy, Immigration Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minnesota.

OREGON & CALIFORNIA RAILROAD CO. grant lands. Title to same revested in United States by act of Congress dated June 9, 1916. Two million three hundred thousand acres to be opened for homesteads and sale. Timber and agricultural lands. Containing some of best land left in United States. Now is the opportune time. Large sectional map showing lands and description of soil, climate, rainfall, elevations, etc. Postpaid one dollar. Grant Lands Locating Co., Box 610, Portland, Oregon.

RUSK COUNTY LANDS! In the great potato-growing district of Northern Wisconsin, offer great opportunities for industrious farmers. We want people, looking for homes, in this ideal, partly timbered district, to write us so that we can tell them why it is to their interest to buy their lands of us. Send name and address today. Flambeau River Lumber Co., Owners, Station D, Ladysmith, Wisconsin.

THINK of your children! They will need land. They will soon be out for themselves. Aitkin County offers the best possible opportunities. Good dairy land direct from our Company can be bought cheaply and on easy terms, now. Why not send today for our interesting illustrated literature? It's free. Arnold, Land Agent, Rock Island Railway, 153 Wolvin Bldg., Duluth, Minn.

LANDOLOGY, a magazine giving the facts in regard to the land situation. Three months' subscription, FREE. If for a home or as an investment you are thinking of buying good farm lands, simply write me a letter and say, "Mail me LANDOLOGY and all particulars FREE." Address Editor, Landology, Skidmore Land Co., 310 Skidmore Bldg., Marinette, Wis.

HERE IS YOUR CHANCE—Get a home; $1.00 per acre down and long time on balance. Hardwood timber land with timber enough to pay for the land and build your buildings, close to market, school and cheese factories. Clay loam soil all tillable. Taylor Co., the clover and dairy belt of Wis. Rib River Land Co., Medford, Wisconsin.

A SMALL farm in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Joaquin Valley illus. folders, free. C. L. Seagraves, Ind. Com'r, A.T.& S.F.Ry., 1959 Ry. Ex., Chicago.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

120 ACRES, 60 clear, 20 pasture, 40 good wood, good frame buildings, school-house adjoining land, cheese-factory ¾ mile; 6 miles to Wausau, 2½ miles to Kelly Station. With all stock, crops and machinery, will sacrifice at $7,500.00; $2,000 cash, balance on easy terms. Wm. Albrecht, Jr., Wausau, Wisconsin.

EIGHTY-ACRE FARM for sale cheap. Close to town and school. Fair buildings and about 3 acres cleared. Choice Clay loam soil. Considerable green hardwood timber which will go a long way toward paying for the farm. Price $25 per acre. Very easy terms. Address Box "J," Ladysmith, Wisconsin.

40 ACRES FOR SALE—Good buildings and soil; good road; 8 miles Milwaukee and 3 Menomonee Falls; $7,000 if taken at once, $4,000 cash, balance mortgage. Write Charles Paslrig, R. 17, Box 104, Menomonee Falls, Wisconsin.

NEARLY level 80, only ½ mile town; 20 acres field, balance good pasture, fenced; small set buildings; dandy place at right price, only $3,200, $500 down; nice dairy, chicken and truck farm. C. M. Melberg, Lewis, Polk Co., Wisconsin.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Conquering Incubator Troubles.

To the Editor:—There is one rule in most all incubator instruction books that an operator will do well to violate, and that is, where he is told that when everything is adjusted perfectly and running properly, to trust to the incubator.

Don't do it. Stay and watch, or drop in every spare minute to look 'round if you want "good luck," for every make of incubator has some peculiarity that tells in the operating, and it is only by close watching that the operator has a chance to learn how to bolster up the weak points, or get the most out of the strong ones.

I have heard a little story of a chicken king, because of his extra success in hatching and rearing chicks. One day a stranger came to him and offered a good bunch of cash if he would tell him the secret of his success in hatching.

The great king was just a plain farmer, and he smiled, a little sadly, for he hated to disappoint the man who had come to him.

"I'm sorry I can't take the cash, stranger, but I don't happen to have any secret. I don't do anything that you couldn't, and I don't know anything that you couldn't find out the same as I did—by working and watching.

"When I start my incubators, I consider that running them is my business, and I attend to them the same as I would to any other business. I just go and live with them and learn all I can about what they are doing."

The stranger was greatly disappointed, but it is possible that the great king's advice was worth the great bunch of cash, after all—for, most all the faults and troubles with incubators can be overcome by close watching—closest attention to the business of running them.

Neither should the operator forget that an important part of this business is to run the machine smoothly according to the instructions, so long as the instructions are sensible. There are three points in the instructions that should be followed out very closely. Follow the directions for ventilation.

Place the thermometer where the manufacturer says. Follow the instructions for temperature.

My last season's experience bears on the last two points. I was running three different makes of machines, each at a little different degree of temperature, one at 102, another at 103, and the third at 104. All gave good hatches.

The difference was mainly due to location of the thermometers, and did not indicate an actual difference in temperature of the eggs. I never trust to just one thermometer—usually having one to each tray, and an extra one or two to try occasionally.

The worst trouble I ever had with a machine was one of the kind that places the thermometer directly on the eggs. The difficulty arrives when the chicks commence to hatch. They always knocked the thermometer over and from then on I was never certain whether the latter part of the hatch was being cooked or frozen.

My main source of anxiety was the regulator, which responded more readily to moist heat than to dry. The result was that the ventilator was thrown wide open, and it let out the moisture and heat that meant life to the hatching chicks, and in rushed the cold air that was sure to kill them speedily.

My greatest difficulty was that I was without a thermometer as well as a dependable regulator. I took the little chicks already hatched as a guide to the temperature in place of the thermometer they had displaced. I used the ones that were well dried and resting quietly on the top of the trays well toward the back as a guide. Chicks in the nursery drawer would not have answered my purpose, as I might have waited until those below were too hot or cold, and the chicks just hatching would have died in the shell from one or the other extremes. I watched the chicks that were quietly resting on the trays, and when they commenced to pant badly and yell very loudly, I turned my lamp flame a little lower. I needed no further evidence to tell me that the egg chamber was getting too hot.

When I saw that the chicks were long in drying off, and when they started their hover song, I knew that it was getting too cold, and then turned the lamp a little higher.

I had a most trying experience, but by "living" with my machine during the hatch, I snatched a partial victory when failure had seemed certain.

The second time I operated that incubator I had another thermometer suspended where the chickens could not displace it, and by keeping a record of the variation between the two thermometers during the hatch, I was able to get along nicely when the chicks commenced to hatch since my records were a safe guide as to the proper temperature at which to keep the upper thermometer. Thus I was successful in overcoming troubles.

Ayrshire Advanced Registry Records

To the Editor:—The summary of the Ayrshire Advanced Registry Records for the quarter ending March 15, 1917, have just been announced.

For the quarter 102 animals of all classes qualified as against 114 in the previous quarter. The results show a gratifying increase both in milk and butter fat production. The 102 total entries averaged 10,587 pounds of milk, 420.87 pounds butter fat, test 3.98 per cent, an average increase of 742 pounds milk and 20.44 pounds butter fat over the average of the previous quarter.

Herewith is appended a summarized statement of the entries by classes:

SUMMARY ADVANCED REGISTRY RECORDS.
Recorded December 15 to March 15, 1917.

	Lbs. milk	Lbs. fat	Per cent test
39 entries, mature class	12,429	484.85	3.91
12 entries, senior four-year-old class	10,576	417.29	3.94
4 entries, junior four-year-old class	12,059	489.14	4.06
11 entries, senior three-year-old class	10,084	423.81	4.20
8 entries, junior three-year-old class	9,753	391.05	4.01
13 entries, senior two-year-old class	8,202	342.36	4.18
15 entries, junior two-year-old class	8,295	320.98	3.87
Total, 102 entries av.	10,587	420.87	3.98

HOW I SAVE LITTLE CHICKS

Dear Sir: I used to lose about two-thirds of my chicks every year with bowel trouble, until I sent a 50c money order to the Hammer Remedy Co., P-1, Des Moines, Iowa, Box 502 (formerly of Lamoni, Iowa) for a box of Inomal Little Chick Remedy (100 tablets) and since using it haven't lost a chick. Mrs. R. Clements, Neenah, Wis.—Adv.

Send two names to The Wight Co., 48 Main, Lamoni, Iowa, and they will send you enough Iowite Remedy, absolutely free, to save 40 chicks from White Diarrhea.—Adv

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production

The demand for farm labor in Canada is so great that as an inducement to secure at once the necessary help required, Canada will **give one hundred and sixty acres of land free as a homestead** and allow the farm laborer, who files on land, to apply the time he is working for other farmers as residence duties the same as if he had lived on the land he had applied for. This offer made only to men working on Canadian farms for at least 6 months during 1917, thus reducing the necessity of actual residence to 2 years instead of 3 years, as under usual conditions. This appeal for farm help is in no way connected with enlistment for military service, but solely to secure farm laborers to increase agricultural output. A wonderful opportunity to earn good wages while securing a farm. Canadian Government will pay all fare over one-cent per mile from St. Paul and Duluth to Canadian destination. Information as to low railway rates, etc., may be had on application to

GEORGE A. HALL

Ground Cherries.

To the Editor:—Last year a certain lady asked about ground cherries. I overlooked it at the time, but the other day in looking through the old papers I came across it. As a new spring is on the way I thought I would give my ideas of ground cherries.

In March or April (the sooner the better, as ground cherries are slow to germinate) take a box and fill with rich soil and plant your seeds. Place the box in the sunlight and water freely. A small 5-cent package of seed is sufficient to give a person a start. About the fifth or sixth week they will begin to appear and as soon as danger from frost is over they may be transplanted in the garden.

Although ground cherries will grow most anywhere, I always prefer a south slope, as they ripen sooner. Be it remembered, right here, that ground cherries are biennial and will come up by themselves the second year, so if you plant them in some permanent place you will have them the second year also.

They do not require much work. They should be planted like tomatoes and the weeds kept down. They are fast growers when once started and soon the plants will be covered with little berries. When ripe they are yellow.

We always eat the early cherries for sauces, pies, and also sell lots of them at 10 cents a quart. Late in the fall I can them. They should be gathered before a frost and put in some warm room and then they may be canned at leisure.

There are many ways of canning them, but I prefer the following method. Take one and one-half cups of water to every quart of cherries. Put the sugar (the amount depending on how sweet you want the cherries) into the water and let it come to a boil, then put the cherries in and two or three small pieces of lemon and let all boil a few minutes. Be careful not to let it boil too long. While boiling hot put in fruit jars and seal. Some like to can ground cherries with oranges or pineapples and still others mix them with sweet apples, half and half. In that case the lemon is left out. Another nice way is to put one teaspoonful of vanilla in the cherries provided you have not mixed any other fruit with them. This will give them a delicate flavor.

No matter how you fix them remember that ground cherries contain lots of acid and, therefore, everything must be clean, hot, and rubbers and covers must be new, or you might wake up some morning to find your preserves on the ceiling of the cellar. You would be in the same fix as one of my neighbors who came over one day and told me that during the night she dreamed of a German submarine battering the sides of an American ship. In the morning when she went down in the cellar to get some cream for breakfast she found eight quarts of ground cherries all stuck tight to the ceiling. You can imagine the rest—the cleaning and the scrubbing. She claims that she hasn't found two of her jar covers to this day. I wouldn't be a bit surprised if they landed in the Atlantic ocean.

I have had lots of experience canning vegetables and fruit and would be more than glad to give my advice to anyone who will write to our department for what they want. N. N.

Woman Serves Uncle Sam Thirteen Years.

There are 264 women rural mail carriers in the United States, but Uncle Sam has made a new ruling that no more women shall be employed in the service. This is quite right, says Mrs. Hettie Rankin, of Bates City, Mo., because riding a mail route is too hard for a woman. And Mrs. Rankin knows, for she has traveled a twenty-five-mile route for thirteen years.

Mrs. Rankin entered the service not because she was looking for an easy job, but, according to her own statement, because she had loved ones dependent upon her, and steady work and sure pay were absolutely necessary. She was used to hard work, having made her own living from the time she was thirteen years old, so she was not in the least dismayed at the prospect of serving eighty-four boxes every day. Faithfully she has performed her work. In thirteen years' service she has only twice missed making her route, once when the bridges were washed away by a storm and once again when snow so blockaded the roads that it was impossible to get through. She estimates that she has traveled 103,200 miles and she handles an average of 7,284 pieces of mail a month. Moreover, Mrs. Rankin uses a buggy and two horses, and for years she cared for her horses herself.

With all the hard work, however, Mrs. Rankin is satisfied and happy. Before she took up the work she

Mrs. Hettie Rankin, who has carried mail over a twenty-five-mile rural route for thirteen years.

nursed for $1.50 a week, and the $33 a month at which she started her new work seemed like a fortune. Now she is making $100 a month and has an annual vacation of fifteen days on pay.

"But," says Mrs. Rankin, "any woman who has twenty acres of land stocked with cows, hogs and chickens could make that much, and have more time to herself." Mrs. Rankin has made a success, but she lays it all to the fact that she has practiced economy and stuck to business, and, according to her views, the independent life of the woman who earns her own living on a few acres of ground is more desirable. It is determination to stick to business that wins, no matter what the business is.

Cauliflower Pickles.

To the Editor:—Someone asked for a recipe for cauliflower pickles and sweet pickles and I am sending you these as well as a recipe for dill pickles.

For the cauliflower pickles take equal parts of small onions, cauliflower and small cucumbers that have been in salt water three or four days. Clean them all thoroughly and put in weak salt water overnight. In the morning put them on the stove in clean water and boil four minutes. Drain off this water, cover with vinegar. Use one pint of sugar to a gallon of vinegar. Drop in a few small red peppers and, if desired, use a little mustard. Let boil up well before pouring over the pickles.

For sweet pickles put your pickles in a stone jar, pour over them a brine that will carry an egg, cover with grape leaves and let stand three or four days. Then take them out of the brine and soak overnight. Boil vinegar, one pint of sugar to a half gallon of vinegar, or more if you like them very sweet. Brown sugar is best. Heat the pickles, but do not boil them. Can hot. They will keep for years.

Dill pickles are made by putting in a stone jar a layer of pickles, say a gallon or so, then dill and grape leaves. Continue in this way until the jar is full. Make a brine, using a pint of salt to three gallons of pickles. Clean rain water is best for this brine. Put a weight over the pickles and set away for three weeks. These may be put in vinegar also.

Mrs. Augusta Leber.

Hard White Soap.

To the Editor:—One of the readers asked how to make hard white soap, and I am glad to tell her how I make it. To every five pounds of all kinds of drippings add one can of lye and one gallon of rain water. Let this boil slowly for three hours. Then add more water and as much salt as you have used lye. Let simmer and when the salt is all dissolved remove from the fire. Add two pails of water and let it stand until the next morning, then cut out in bars. If the soap is not clean, boil it over with an equal amount of water, one can of lye and the same amount of salt. After this is done the soap will be very nice.

Mrs. F. K.

Varnished Linoleum.

To the Editor:—I have been wanting to varnish my inlaid linoleum for some time, as I find it hard to clean, because the dirt seems to work into it. Someone has told me never to varnish inlaid linoleum, as the oil in the varnish separates the small inlaid pieces. I would like to hear from some of the readers who have had experience.

Reader.

Canned Hominy.

To the Editor:—I have had good luck canning hominy and I will give you my recipe for the lady who was asking about this. I prepare the hominy in the usual way, cook it until it is done and then seal it hot just the same as fruit. It keeps nicely and takes the place of potatoes when they are scarce. Mrs. J. M. Thompson.

Recipes.

Baked Lima Beans.—One pound of Lima beans, one-fourth pound of bacon, two tablespoonfuls of molasses, one tablespoonful of salt, one-fourth teaspoonful of pepper. Wash and soak the beans overnight. In the morning put them on in plenty of water and boil until tender; then drain and put in a baking dish with salt, pepper, molasses, and bacon which has been cut into thin strips and laid over the top; add enough water to come to the top of the beans. Bake in a moderate oven for from thirty to forty minutes, or until they are brown.

Raisin Pie.—One cupful of seeded raisins, one cupful of water, two tablespoonfuls of cornstarch, four tablespoonfuls of sugar, one-half teaspoonful of salt. Wash the raisins, add cold water, bring slowly to a boil, add the sugar, salt and the cornstarch, which has been mixed with a little cold water; boil for three minutes; pour into a pie tin, lined with crust, while hot, cover with crust and brush the top with cold milk.

Beef Liver With Onions.—One and one-half pounds of beef liver, six onions, salt and pepper, bacon fat. Slice the liver thin. Remove the skin and veins from the liver, then dust with flour, salt and pepper. Slice the onions thin and fry till soft in the bacon fat. Remove the onions and fry the liver rapidly in the fat. When brown on one side turn, put the onions on top and finish cooking. Remove to a hot platter, add a little water to the drippings in the pan to make a gravy, and pour it over the liver.

Apples Stuffed With Rice.—Six red apples, one cupful of rice cooked in milk, one-third cupful of sugar, one teaspoonful of cinnamon. Core the apples and fill the centers with the rice

mixed with the sugar and cinnamon. Put in a pan, add a little water and bake the apples as usual. Serve hot with cream.

Oatmeal Muffins.—One cupful of warm oatmeal, four tablespoonfuls of butter, one-fourth cupful of sugar, one cupful of flour, four teaspoonfuls of baking powder, one teaspoonful of salt, one egg beaten light, about one-half cupful of milk. Melt the butter in the oatmeal, sift together the sugar, flour, baking powder and salt; add the oatmeal, the egg and milk and mix together very thoroughly. Bake in a hot, well-buttered, iron muffin pan about twenty-five minutes.

Our Fashion Department.

All Patterns 10 Cents Each

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to WISCONSIN FARMER Madison, Wis.

Waist 1873-Skirt 1877—A fashionable gown. Waist pattern 1873 cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 1877 cut in 6 sizes: 22, 24, 26, 28, 30 and 32 inches waist measure. It will require 8⅛ yards of 36-inch material to make this costume for a medium size. Two separate patterns, 10 cents for each pattern.

2048—Ladies' camisole. Pattern is cut in 7 sizes: 34 36, 38, 40 42, 44 and 46 inches bust measure. It requires 1⅜ yards of 36-inch material for a 38-inch size.

Sam's Last Visit to a Melon Patch.

Dear Young Folks:—I would like to join your circle because I like to read your letters and stories. I have written an original story and hope you will enjoy it.

It was a beautiful evening in August. The moon shone brightly. In the shadow of some trees lay two boys.

"The other boys sure are slow about coming," said Tom to Sam.

"Just listen a minute. I declare I believe I hear them coming now," said Sam. And, sure enough, he did. It was not long until two other boys appeared.

"Seemed to me like you never would come," said Tom. There was a high board fence between the boys and a fine melon patch.

"Now we are all here and let's go," said Tom, and at once three of the boys started, but Sam hesitated. Finally, through the efforts of the other boys coaxing him he was persuaded to go. They had no difficulty in getting over the fence.

They were laughing and eating melons to their hearts' content when all at once the owner of the patch said, "Sic 'em, Rex, sic 'em." And a large dog came running toward the boys, showing his teeth. Such a time as they had getting over the fence. All the boys got over safely except Sam. The dog was right after him and he couldn't get over. At last he got to the top of the fence, but he caught the leg of his trousers on a nail and down he slipped to the ground again, tearing his trousers. But that wasn't the worst of it. The dog was still there and he kept pouncing on Sam until he was worn out. Then the owner saw that Sam was a neighbor boy and he called his dog off and let Sam go.

Such a time as the boys had talking and laughing about their adventure the next day. But Sam took it all seriously and made up his mind that would be his last visit to a melon patch.

—Lillian.

Has Fun With Don and Topsy.

Dear Young Folks:—I like to read your letters fine. I am a boy ten years old and I am in the sixth grade. I have three brothers and one sister. I have a pet dog and pony and I have lots of fun with them. The dog's name is Don and the pony's name is Topsy.

We had a week's vacation and my brother and I killed twenty-eight rabbits.

I did have a pet pig, but sold it and got $10 for it. I put the money in the bank. I am going to get two settings of turkey eggs and mamma is going to raise them.

We have Sunday school, grange and parent-teachers' association at our school. The parent-teachers' association is going to have a big program in a little while.

I will tell Blue Eyes how to play "I spy." A boy or girl takes a spool and while the rest hide their faces he or she hides the spool. The one who finds the spool first says "I spy." Wait until all the rest find it and then the one who saw it first hides it the next time.

—Cecil.

Boots Plays Hide-and-Seek.

Dear Young Folks:—I am a little girl seven years old. We had lots of snow this winter and I coasted a great deal of the time. Some nights when the moon was bright my mother went out with me and we surely had fun.

I have a dog named Boots. There was one lonesome little bird that wintered here and Boots and birdie played hide-and-seek and both seemed to enjoy it.

—Helen.

International Sunday School Lesson.

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for April 8, 1917.

Jesus Raised Lazarus From the Dead—Easter Lesson.

LESSON TEXT—John 11:17-27, 43, 44. (Read 17 to 44.)

GOLDEN TEXT—Jesus said unto her, I am the resurrection, and the life.—John 11:25.

This lesson occurred about two months before the crucifixion, Jesus being in Bethabara at the time of this call (See John 10:40; 1:28). There are four recorded cases of resurrection from the dead: Jairus' daughter (Matt. 9), the son of the widow of Nain (Luke 7), Lazarus, and also Jesus after his crucifixion (John 20).

I. The Lesson of Unbelief. Bethany, the home of Lazarus, is on the southeastern slop of Mt. Olivet, two miles from Jerusalem. Christ and his disciples were on the east side of the Jordan, having been driven there by the hostility of the Jews (John 10:31). He purposely delays his stay in that place that this event might give an opportunity for the manifestation of his wonder-working power. This delay was in face of his supernatural knowledge that Lazarus' sickness had been fatal, for he said plainly to his disciples, "Lazarus is dead." Philosophers have often called death a sleep, but always one from which there was no awakening; hence the skepticism of these sisters is not surprising. (1) They limited the power of Jesus to his person—"If thou hadst been here." (2) They also limited his power to a certain place, 'If thou hadst been here" (v. 21).

II. The Lesson of Pain. The suffering of these sisters produced sacrifice and self-devotion. Suffering brings blessing to others. It is also a means of self-culture. Suffering drives us to the Christ, and reveals to us the unrealized side of Christ's character (v. 25). Jesus is often never more kind than when he seems to be least kind. In the midst of her skepticism and pain Jesus gave Martha a new and glorious thought about the resurrection. "I am the resurrection and the life." If we desire that, all we have to do is to get Jesus himself (I John 5:12). Resurrection has to do with the body, and life has to do with the spirit (John 17:3.) All will ultimately experience resurrection, but only those who believe on him receive life (John 3:36). There is a resurrection of life and there is a resurrection of damnation. (John 5:29). Martha answered "Yea, Lord, I believe that thou art the Christ, the Son of God." It is all-important that we should really believe that (John 20:31; I John 5:1-5).

III. The Lesson of Love. Love always manifests itself in deeds. Martha secretly and quickly arose and left the wailing friends to go and meet the waiting Master. "The Master is come." He still comes, and calls to us, and, if, like Martha, we spring up gladly to meet him, he will fill our lives with blessing and joy. Jesus came to these sisters individually (vv. 21, 28). He had entered the danger zone in order to be there (v. 8), and it was Thomas, the doubter, who wanted to accompany him (v. 16). "Jesus wept," not with the wailing of professional mourners, but with the silent, grief-stricken sister.

IV. The Lesson of Power. Jesus had let natural causes work to their fullest extent. Coming to the tomb, Jesus said (v. 39), "Take ye away the stone." It was four days after the death of Lazarus before he came forth. Jesus was soon to die and rise in three days after his entombment. The stone had to be removed from the tomb of Lazarus; it rolled itself away from the tomb of Christ. The restrictions which Christ placed upon his exercise of power, viz., that he allowed Lazarus to die, to be buried, and his body to reach the point of putrefaction, and not to come forth until Jesus himself, in his body, was present at the tomb, emphasizes the lesson of the restraint of power for the glory of God. Out of such extreme circumstances of seeming impossibility God manifested his glory (Rom. 8:28).

Browning has given us a wonderfully imaginative picture of his renewed life on earth:

And oft the man's soul springs into his face
As if he saw again and heard again
His sage that bade him rise,
And he did rise.

The effect of the miracle was twofold. Many who were present believed on Jesus, others did not.

Some went to the Pharisees to relate what they had seen, only to meet with rebuff.

The remainder of the chapter is occupied with the plotting of the Pharisees against Jesus, and from this grave there stretches the shadow of a cross upon the path of Jesus.

This miracle ranks next to Christ's own resurrection as a demonstration of immortality.

Are we on resurrection ground? Has the stone been rolled away?

The resurrection of Lazarus proves that our earthly existence is only temporary, that our real existence is eternal.

Beautiful Picture for You

Solve This Puzzle

Here are seven ponies in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, a beautiful panel picture, "The Popular Girl," printed in many colors. This is a wonderful picture. All you have to do is enclose four cents stamps in your letter to pay postage and cost of mailing. We will also send a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland pony.

Fine Pony Given Away

Remember the Pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in the great contest. In case of a tie a pony will be sent to each person so tied. Write me today.

THE PONY MAN Dept. 608 Des Moines, Iowa

Feeding Bran or Middlings Means Paying Twice Too Much for Protein

At present prices, protein costs per pound as follows: In cotton seed meal 6c; in bran 15c; in wheat middlings 13c; in oats 24c; in corn 26c. Cotton seed meal supplies protein at less than half the cost of other feeds. It makes beef, mutton and butter fat at a profit when grain feeds show a loss. (23)

Feed Cotton Seed Meal Manure Worth $38 Per Ton

Cotton seed meal is a fertilizer—rich in Nitrogen, Phosphoric Acid and Potash. According to "Henry's Feeds and Feeding" 37% meal analyzes: Nitrogen 7.06%. Phosphoric Acid 2.67% Potash 1.81%. At present fertilizer prices it is worth $48 per ton. Feed the meal and you get 80% of the fertilizing value in the manure. The manure, by analysis, is worth $38 today. Even at average fertilizer prices the manure is worth $25 as compared with $7 from oat-fed stock and $6 from stock fed on corn. Write our nearest office for our FREE book on feeding.

Protein in Corn, - - 26c lb.
" " Bran, - - 15c lb.

Success in Raising Young Stuff.

Attention Which Is Given the Calf in the First Year of Its Life Is a Matter of Greatest Importance.

As THE main value of a dairy cow lies in her ability to raise calves and produce milk, the attention that is given the calf during the first year of its life is necessarily of importance. The more calves one can bring to cowhood without loss through death or stunting through early diseases the bigger the profits from the dairy establishment. Hardly a farm, however, can show a clean record in raising calves. There is always a certain percentage of the calves that is seriously hindered in their development through sickness of some kind or other which quite frequently leads to death. On the Milford Meadow Stock Farm, where Holsteins are in favor, an exceptionally good record has been maintained during the last two years in the rearing of young stuff. Out of 119 calves born on the place since September, 1915, only one calf has died from sickness of any kind. More than that, in all that time not one calf has had even the slightest touch of bowel trouble. There have been no cases of scours or even a trace of temperature in any of the animals during all this time. The one calf that was lost died when it was six days old from pneumonia. That is the only case in two years.

The Milford Meadow Stock Farm, located a few miles out of Lake Mills, was started by Dr. Henry B. Faville in 1910. The systematic plan of breeding that was being carried on with Holstein cattle was threatened when the owner suddenly died last year. However, Emmonds Blaine, of Chicago, has purchased the 600-acre farm and announced that the work so splendidly planned will be carried on along the same lines. The former manager, Mr. Harry Faville, has been retained and Holstein breeders in general are pleased with the favorable turn of events. Mr. Blaine has the genuine enthusiasm that goes with success and in Harry Faville he has the type of man who can be depended upon to do things right.

There is now a herd of 150 head of young stuff on the place ranging from a day to two years of age. The success in the care of these animals cannot be attributed wholly to luck. There is considerable good management behind it. The time to start the care of the calf, according to Mr. Faville, is while it is still in the cow. At the Milford farms the cows are usually dry for two months before calving and all possible care is taken from that time on to feed the cow in such a way that her physical condition will be the best at calving time. She is fed on alfalfa hay, clover and silage, together with oil meal, bran and crushed oats as a conditioning ration. The calf is not allowed to stay with the mother longer than twelve hours. The reason for this is that the calf will do better and the cow likewise will feel the loss of the calf less when separation takes place early. The calf is fed on whole milk during the first two weeks at the rate of about three pounds three times a day. After two weeks the time of feeding is changed to two times a day and the ration increased up to twelve pounds until the calf is six weeks old. From the very beginning the calf has access to choice clover and alfalaf hay and a mixture of six parts of bran, six of hominy, six of crushed oats and one-half part oil meal. It is surprising the way the calf will begin to eat at the age of two to six weeks. The more hay and grain the calf eats the less chance there is for stomach trouble, especially when the change from whole milk is made. At Milford Farms the change is made at the age of six weeks, consuming in all two weeks. The whole milk is gradually displaced until finally the calf receives a full ration of separated milk. This period of feeding is the time where the greatest danger to the calf's health presents itself. Variations in temperature, irregularity in feeding and carelessness in measuring the amounts fed are the greatest factors to bring about stomach troubles. All these things are avoided at the Milford Farms by careful and close attention to details. The temperature of the milk fed to the calf need not necessarily be 90 or 100 degrees, but it must be the same temperature from day to day. The milk must reach the calf as soon as possible after milking in the case of whole milk, or after separating in case of skim milk. There is no necessity of using a thermometer in order to obtain the right temperature if one can be sure that care is exercised in this particular direction. The calves are fed skim milk until they are nine months old, the ration being increased to a maximum of twenty pounds per day when they are six to seven months old. By that time they have learned to eat hay, grain and silage and the change is not noticed so much.

PERMANENT FEEDING RACK CONSTRUCTED OF IRON PIPE, WITH CONCRETE FLOOR SIXTEEN FEET WIDE.

Beginning in May and until late in the fall all the young stuff over three months of age are kept in open-air sheds which are at the far end of two lots of one and one-half acres each. These lots have at the end nearest the barn a feeding rack constructed of iron pipe. The construction of these racks is the result of considerable thought on the part of Mr. Faville. They are permanent stanchions that will last for years without needing any attention or repairs. A concrete floor extends back for sixteen feet, giving the calves a dry place in all sorts of weather. Forty calves are kept in each lot, the older stuff being separated as much as possible from the younger stock. The sheds open out towards the east. Thus the calves get the morning sun and because the sheds are at the other end of the lot they must take exercise in order to obtain their feed.

In winter all the stock is kept in the barns, but they are turned out, depending upon the weather, from fifteen minutes to three hours each day. The barns are well ventilated on the King principle of ventilation. Every precaution is taken for its sanitation. The pails from which the calves receive their milk are daily washed and scalded with the same care that the milk pails receive. The calf barn is sixteen by seventy feet, built with two wings, with each calf pen so constructed that it can be thoroughly disinfected and cleaned out without moving any of the other calves out of the barn. A separate section for the cows about to calve which forms the center of the cow barn is similarly con- two wings 38x50 and 30x120 feet where the young stock and the cows are kept.

The entire herd of eighty cows now in milk or about to freshen is in excellent condition and have besides their breed points and milking ability the point of good ancestry and individuality behind them.

The sires at the head of the herd play an important part in the production of good healthy calves. The senior herd sire is Canary Homestead Oak De Kol, who traces back to Jesse Fobes Bessie Homestead, with a seven-day record of 34.96 pounds of butter. She is by Fobes Tritomia Mutual De Kol and a granddaughter of Homestead De Kol. The junior herd sire is Canary Fobes Bessie Homestead, who is a grandson of Homestead Jr. De Kol on the dam's side and of Jesse Fobes Bessie Homestead on the sire's side. Her breeding was just explained in

EAGLE MFG. CO.
740 Winnebago St., APPLETON, WIS.

connection with the senior herd sire. In order to follow out this system of line breeding to a better advantage a new bull is soon to be added who is Sir Pietertje Ormsby Mercedes 36th by Sir Pietertje Ormsby Mercedes, who is out of Aggie Wayne Peep. Sir Pietertje Ormsby Mercedes is the herd sire of E. C. Schroeder's herd of Minnesota and is out of Pietertje Maid Ormsby. This cow displaces Jesse Fobes Bessie Homestead, who had a record of 34.96 pounds of butter in seven days. Sir Pietertje Ormsby Again was sired by the bull Jack Mercedes, whose sire was Mercedes Mechtilde Pietertje. His dam was Mercedes Julips Pietertje, the dam of the sire of King Segis, one of the most noted bulls of the Holstein breed who has sired some of the record cows of the world. There are about twenty-five females of this line of breeding on the Milford Meadows Stock Farm that are thus very closely related to the cows that have records of forty to fifty pounds of butter per week. Great results can, therefore, be expected when this breeding is carried farther during the coming year.

Among the cows that have been doing exceptionally well on the Milford Farms is Ormsby De Kol Tiffany, granddaughter of Lillith Pauline De Kol Count and Duchess Ormsby De Kol Butter King. She has a record of 34.55 pounds of butter in seven days.

Another cow that has done quite well is Monona Josephine, who is a granddaughter of Dutchland Sir Pontiac Rag Apple, tracing back to Hengerveld De Kol.

Marianetta Butter Girl has a record of 2,958 pounds of butter in seven days as a nine year old. She had had no care previously in her life, but breeding stood her in good stead. Her sire is Pontiac Butter Boy. She is a granddaughter of Marianetta Weg.

Johanna Fayne Homestead, a daughter of Homestead Junior De Kol, has lately finished a record of 29.17 pounds of butter in seven days. She is out of the cow Johanna Fayne Rue, who has a record of 31.31 pounds of butter in seven days.

There are in the herd from these cows two daughters of Johanna Fayne Homestead, two daughters of August Wit Mercedes, three daughters of Monona Josephine and one daughter of Marianetta Butter Girl.

With this system of line breeding the care of the calves becomes doubly essential, as the value of each calf is greatly increased as the sires and dams become more valuable. But on any farm if the calf is worth raising it is worth raising well and many a calf might have been greatly helped or even saved during the first weeks and months of its life by attention at the proper time.

CALVES TURNED OUT EVERY WINTER DAY—LENGTH OF TIME DEPENDING UPON CONDITION OF WEATHER.

Cow-Testing Reports.

Winnebago County Cow-Testing Association.

To the Editor:—A report for the month ending March 2d, shows the second largest list of forty-five-pound cows of any month in the past year of the association's work. The forty-five pound list is as follows:

A. R. House, Official Tester.
L. E. Bronson, Secretary.

Columbus Association.

To the Editor:—There were forty-four, forty-pound cows in our association this month. Hutchinson Brothers & Burbach got over 700 pounds of milk daily from eighteen cows. R. F. Kalbhorst fed a better grain ration this month and increased milk 2,774 pounds. He increased his profit 24.63, notwithstanding the fact that he milked one cow less. E. R. Kastin salted his cows the day before testing last month. The average test went down from 3.91 to 3.24. This month it went back to 3.81 again. Henry Dolan had the best herd average of 38.6 pounds. Sixteen unprofitable cows have been sold. The following is the forty-five-pound list for month ending March 12th:

Owner, name and breed	Age	When fresh	Pounds milk	Pounds of fat	Pounds B. fat
Henry Westphal

Natco Imperishable Silo
"The Silo that Lasts for Generations"

Built of glazed hollow tile impervious to air and moisture, and frost-resisting. It's the silo that needs no repairs—no painting—has no hoops to tighten. Strongly reinforced and *fully guaranteed*. Simple in design; only two shapes of tile used; any mason can erect a Natco. Will increase the value of your farm.

Send for our Silo catalog and our book, "Natco on the Farm,"—both free. Tell us what you intend to build. We have valuable building plans —free. Write today.

How to Erect A Wood Tire Silo

Bolt tire to concrete base. Set the 2x4 spacers on lower tire and toe-nail. Place second tire on spacers and toe-nail. Repeat until framework is done. Nail on outer covering of spruce—then inner lining of California redwood.

You then have a **storm-proof, frost-proof, mould-proof** silo without hoops or guy wires—one that will not swell, shrink or decay—a different, *patented* silo that gives you the best possible service and at a reasonable cost. Write for our FREE silo folder and learn more about its construction and advantages.

Win Laundry Prize.

The River Falls Coöperative Laundry has been awarded the special $300 prize offered by former Dean W. A. Henry for the community which would successfully operate for one year a town and country laundry. This offer was made at the fourth Wisconsin Country Life Conference. Two members of the college of agriculture staff, Mr. C. J. Galpin, secretary of the Wisconsin Country Life Conference, and T. H. Farrington, head of the dairy school, had visited the laundry. The other members chosen to decide the prize were Miss A. L. Marlott, director of home economics at the college of agriculture; D. O. Mahoney, Viroqua, president of the Wisconsin Society of Equity, and A. L. King, Omro, master of the state ring. The River Falls Coöperative Laundry run in connection with the River Falls Coöperative Creamery has been discussed previously at some length in The Wisconsin Farmer. This company has a capital stock of $25,220 divided among 243 stockholders on the coöperative plan. Eighty-six of these stockholders reside on farms and thirty-seven are retired farmers living in River Falls. The laundry has an equipment of $3,229 and turned out $8,755 worth of work in 1916 for 1,090 patrons. The net record in 1916 was $493 or 9 per cent on the capital stock.

Common Sense Must Govern in Handling "Help."

To the Editor:—Observing in The Wisconsin Farmer of recent issue an article, "Married or Single, Which?" and noticing an extract from a letter of some person who had written you, complaining somewhat of his "hired man," the writer saying his hired man or men wanted to "eat at the table with them" or make use of the bathroom that belonged to the family and wanted to go out to entertainments with the family, would say that the writer has overlooked entirely the practice of "democracy."

One man owns a piece of ground and another man furnishes the labor that cultivates the ground. Why, therefore, should one of them assume an aristocratic air and the other be relegated to the place of a "menial?"

I call to mind the practice of one of the best farms in Iowa in 1857 where the men employed helped the owner cultivate the land and ate at the table with the owner of this magnificent farm and his family and enjoyed the same bath pool, namely, the "old swimming hole" that everyone did.

The young men we then employed worked without limitation of hours, and I have known them to get up and arouse the boys at midnight to go and cover a half-completed wheat stack with hay, to protect it from the threatening rain. Our relations were that of man and man, democracy in its simplicity and purity, without any artificial notions of superiority or foolish ideas of exclusiveness between those who were engaged jointly in cultivating a piece of ground and producing crops thereon.

Some of the present-day trouble between employer and employe is the result of a false notion of superiority of the man who owns the ground held under human laws or the tools, the invention of human ingenuity, and the man who furnishes the labor to cultivate the one or operate the other.

Let common sense rule a democracy and determine the practice and the owner of acres will not have occasion to complain of his labor service, whether performed by "married or single men." H. B. Kelly.

Culverts That Last

CULVERTS that will stand the wear of years without rusting out are of utmost importance in ditching, drainage and highway building. The Armco iron corrugated culverts, being constructed of iron that is practically pure have stood the test for more than 90 years. Why the Armco culverts resist rust and give long and economical service is explained in literature which will be sent free to every Wisconsin farmer who is interested. They represent enduring value for the taxpayers' money. Read the advertisement on page 2 and write the Armco Iron Culvert and Flume Manufacturers' Association, Cincinnati, Ohio for full information. Mention that you saw their advertisement in The Wisconsin Farmer.—Adv.

Many Prohibitionists Favor Compensation

AMONG the strongest advocates of *Compensation* for brewing interests are many of the leading prohibition workers themselves.

Many leaders in the "dry" movement have publicly urged payment for the property destroyed or damaged by legislation as the quickest, surest and fairest way to secure their aims.

Ministers, writers, lecturers and workers in the cause of prohibition have urged *Compensation.* Prohibition papers and journals have advocated it. A large part of the rank and file among the "drys" favor it.

Hundreds of quotations could be given but here is one of unusual interest: D. Clarence Gibbony, president of the Law and Order League of Philadelphia in the *Outlook*, July 4, 1914, says:

> *"The only effective plan, it seems to me, by which we can permanently get rid of the liquor business is for (Pennsylvania) to pass a Prohibition amendment to the Constitution—appropriate a sum of money sufficiently large to meet the requirements—provide for the appointment of some sort of commission with authority to appraise all liquor establishments at their actual value, and in some such manner compensate for some part of the actual cash loss following the dissolution of the partnership (with the Government), thereby enabling them to engage in some other business. I cannot understand how any good citizen, if he comprehends the facts, can approve of a partnership which gives both partners part of the profits, but charges one of the partners with all of the losses at the time of dissolution. This is neither just nor equitable. So, therefore, it cannot be the right way out."*

The proposed Wisconsin Compensation Bill does not provide a Commission; it merely gives the right to sue for *Compensation* and have the case decided by a jury. The community pays the loss to its own industry.

If you believe in fairness, justice and equal rights for all, you *must believe in Compensation.*

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Lefebures' Belgians.

H. LEFEBURE & SONS, of Fairfax, Iowa, report very active sales in Belgian horses, having recently sold to Chas. Louis, Osage, Iowa, Bruno, a blocky blue roan yearling stallion; to A. B. Friesen, of Mountain Lake, Minn., a ton five-year-old imported Belgian stallion; to J. Ones & Co., of Tolley, N. D., a four-year-old chestnut stallion; to Holdgrafer, of Haverhill, Iowa, Neron de Kerkon an eight-year-old ton imported sorrel stallion; to A. Riddell, of Spokane, Wash., three head of stallions, a four-year-old ton sorrel, a three-year old brown and a two-year-old black. To Conrad Richards, of Brownsville, Minn., a good six-year-old imported sorrel stallion; to Robert Moorhead & Co., of Wabasso, Minn., Royal Jent, a ton bay four year old, and to J. C. Forsythe, of Ipava, Ill., a black four-year-old mare in foal. We still have a barn full of imported and American Belgian stallions of breeding age and with the quality and size desired and can also spare another 20 Belgian mares and fillies. H. Lefebure & Sons are the proprietors of undoubtedly the largest Belgian horse breeding establishment on earth. It consists of six entire farms, all adjoining, each containing a complete set of farm buildings and covering an area of 1,000 acres of Iowa's best soil. Their herd, contains several champion and reserve champion stallions and mares and for the past 25 years they have been winning a large portion of the prizes at the leading American shows. They were decorated the premier champion exhibitor of Belgians at the St. Louis World's Fair and again at the Panama-Pacific World's Fair in 1915. This stud includes about 150 head of the most highly bred stallions and mares to be found anywhere, many of which trace to Indigene du Fosteau; Reve d'Or; Brind d'Or, Mont d'Or, Ideal du Fosteau, and Nickel, all of which are among the best sires of the Belgian breed of horses. The Lefebures are pioneers in this business; the 29 years of importing and breeding Belgians have witnessed the building up of a firm that cannot be excelled for positive guarantee and upright dealings. At the present time they have on hand over 50 mares to foal this spring with which they will assist other careful breeders in showing the world that America can be supreme in draft horse production. Their 25 colts foaled in 1915, weighing from 1,100 to 1,300 pounds, their 40 head of one and two-year-old stallions weighing from 1,600 to 2,000 pounds and their selection of ton aged stallions are ample proof of their worthiness to the distinctions won by their exhibit at the big shows. Anyone wanting a stallion of merit, or one or more teams or mares in foal cannot do better than visit their farms and spend a day looking through the several large barns thereon. A revelation in American-bred Belgian horses. Their 1917 catalog can be had for the asking. Please mention this paper when writing them. See page 25.—Adv.

Durocs You'll Hear About.

AT the Madison Duroc Jersey sale, Clarence George, Evansville, Wis., entered two of the best gilts that were sold. This was the first time his Durocs had ever come before the public and many were surprised to know that there was a good herd at Evansville. We recently visited the George farm and found him with some good sows and litters. He has a couple of choice Valley G. sows and those posted will remember that Valley G. was a litter brother to the noted, Illustrator. These sows are raising good litters. Another one of the good ones traces back to the Iowa champion, Freed's Col. She has a nice litter of nine. A good fall sow is by Crimson Wonder, he by Crimson Lad. Mr. George has recently purchased some valuable sows, among them being a daughter of King Royal, he by Royal King and she is bred to King Orion—this should be a good litter. The herd boar is Golden Defender, a Defender-Golden Model 2d bred boar and one of the good boars of the state. He has just turned two years old. Besides the above boar, there will be a few litters by Taxpayer, he being by a son of old Defender and out of a Valley G. dam. Mr. George is a good caretaker and at the proper time he will offer you spring boars and gilts that have been well grown and cared for. He hasn't anything to sell at this time, but we want you to keep this herd in mind. He will book your order for a good spring boar to be shipped at three months of age. His advertisement appears on page 25 of this issue.—Adv.

W. T. Harris to Judge Durocs at Milwaukee.

AT THE meeting of the Duroc Jersey Breeders' Association held during "Swine Week" Mr. W. T. Harris, Morganfield, Ky., was recommended for judge of Duroc Jerseys at the Wisconsin State Fair, 1917, and Mr. Dillon to be retained as superintendent of swine at this fair. We are in receipt of a letter from Mr. Norgord, commissioner, advising that arrangements have been made with Mr. Harris to act as judge and Mr. Dillon has been retained as superintendent. We are sure that this will meet with approval from all the showmen, as Mr. Harris gave excellent satisfaction last year. No fair has a better or more competent superintendent of swine than Mr. Dillon and all swine exhibitors will be pleased to learn that his services are to be retained.—Adv.

Of Interest to Poland China Breeders.

L. P. MARTINY, Chippewa Falls, Wis., has a two-year-old boar that will make the showmen of the state sit up and take notice if he fits him for the fairs this fall. Mr. Martiny has kept this boar under cover since last summer and no one knew there was such a boar in the state. In asking Mr. Martiny why he did this we were advised that he wanted to see what his pigs looked like before he made much noise about him, but at this time his pigs are outstanding in every respect, so it's time to start the "fireworks." Many breeders of the state are of the opinion that Mr. Martiny has the medium type Poland Chinas, but they are wrong. It is true that he has had, but now he has a herd of big-type sows of the very best breeding. We will have more to say about his sow herd later—just now it is the herd boar. His name is Big Bone Wonder, farrowed March 3, 1915. Sire, Perfect Wonder by Big Wonder 2d by Big Wonder. All Poland men have heard of Fred Seivers' herd, of Iowa, considered the greatest herd in America. His herd is noted for its wonderful sows and they are of Big Wonder breeding, so this boar is of the same breeding as the Seivers sows. In the first place this boar is big, weighing right at 800 pounds. We have never seen a better head or ear on a big-type boar. He has an arched back and a spring of rib like a Hereford cow. We feel safe in saying he has an 11-inch bone and his feet and pastern could not be better. This is the best boar we ever saw on the Martiny farm and Mr. Martiny says he is the best boar he ever owned. To make a long story short, "he is some boar" and you had better order a boar or gilt to be shipped later.—Adv.

Some Good Chester White Boars.

NOW is the time to buy your fall boar. You no doubt will have a few sows to breed for fall litters, and the service will not hurt the boar. Then you will have a chance through the summer to grow him out to your own satisfaction. As a rule there is not the usual number of fall boars in the country this spring, for owing to the high price of feed the breeders did not carry many over. The East Side Stock Farm, H. A. Derenthal, manager, Wykoff, Minn., has a number of fall boars of different ages for sale at reasonable figures. He needs the room for the spring crop and for that reason the fall pigs are being priced below their value. They are sired by Ignatz, the junior champion at Minnesota in 1915, and Callaway's Kind, first at Minnesota and grand champion at La Crosse. These boars are well bred and excellent individuals. Mr. Derenthal is also booking orders for spring pigs to be shipped at three months of age. We can see no reason why hogs will not be high for another year and the man that buys early will profit by it. Write the above firm for particulars and please mention this publication.—Adv.

Low Prices on Furnaces.

YOUR home may be kept warm, pleasant and congenial by a Bovee's Pipeless Furnace, and the cost of installation is small. Twenty-one years' experience in manufacturing and installing furnaces have given the Bovee Furnace Works, 202 W. 8th St., Waterloo, Iowa, the knowledge and ability to provide you with an entirely satisfactory heating plant at manufacturers' prices. In addition to pipeless furnaces they manufacture central heating furnaces and regular piped furnaces. If you want any kind of a heating system, send to the company for their beautiful three-colored catalog, explaining the different Bovee systems. This catalog is free; write for it today.—Adv.

Proved Kerosene Engine.

THE time has come when you can put common kerosene oil into an engine tank, much like filling a lamp, and have the kerosene run the engine about as easily as it gives off light from an ordinary house lamp. "Today," said Ed H. Witte, president of the Witte Engine Works, 2717 Oakland Ave., Kansas City, Mo., "we sell four kerosene engines to every six gasoline engines. Within a few years a gasoline engine will be more unusual on the market than the kerosene engine is now. In our 30 years of engine building, we have aimed to keep in the forefront in our line. Our kerosene engine is no exception, in our record. I had it designed and proved out, and we have been selling liberal numbers of them—for years before any of the present-day, so-called kerosene engines came onto the market. Recently we put in a good deal of new, special factory equipment, which enables us to build kerosene engines to much better advantage. We are now pricing them lower than most gasoline engines. We sell direct to user, under a most binding five-year guarantee covering fuel consumption, as well as reliability of operation, and durability of construction. Doing the same work with engines of the same rated horse power, the Witte four-cycle kerosene engines require no more kerosene than other engines require of gasoline, and, as against two-cycle engines, the Witte four-cycle requires a third less fuel, and is more certain of continuous operation under full load." Anyone interested can, by writing Witte, at his address given above, get by return mail complete description and illustration of his engine together with comparisons of value of it, as against other types and styles of engines.—Adv.

Witte kerosene engine, burns kerosene, gasoline, distillate, naphtha, tops or any other like fuels, delivering practically the same horse power per gallon from each.

Wisconsin Farmer Brought Sales.

"The Wisconsin Farmer brought me many inquiries and many sales."—Charles S. Flesch, Mt. Ida, Wisconsin.

From Grades to Pure Breds.

MR. N. J. JACQUE, Port Washington, Wis., has had a very good herd of grade Holsteins for years, but recently decided to dispose of these and go into pure-bred cattle. He called at the Fred Pabst Farm, Oconomowoc, Wis., the other day and selected a young bull, Pontiac Korndyke Johanna Segis, sired by Korndyke Segis Johanna, whose two dams average over 38 pounds. The dam of this bull is a daughter of King Pontiac Champion, their senior herd sire. This heifer is out of Duchess Johanna of Delafield with a record of over 27 pounds, and her dam in turn has a record of over 29 pounds. Mr. Pabst expects to test the dam when she next freshens and has hopes she will do honor to her dam and grandam. Mr. Jacque was very particular as to individuality and the bull he selected was an animal with straight top line, plenty of substance and of masculine appearance. We believe he will not regret making this selection for his herd sire.—Adv.

Shekletons' Stallions.

FRANK P. SHEKLETON & SONS, well-known draft horse men, Lawler, Iowa, write as follows: "Our advertisement in your paper has produced for us this season more business than ever before. We are receiving many inquiries every day through it and we attribute many of our best sales to your paper. We have sold within the past ten days to John Breitbock, of Peosta, Iowa, a good black and a dark gray Percheron stallion to go on the stand this year. Herman Luther, of Nelson, Wis., selected one of our good two-year-old Percheron stallions, weighing nearly a ton. Richter Bros., of Red Wing, Minn., visited our barns and selected a very fine black Percheron stallion. To J. B. Timmermann, of Sibley, Iowa, we sold the black two-year-old Percheron stallion, Larry. This colt weighed 2,150 pounds the day he purchased him. Mr. Timmermann will use this colt on his herd of pure-bred mares. Holly M., a grandson of Pink goes to M. R. Hinckley, of Hoven, S. D. Mr. Hinckley has a large ranch and will use this colt on his own mares. Mr. Hinckley owns 100 head of high-grade Percheron mares and believes that this heavy, thick colt will make a fine cross on his light-boned mares. Theo. Rake, of Algona, Iowa, selected a dark gray three-year-old Percheron stallion weighing over a ton, and to Joe Husting, of Waucoma, Iowa, we sold a very fine two-year-old black Percheron stallion. Messrs. Cary & Days, of Mitchell, S. D., purchased a very find four-year-old Belgian stallion to put on their ranch. Andrew Ust of Elkton, S. D., selected a four-year-old Clyde stallion. While we have sold many fine stallions this winter we still have to offer some of our very best two-year-old Percherons. These colts are bred in the purple, and the man that is looking for a Percheron stallion at the right price should write and get prices of these colts. We still have our five-year-old imported Belgian stallion, Bizzarrie, weighing 2,300 pounds. This horse is an outstanding a good one in every respect, and should be doing service in some good stud this season. We have a number of stallions from six to ten years old that we have taken in on trades that we are offering at a sacrifice." See page 25 and write for prices, mentioning this paper.—Adv.

A Fast-Working Engine-Driven Sprayer.

HOW would you like to spray 10 rows of potatoes at a time? You can do it with this powerful engine-driven sprayer and maintain plenty of pressure—200 pounds or more. A four and one-half horse-power, air-cooled engine, furnishes ample power. Being detachable, it may also be used for running the grain binder and potato digger, likewise for sawing wood and other chores around the farm. Then, too, a few minutes' work with the wrench will convert this fast-working field sprayer into a practical orchard outfit. This is made possible by a special orchard attachment. This feature will be especially appreciated by those farmers who have fruit trees to spray, but whose orchards are not extensive enough to warrant the purchase of a power outfit for orchard use only. Every farmer should send for the free booklet of the Bateman Mfg. Co., Box 74B, Grenloch, N. J., which fully describes this labor-saving sprayer. It also tells of the profit earning potato planters and other garden and orchard machinery which this company manufactures. Write for the booklet today.—Adv.

Jenkins Buys Profitable Sultan.

WE have just been advised by Kiser Bros., Oregon, Wis., that they have just sold one of their herd bulls to W. C. Jenkins, the well-known Duroc Jersey man, of Bangor, Wis. The bull, Profitable Sultan, is a roan sired by White Rock, he by Whitehall Sultan. The dam, Oakland Profitable, was by Duke Marigold, he by Prime Minister. The seven top sires in this bull's pedigree were bred by Amos Cruickhsank. This bull is a proven sire, as the calves on the Kiser farm show and Mr. Jenkins was fortunate in getting such a good Short-horn bull.—Adv.

Exceptional Opportunity to Buy Sweet Clover, Alfalfa and Grass Seeds.

THE A. A. Berry Seed Co., of Clarinda, Iowa, announce that they have in stock considerable quantities of the finest grass seeds—particularly the common clovers, alfalfa and sweet clover. They will gladly send their new catalog and complete information in regard to grass seeds—also field, garden and flower seeds—to anyone requesting it. Address them at Clarinda, Iowa, Box 934, if interested.—Adv.

James Derivan Polands.

JAMES DERIVAN, of Fox Lake, Wis., is well known to the Poland China fraternity of this state. Just at this time he is offering fall boars and gilts—farrowed in August. They have been well cared for and have plenty

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

of size for their age and they are sired by two good boars. If you will write Mr. Derivan he will gladly describe what he has for sale and you will find the pigs just as represented.—Adv.

The Hog's Health.

IN Dr. Gilbert Hess' valuable book on the uses of dip and disinfectant on the farm, the following appears in relation to hogs: "Dr. Hess dip and disinfectant is a most valuable vermin and germ killer and should be freely used by all hog raisers about the hog houses as a general disinfectant. There is no animal more filthy, when confined, than a hog, and there is scarcely any place where disinfecting is more necessary than in a hog pen. A hog being small in size, it is much more practical to dip than the larger animals. Frequently dipping is certainly a very important thing to do, because it prevents disease and keeps hogs in a healthy, growing condition. A very good idea where hogs wallow in water is to occasionally add some of Dr. Hess dip and disinfectant so that it would be probably about one to 70 solution. No hog can be fed with profit if kept in a place contaminated with vermin and disease germs, no matter how nutritious or plentiful the food may be." An excellent practice, strongly advocated by Dr. Hess, is to have a specially constructed hog wallow. In this he is turning to good account the hog's natural disposition. He says, "It is natural for a hog to wallow." He would, therefore, provide a wallow in the feed lot or close to the feeding trough, which he would keep filled with water, and would add Dr. Hess dip and disinfectant occasionally. The object to be accomplished is, therefore; first, to clean the hog; second, to purify the air; third, to destroy disease germs. He explains that hogs will be constantly passing back and forth from the wallow to the feed trough, and that "while the dip will kill the lice and clean the skin, the drip will destroy the germs of disease and the worms that pollute the ground." Dr. Hess, dip and disinfectant is a standardized preparation and is guaranteed to be uniform in quality whether bought in gallon cans or by the barrel, and whether it is secured in Texas, California, Kansas, Maine or Florida.—Adv.

A Great Hereford Herd.

WE recently had the pleasure of inspecting one of the good Hereford herds of the state. There are only three herds of this breed in the state of any size and this is one of them, owned by Walter Brothers, Chippewa Falls, Wis. The breeding herd comprises 20 head of cows of the most popular breeding, Anxiety blood predominating. The important feature is that the cattle are properly cared for. The owners do not expect them to find shelter and feed around the straw stack, but they are cared for as valuable cattle should be. The heifers are by Beau Gomez 2d, a son of the noted Beau Gomez. There are a few by a son of Columbus Regent, the noted show bull. Just at this time they have a few bulls for sale. One was dropped in September, 1915, and he is all bull. Another one was a year old in November and is good enough to head a herd of registered cows. They also have some younger bulls, well bred and well grown. These bulls are right in every respect and we are glad to recommend them to anyone wanting Herefords. A young bull was recently purchased from the Robinson herd for service in this herd. He is sired by the well-known Maple Lad 33d by Bonnie Brae 8th and his dam is also by Bonnie Brae 8th, making him a line bred Bonnie Brae bull. He will be shown at the fairs this fall and should make a creditable showing. Keep this herd in mind, it will be heard from and if you want bulls this is the place to go. Mention The Wisconsin Farmer when writing for particulars.—Adv.

Poland China Futurity Assured.

DUE to the efforts of the secretary of the Wisconsin Poland China Breeders' Association, Burley Dobson, we are glad to report that the necessary nominations—20—have been received for the Poland China futurity to be held at the Wisconsin State Fair this fall. The following breeders have nominated their herds: James Derivan, Fox Lake; J. H. Peterson, Kilbourn; J. D. McDonald, North Bend; W. H. Esterly, Whitewater; Wm. Smiley & Sons, Albany; L. P. Martiny, Chippewa Falls; O. C. Olson, Strum; R. Meinking, Bangor; N. Kintz & Son, Berlin; C. S. Maltby, Janesville; John Sutter & Son, Fountain City; Heck Bros., Lyons; A. Neeseman & Son, Warren, and J. F. Diley, Rush Lake. Grant county leads with number of entries from one county, namely: C. S. Flesch, Mt. Ida; F. A. Morehouse, Lancaster; Bryant Bros., Hazel Green; J. C. Hendricks, Hazel Green; E. W. Hendricks, Hazel Green; W. F. Ackerman, Glen Haven, and Dobson & Eastman, Lancaster. We have been advised that Wisconsin was the first state to fill.—Adv.

Crandell's Wonder-Schoolmaster.

WE have just had a letter from Harry T. Crandell, Cass City, Mich., written March 17th advising that he has about 100 Chester White sows and gilts for sale due to farrow the fore part of April. Mr. Crandell raises Chesters by the hundreds, hence this number to sell at this time. They are out of the dams and sisters of his great show herd and are bred to Crandell's Wonder, grand champion Ohio State Fair, 1916, Allen Junior, champion Wisconsin State Fair, 1914, Schoolmaster, champion Chicago, 1916, Callaway Edd, grand champion Missouri State Fair, 1916, and School Boy, junior champion at Wisconsin and Chicago, 1916. He also has a nice lot of fall pigs, either sex. Here is a chance to get some Chester White sows, bred in the purple. Mr. Crandell will ship on approval and guarantee satisfaction and all stock sold is registered free of charge. No one could ask for a fairer proposition. Write for further description and please mention The Wisconsin Farmer.—Adv.

Fords Now Used as Portable Gas Engines.

WHAT will probably prove one of the most useful attachments ever made for the Ford is the Schluter auto belt attachment, which can be connected with a car in less than a minute's time.

The Schluter gives the farmer with a Ford car a gas engine, that is portable, guaranteed eight horse-power capacity, and retails for only $22.50, which is about one-sixth the price of an eight-horse-power portable gas engine. The Schluter is put out by the E. F. Elmberg Company, 52 Main Street, Parkersburg, Iowa, who sell it on a five-day trial, money-back guarantee. You can order direct from the advertisement on page 14 or if you want to investigate the proposition further write to the company for their big free circular which tells all about the handy Schluter attachment.—Adv.

Chester White Breeders' Attention.

FOR the benefit of those that were not present at the annual meeting of the Chester White Breeders' Association of Wisconsin, held at Madison during "Swine Week," we will say that it was decided to hold an association sale of Chester White sows at Madison during Farmers' Week next winter. The two association sales held, during the past winter by the Duroc Jersey and Poland China Associations were a grand success in every respect and there is no reason why the Chester White men of the state cannot have just as good sales if they'll coöperate and prepare in advance. The next two or three months will be the time to pick out the gilts that you intend to put in that sale. Don't sell all your good ones and send what you have left to the Madison sale, but pick out your best for that sale. This will be the opportune time to boost your breed, so plan accordingly.—Adv.

"Auto School News" and Free Catalog.

WITH the marvelous increase in number of automobiles used each year the demand for experts to fill profitable positions as testers, repair men, chauffeurs, garage men and salesmen has increased much more rapidly than the supply. The Michigan State Auto School, 1404 Auto Building, 11-19 Selden Ave., 687-89-91 Woodward Ave., Detroit, Mich, is doing much to meet this demand by training thousands of young men to handle all sorts of automobile propositions. They have a large building and equipment. A magazine "Auto School News" that tells about what the school and its graduates are doing, will be sent free, together with a new catalog, to any Wisconsin farmer who is interested. Read the advertisement on page 15 and write to the Michigan State Auto School for your copies. You will find them worth reading.—Adv.

Jones' Holsteins Stand Test.

LETTERS to S. E. Jones, Watertown, Wis., breeder of Holstein cattle, prove that the Jones cattle have lived up to the guarantee of physical perfection and good breeding. L. Heckner, Lincoln, Neb., who purchased a herd of 14 head for a partnership of which he was a member writes that the herd developed wonderfully well and that when a dispersion sale was necessary, the Jones stock averaged $345 a head. The eastern manager of the Carnation Stock Farms, in remitting the balance for a herd that was purchased under the Jones guarantee that they would pass the tuberculin test 90 days after the sale, expressed much pleasure at the result, as the entire herd had passed the test satisfactorily. Mr. Jones is advertising his Holsteins on this page. Read his advertisement and write him about your needs, mentioning this paper.—Adv.

Ventiplex Harness Pads.

IN order to introduce their products to the farmers) the Burlington Blanket Co., Dept. 10, Burlington, Wis., are offering to anyone, who will send them two labels from Ventiplex collar pads, a Ventiplex housing, for protecting the back and shoulders of the horse from chafing and rubbing of the harness saddle. The only cost is 5 cents to pay the cost of mailing. Ventiplex pads and housing are made of especial material, well ventilated, cool and sanitary. If you have never used the Ventiplex, why not give them a trial at the next opportunity? They will please you. Write direct to the company in case your dealer does not carry them, mentioning his name.—Adv.

Gormley Bros., Jefferson, Wisconsin.

THE Elmside herd of Holsteins has been producing some very creditable records the past several years. Mary Segis Beets was the Wisconsin Champion junior two year old for 1915 and 1916. This year she has come back and made 28 pounds as a junior three year old. King Beets Lyons, the present herd sire, have been in service for some time and is by King Lyons and out of the 32.6-pound cow, Segis Beets Girl. The three nearest dams of this bull average 30.62 pounds and the six nearest dams average 31.8. Gormley Brothers are consigning a 27-pound cow, a 26-pound bull, sired by King Beets Lyons and two other A. R. O. cows to the Lake Mills consignment sale.—Adv.

W. J. HEID, Ft. Atkinson, Wis., who has one of the best herds of purebred Guernseys in Jefferson county, is doing some good work with a number of cows now on test and has his herd in fine condition. Easterelius Hazel produced 69 pounds fat in December and Georins Hazel and Glorig of Lake Bluff, 80 pounds and 74 pounds, resepectively, for the month of January. Mr. Heid has a two year old that produced 48 pounds fat in one month, Trenores Glenwood. Trixy's George of Sunnyside, that was shown by Fox Brothers in 1913, has been recently purchased from Earl Roberts, and now stands at the head of Mr. Heid's herd.—Adv.

JOHN D. HETTS, Fort Atkinson, Wis., has recently sold a show bull sired by Juliana King Repeater to Alfred Sipple, Menomonie, Wis. The three nearest dams of the calf sold have some official yearly records that average 1,054 pounds butter. All of these records were world's records when made. Mr. Hetts has a number of cows about ready to go on test.—Adv.

150 HEAD PURE-BRED HOLSTEINS

Fond du Lac County Holstein Association Sale on the Fair Grounds at

FOND DU LAC, WIS.

APRIL 26 AND 27, '17

THIS is strictly a breeders sale, by the oldest breeders in the county who will stand back of their cattle, guaranteeing them breeders, free from abortion, and furnishing them with a certificate for tuberculin test supervised and signed by the State Veterinary, who will be at the sale to furnish bill of health to those outside of state. There will be no by-bidding or bidding in, every animal to be sold. These cattle are consigned by the nation-wide known breeders, such as W. J. Gillett & Sons, F. J. Bristol & Sons Co., S. C. Stanchfield, W. H. Steiner, S. M. Randall, Fletcher Bros., Tompkins Wright, S. H. Bird, W. P. Kissinger and others. Our offer consists of 100 head in milk, or to freshen, bred to high record bulls. Thirty heifers and heifer calves and 20 bulls ready for service with records up to 28.30 butter in 7 days. Auctioneers, Kelley, Haeger and Mack. Wood in box. Catalogs ready after April 15th.

HIGH-GRADE Holstein heifer calves, and in position to furnish single or car load shipments of selected well-marked calves at $18.00 to $20.00 a head. Also pure-bred bull calves. Send cash with order. Address S. E. Jones, Watertown, Wisconsin.

ROCKS—Pure-bred White and Barred. Day-old Chicks, hatching eggs. Early hatched cockerels reasonable. Mrs. J. F. Bloom, Route 1, Stillwater, Minn.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

MR. STALLION BUYER

WE still have on hand a large number of two coming three Percheron stallions, those colts now weigh up to 2,110 pounds, and if you are looking for an outstanding good one to head your herd of mares you should write and get prices on those colts. Our three-year-old and aged Percheron stallions are the best lot we ever had on hand. They weigh up to 2,300 pounds. In Belgians we offer a very strong lot from one to six years old. Among them is Bizarrie, a five-year-old sorrel chestnut stallion weighing 2,300 pounds. This stallion is as good as money can buy and fit to go any place. He must be seen to be appreciated. We have on hand a number of stallions from six to ten years old that have made seasons. Those horses weigh up to 2,100 pounds, and we will sell them very reasonable. We have a horse for every purse and know we can save you money. We want to buy 50 head of one coming two Percheron and Belgian stallions. Write us what you have. Send 25 cents in stamps for large horse hanger. Address

FRANK P. SHEKLETON & SONS — **LAWLER, CHICKASAW COUNTY, IOWA**

We are 50 miles west of Prairie du Chien, Wis., on the Milwaukee R.R., making direct connections for Lawler.

Durocs by Orion Col. S.

THOSE that are going to be in the market for Duroc Jerseys during the coming months should bear in mind the W. C. Jenkins herd at Bangor, Wis., the home of the big-type boar, Orion Col. S. We recently described this boar in these columns and we will not go into detail about him at this time other than to say that he is one of the few real good, big-type boars in the state of Wisconsin. Breeders of the state can use this breeding to good advantage, for it is comparatively new here. This boar is sired by Col. S. Jr., a noted boar of Ohio for which $2,500 was paid and he is out of Opal Orion by the great sow sire, Orion Chief. Mr. Jenkins has a fine lot of spring pigs coming on and they will be sold at weaning time. Keep this herd in mind and if you are going to want a herd boar it would be well to speak ahead for one of the pigs sired by Orion Col. S. Notice the advertisement that appears in this issue.—Adv.

NORTON FARMS R. R. 11 FRANKSVILLE, WIS.

HEAD YOUR HERD WITH A W INNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - WAUKESHA, WISCONSIN

Guaranteed Holstein Bulls

FROM 1 to 11 months of age, out of large record A. R. O. cows. They are sired by the great bulls, King Artis Pontiac and King Korndyke Veeman, that have records in their pedigree from 30 to 41 lbs. butter in 7 days. They are priced to sell.

Wisconsin Star Stock Farms Ed M. Schultz, Hartford, Wis.

"WHERE PRICE AND QUALITY MEET"

HOLSTEIN BULL CALVES by 32-lb. sires from A. R. O. dams. Popular breeding, good individuals. $100 up. Write and mention Wisconsin Farmer.

TULLOCH & FRIES' HERD GENOA, WIS.

Purebred Registered

HOLSTEIN CATTLE

Tilly Alcartra, a purebred Holstein-Friesian, is the most wonderful cow in the world. In 365 consecutive days she produced 30,451.4 pounds of milk or about 15 tons. In two years she produced 60,728 pounds of milk. She holds the world's milk record for one, two, three and four years. Holstein cows hold all world's records for milk and butterfat production, but the claim of the Holstein breed to the title of the "most profitable dairy breed" is not based on individual tests. It is the great uniformity of high productiveness of Holstein cows everywhere that makes them the greatest money-makers for dairymen, the world over. There's big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America

F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

WE OFFER NOW FOR SALE

THE CATALOGUE THAT SAVES THE FARMERS OF AMERICA OVER $1,000,000 EVERY YEAR!

"The best separator I know how to build." —Wm. Galloway.

Four New Sizes—Skimming Capacities 375, 500, 750 and 950 lbs. per hour

Get my new 1917 Wholesale Prices

SEND FOR ONE TODAY-IT'S FREE

Find out how I am dividing the melon by making better farm implements in greater quantities and selling them at the lowest possible prices. My prices on the highest quality Cream Separators, Gasoline Engines, Manure Spreaders, Tractors, etc., that I manufacture in my own chain of factories right here in Waterloo include only the cost of raw material, the skilled labor that is required to produce them and one small profit, based on enormous volume. I sell these goods direct to you---from FACTORY TO FARM. My motto is NO LOST PROFIT BETWEEN PRODUCER AND CONSUMER. Galloway prices have NOT advanced more than to take care of the increased cost of first class materials and the expert labor it takes to turn out high-class gasoline engines, cream separators, manure spreaders and tractors. I was the first manufacturer to offer a high-grade gasoline engine direct to you at one small profit. I built the first high quality spreader and sold it direct at a reasonable price. I was the first bona fide manufacturer of high-class cream separators to build and sell direct to you on the farm, cream separators as good or better than you have been paying fancy prices for. The whole story about the growth of the Galloway Institution, the policies and selling plans on which we sell high-class goods, the growth of the great chain of Galloway factories, the story of the MILLIONS OF DOLLARS OF SAVING I have made directly and indirectly for the farmers of America is told in Galloway's 1917 catalog. To get this book, to read it, to study it means an opportunity for you to save one-third to one-half on everything you need and it will prove that I AM STILL DIVIDING THE MELON WITH MY FRIENDS AND CUSTOMERS. Ask for this book today. Read the advertisement below. Please state what you are interested in buying and I will send the book free by the first mail. And I can safely promise that if you will get it, read it carefully and then order from its profusely illustrated pages you will buy better goods at less money than ever before. And, remember, that I back each sale with my $25,000 bank bond guarantee. Every sale must be satisfactory

NEW 1917 SANITARY CREAM SEPARATOR

is NOT EXCELLED in skimming ability, in beauty of design, in the fine material which goes into building, in workmanship, finish or the lasting satisfaction that it will give every user, by any cream separator on the American market. Remember, that we took four years to design and perfect this separator--to build into it every good cream separator feature.

It has not been built down to a price as many separators have been, but instead has been built up to a high standard IN OUR OWN FACTORIES right here in Waterloo. Don't get fooled on separators only assembled by so-called manufacturers and priced at figures you positively know a satisfactory sanitary cream separator cannot be built for. Stand the Galloway side by side with cheaper machines and YOU WILL SEE THE DIFFERENCE in material, workmanship, down-to-date design and skimming qualities. Stand it beside the highest priced machine--test them side by side for months and you will see that higher-priced machines will not run any easier or skim any closer, cannot be more perfectly sanitary, nor better built.

TRY IT 180 MILKINGS ON YOUR OWN FARM!

Note its few strong, simple, sanitary parts. See how easy to wash and clean--no sharp corners. How! catches any foreign matter in the milk while skimming. Only two shafts in the whole gearing, both of high-carbon steel, in long, perfectly fitted bearings. You will find all gear shaft and both bowl-spindle bearings supported by one casting--the gear case. This means perfect alignment, little wear and easy running. All working parts run in a SPRAY OF OIL. Note that the cream shelf drops when not in use--that it forms a vise to hold the bowl while handling.

I just want you to try this separator. If you like it, buy it. IF YOU DON'T, SEND IT BACK. We pay freight BOTH WAYS. If the new Galloway Sanitary is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is I could not afford to make this 90-day (180 milkings) trial offer, and could not afford to GUARANTEE IT TEN YEARS, nor make

EVERY SALE BACKED BY A $25,000 BOND

Ask for Galloway's 1917 catalog today. I want you to have this book. It tells how we build Galloway Sanitary Separators from the ground up. How they are designed, and the story of how we perfected this wonderful cream separator. It gives many separator secrets and facts. Chock full of dairy wisdom. Why by selling direct I can make a machine as good or better than many high-priced separators sold through the three and four profit system and sell it for much less.

MY BOOK IS FREE TO YOU

It tells the whole story. It tells the facts. It will settle the separator question for you. ASK FOR IT TODAY and mention cream separators.

MASTERPIECE ENGINES FOR 1917 INCLUDE EVERY SIZE-STYLE

No matter whether you want a stationary pumping engine, a 4 h. p. portable engine to move about, a 6, 9 or 12 h. p. saw rig, a horse portable 16 h. p. mogul engine for the biggest, toughest jobs--I BUILD THEM in my own factories right HERE IN WATERLOO and sell them DIRECT TO YOU at the actual cost of material and labor and one small profit which is based on tremendous output. I want you to try a Galloway engine on your own farm or in your own shop and see for yourself how scientifically they are designed, how wonderfully built, machined and finished. If you pay more you are PAYING TO MUCH. If you pay less for an engine than for a Galloway Masterpiece you COULD NOT POSSIBLY be getting as good an engine. I want a Galloway Masterpiece 1917 model gasoline, kerosene or distillate engine in every township between now and July 1st, and my 1917 special prices and proposition will put them there. Ask for Galloway's 1917 catalog today.

HERE ARE THE 1917 IMPROVEMENTS!

Galloway Masterpiece engines for 1917 are masterpieces of mechanical construction. My new simplified, improved models are master strokes in engine designing, built by master engine builders, of superior materials--every part standardized, interchangeable, alike. All Galloway engines develop WAY ABOVE RATED H. P. Bearings adjustable. Economy carburetor, worth $15 more on any engine--costs nothing extra on the Galloway--cuts down fuel bills. Valves in the head, exactly like highest-class automobile motors. Double ball governor, never sticks, regulates speed perfectly. Large, heavy flywheels. Large bore, long stroke, heavy weight, perfect balance. Galloway engines will not rack and tear themselves to pieces like high speed, light weight engines. Perfect lubrication, winter or summer. Magneto (extra) supplies blue-hot spark. Make and break Galloway igniter, never misses fire. EASY TO START--no cranking, needs no batteries. Cylinder and water pot frost-proof. Compare the 1917 Masterpiece engine size for size, bore, stroke, weight and low speed (which means easy running and long satisfactory engine life) then be your own judge. My

Air Cooled 1¾ H. P.

Water Cooled 1¾ to 2¼ H. P.

FIVE NEW SELLING PLANS NOW READY!

Buy on your own terms--cash or time--any way to suit you. That's how I sell all Galloway products. My 1917 book describes each plan in full. Tells how to pick out, size up and judge an engine. Tells why to insist on HEAVY WEIGHT, LARGE BORE, LONG STROKE and LOW SPEED. Tells how to install an engine and hook up machinery. How to lay out and build a cheap, efficient power house. Why our prices are so low considering quality. This book will guide you to saving upwards of $250 or even more in fitting up a complete farm power house. That is why I want you to get it.

HEAVY DUTY 4-6 9-12 16 H.P.

FROST PROOF NOT OVERRATED

1917 EFFICIENCY TRACTOR

Users call it the wonder of all farm tractors. It is unlike other tractors for we have eliminated unnecessary friction and built it along automobile lines. How far and how easily could you go in your automobile if it had an axle like your farm wagon or your mower? The Galloway Efficiency tractor is built with **anti-friction bearings.** Twenty-one sets of Hyatt roller and ball bearings--which save engine power for the draw bar and the pulley--where power is really needed. By actual dynamometer test the Galloway tractor only takes 13 1-2% of the motor's power to drive the tractor unloaded. On many tractors it takes from 30 to 60% of the engine power to propel themselves.

A ONE-MAN TRACTOR—OTHERS ASK $500 MORE!

This new tractor has a four cylinder, valve in the head, modern motor, water cooled; **all working parts protected.** 12 h. p. on the draw bar and 20 h. p. on the pulley guaranteed. Turns short. Weighs 5,200 lbs. Transmission a unit with the motor. We have **exclusive manufacturing rights** on this patented transmission. Will pull three 14-in. bottoms 8 to 9 in. deep in clover or timothy sod. Will do any portable engine job--sawing, silo filling, corn shelling, shredding, handles a 28-in. grain separator, any kind feed grinder, a pumping or irrigation plant. **Double chain drive.** Engine runs in tight oil-bath case. Rear wheels 58 in. high. Famous Pierce governor on the motor—engine never races. **Only two levers control it.** Complete description of this wonderful farm tractor in my new 1917 book.

Le Mars, Iowa, November 15, 1915.

Wm. Galloway Co., Waterloo, Iowa.

Gentlemen:—

I have tried it out in every way and it is right up and coming. I have run an ensilage cutter with it, filling a silo 16x32 ft. two-thirds full in 4 1-2 hours and it was play for it. I have plowed in all kinds of soil, stubble, backsetting and clover sod and wild prairie sod. I can pull the three plows 6 inches deep in the prairie sod and do it with ease. I know it has power enough to pull four plows in stubble. It is very economical on gas and oil. After the demonstration here three different parties here told me it did better work than at the Fremont plowing match.

GEO. R. STEELE.

My new catalog illustrates and describes this tractor in full. Ask for it today. If you are going to buy a tractor within the next twelve months, kindly let us know.

Driver in Absolute Control at All Times

Plows, Hauls, Threshes, Saws, Grinds, Shreds, Grades Roads, Fills Silos

Will Pull Three 14-in. Bottoms 8 to 9 in. Deep in Clover or Timothy Sod

Pulls anything, anywhere, any time.

Does anything a 12-horse team or 20 h.p. engine will do.

MY No. 8 IS NOT A HORSE KILLER

But is the lightest draft, best built, low down spreader in the world, with all four wheels under the load. It is worth more to you **in the field in actual use** than any other spreader. First—it is low down—only 42 in. high to center of box. Two horses handle it anywhere. The Galloway wide spreading V-rake — **worth $15 extra** on any spreader, costs you nothing extra on the Galloway. The invincible irresistible patented roller feed—an exclusive Galloway feature—the secret of its light draft—**alone worth $25** on any spreader, costs you nothing extra. Patented automatic stop, uniform clean-out push board—**worth $10 extra** on any spreader, costs you nothing extra, exclusive on the Galloway.

SHORT TURN—WHEELS UNDER LOAD —STEEL BEATER!

These are **only a few** of the special features you will find on the Galloway spreader, all of which are protected by Galloway patents. Don't buy a spreader of any make or kind until you have tried a genuine Galloway 1917 model No. 8, No. 5 or No. 1A at our risk, **without obligating yourself** in any way. Give my spreader THIRTY DAYS' ACTUAL FIELD TRIAL and return to me within one year if not perfectly satisfactory. Could anything be more fair? Could you want a better offer?

My 1917 spreader improvements include beater bolts 1-16 in. larger with lock nuts. Beater bar bolts increased in size and strength. Beater teeth longer and stronger than ever--tear the toughest manure finer than ever and spread it easier. Rear shaft increased in strength--higher carbon steel used. Larger drive sprockets, which mean lighter draft than ever. Fifth wheel castings larger and stronger--makes spreader box steadier in turning. Rear conveyor shaft now made of 40 carbon steel. All steel tongue. All metal parts thoroughly coated with asphaltum weather-proof paint. Spreader box better finished and painted. No other spreader compares with it.

ASK FOR MY 1917 CATALOG. It tells all about manure spreaders--how to increase your corn crop. How to increase small grain crops by the judicious use of manure. How to handle manure with the least labor. How a Galloway spreader will pay for itself in one year by increasing crop profits. How we save you money on a high class, light draft spreader and **still give you a better spreader than the old-fashioned, cumbersome three and four-horse machine.** How a run-out, unproductive farm was turned into a gold mine crop producer. Why I built a manure pit on my own dairy farm to save all fertility. Ask for this book today and if interested in spreaders please say so.

Gear lever throws both both sides of beater in gear simultaneously.

Adjustable Feed Lever—Convenient, Accessible.

All-steel V-shape rake Patent roller feed

Angle steel endless apron. Double chain drive.

Steel Tongue

From 4 to 24 Loads Per Acre

ASK FOR MY BOOK TODAY! NOW!

I want you to have it. All I ask you to do is tell me what you are interested in—what you expect to buy—what you need on your farm, whether one, two, or all of the above lines that we manufacture. A postal card will do. Make it a letter if you like. I know I can save you money if you will get this book before you buy. It will show you that I am still dividing the melon here in Waterloo. Remember we ship engines, spreaders, separators from our transfer houses in Council Bluffs, St. Paul, Chicago, Kansas City and from the factories here in Waterloo. Also remember that we WANT YOU TO COME AND SEE US any time you can. The latch-string is always out at the Galloway Agricultural Club—a building that we put up to take care of our friends and customers when they come to see us. Thousands visit our offices, club building, display and sample rooms and factories every year. Why not come and see us yourself?

VOL. XLVI. NO. 15. THURSDAY, APRIL 12, 1917. WHOLE NO. 1837

A Show Herd Which Produces.

Seitz' Ayrshires Not Only Beautiful to the Eye But Also Show Profits at the Milk Pail.

AYRSHIRES have by many people been considered the typical cow for eastern, far western and northern conditions and many great herds are located in these sections. The claims made by our Canadian brothers to the north and by the breeders on either coast of the United States received a severe setback by the showing Wisconsin made at the last National Dairy Show at Springfield, Mass. Here the Adam Seitz herd proved their superior breeding in nearly every class shown.

Mr. Seitz started with Ayrshires in 1903, shortly after moving to Waukesha county from another part of the state. According to Mr. Seitz his purchase of a farm near the city of Waukesha is the best move he has ever made in his life. As he had some experience with pure-bred cattle and hogs previous to his purchase of Ayrshires his mistakes have been few and far between. The first animals which he purchased came from the East, but the selection showed such good judgment that they were shown at Illinois and Wisconsin in 1903, where the seven animals won eight prizes. This was the beginning of Mr. Seitz' showing. His efforts have been accompanied with exceptional success.

The Seitz farm consists of 240 acres. About 100 Ayrshires form the breeding herd. Among the herd are some of the finest blood that the Ayrshire breed can boast. Heading the herd is Bargennoch Gay Cavalier, a bull imported from Scotland in 1907. He has a long string of victories in the show ring to his credit, beginning with the Alaska-Yukon Exposition at Seattle in 1909, where he was senior champion. He was first prize senior and grand champion at Iowa, Minnesota, Wisconsin and Illinois for four successive years, 1910 to 1914, first prize senior and grand championship bull at North Dakota, Iowa, Minnesota and Wisconsin and at the Iowa Dairy Cattle Congress and the National Dairy Show at Chicago in 1912 and 1913. In the four years from 1912 to 1916, inclusive, the Seitz herd has won over 750 first prizes, championships and grand championships, twelve silver cups and some thirty diplomas of merit. In the same four years the get of Bargennoch Gay Cavalier stood undefeated in the face of some lively competition.

At the National Dairy Show were the best herds from Quebec, Vermont, New York, New Hampshire, Maryland, New Jersey and Massachusetts. The Wisconsin herd, however, took most of the prizes and their owner, Mr. Seitz, of Waukesha, was awarded the trophy as the premier breeder of Ayrshires.

The herd is not expected to sell upon its merit in the show ring alone, as Mr. Seitz is a firm believer in testing. He has made every cow give an account of her worth by the milk scales and the test since he has started in the dairy work. Several good records have been made on the Seitz farm which can be directly traced to the blood that is combined in the sires and dams of the cows through good ancestry. One of the most noted of the Seitz Ayrshires has been the cow, Imp. Kilnford Bell 3d, which was imported from Scotland. She was a winner at the state fairs wherever she was shown and her preeminence was further established when she was awarded the silver cup for grand champion cow over all dairy breeds at the National Dairy Show in 1913 and 1914. She won the three-day butter fat test over all breeds in 1913 at the Illinois State Fair. The production record of this cow that has traveled more than any other cow in her many tours for showing purposes and has to her credit probably a larger number of prizes than any animal of any breed, is in spite of the handicap of the road work, the creditable amount of 13,565 pounds of milk and 615 pounds of butter as a five year old. Her death a few weeks ago is a keen loss to the breed and the owner. She has produced a great number of first-class heifers and bulls, now in the Seitz herd.

According to Mr. Seitz irregularity in feeding and lack of attention are the causes of many disorders that breeders have to contend with in a herd of pure-bred cattle. It pays to watch a cow the year around in order to have a definite idea of what each animal is in need of so that proper attention can be given each individual at the right time. "I watch an animal all the time from feeding them in the morning to turning them out in the pasture and milking them at night. The cow wants her feed at the same hour each day and though it is often disputed, there is no doubt in my mind that irregularity will affect a cow's production very noticeably." Too many men consider the cow from the wrong standpoint. Because a person can be driven to work or will work in spite of changes in diet and irregularity of diet, it is not said that a cow will act in the same way. A cow must be coaxed. She must be treated fairly in order to induce her to produce her best.

Mr. Seitz has interested his boys in farming and in the raising of pure-bred Ayrshires. Each of the six boys has certain animals to take care of and definite work which they are responsible for. They are not asked to do impossible things, but according to his age each is entrusted with a certain amount of responsibility. As a reward for his work each has a share or owns in full certain animals, the sales of which have netted tidy sums on various occasions. This helps to hold their attention to details and under the able guidance of Mr. Seitz with his many years of experience in breeding and showing, the fine points of the game are taught them. Why an animal will not be worth as much as another and the reason for a smaller demand for certain kinds of cattle can easily be tra

CURRENT EVENTS

con-
ena-
were
...tion; Gronna, of
...ota; Norris, of Nebraska;
Stone, of Missouri; Lane, of Oregon, and
Vardaman, of Mississippi. The first
three are republicans, the last three
democrats. The principal speech against
the war resolution was delivered by
Senator LaFollette, who said the United
States has not the confidence of the
other American republics because of its
war policies. He predicted that our
entrance in this war would not shorten
the conflict "but will vastly extend it
by drawing in other nations." It is
idle, he declared, to talk of a war on
the German government and not on the
German people. He was answered,
bitterly, by Senator Williams, of Mis-
sissippi, who said: "The speech of the
Wisconsin senator would better have
become Herr von Bethmann-Hollweg
than an American senator. In fact he
has gone further than Herr von Beth-
mann-Hollweg would ever have gone.
Bethmann-Hollweg said the use of the
submarine could be justified only on
the ground of necessity, the senator
from Wisconsin puts it on the same
footing as Great Britain's interference
with our commerce. I fully expected
the senator from Wisconsin before he
took his seat to defend the invasion of
Belgium, the most barbarous act ever
committed. I heard from him a speech
that was pro-German, pro-Goth, pro-
Vandal, and which was anti-president,
anti-congress and anti-American."
Aside from this tilt, the resolution went
through the senate with but little ex-
citement, the feeling being one of
solemnity rather than of enthusiasm.

THE war resolution was passed by the lower house of congress by a vote of 373 to fifty, the opposition developing unexpected strength in the last hours of the debate. Representative Kitchin, the democratic leader of the house, led the opposition, declaring: "Too grave is the responsibility for any one to permit another to stand sponsor for my conscience. My conscience and judgment, after mature thought and fervent prayer for rightful guidance, has pointed out clearly the path of my duty, and I have made up my mind to walk in it, if I go barefooted and alone." Representatives Mann and Cannon and other republican leaders spoke in favor of the resolution. Both houses having passed the resolution it was signed by Vice President Marshall and Speaker Clark and hurried over to the White House for the president's signature.

CHAMP CLARK of Missouri, was re-elected speaker of the lower house of congress last week, over James R. Mann, of Illinois, by a vote of 217 to 205, so that he will preside over the deliberations of that body at this extra session, as he has done at the last two regular sessions. The house lost little time in getting down to work. Four big appropriation bills which failed in
ng hours of the
sed by the house
t day. The bills
s of more than
e: Army, $240,-
138,241,000; gen-
000, and military
No changes were
made in the measures as they passed the house at the last session. Numerous emergency amendments will be added in the senate and the final bills will be drafted in conference in the interest of speed. Tentative plans now being discussed are to pass a special deficiency bill similar to one carrying $50,000,000, which was passed prior to the Spanish-American war, to be used in any emergency which may arise in the various departments.

HERBERT C. HOOVER, the former Iowan who has been in charge of the Belgian relief work for the past two years, has sent a cablegram to President Wilson, in which he says: "For two and one-half years we have been obliged to remain silent witnesses of the character of the forces dominating this war, but we are now at liberty to say that, although we break with great regret our association with many German individuals who have given sympathetic support to our work, yet your message enunciates our conviction, born of our intimate experience and contact, that there is no hope for democracy or liberalism and consequently for the real peace and safety of our country, unless the system which brought the world into this unfathomable misery can be stamped out once for all." The members of the commission have left Belgium, because of the war situation, but relief funds are still being collected and the work will ...ued as best it can at a distance.

...re-
...o

plan and the military reasons for the need to train the number of men the bill will produce. This is believed to be not less than 2,000,000 to be trained within two years.

BARON DEVONPORT, British food controller, has ordered that, beginning April 15th in English hotels, restaurants, boarding houses and clubs there shall be one meatless day weekly. The controller has also ordered that no potatoes or food containing potatoes shall be allowed, except on meatless days, and on Friday. The order imposes restrictions on the quantities of meat, sugar and bread at meals served in hotels, restaurants, boarding houses, and clubs. The scale for meat is for breakfast, two ounces; luncheon, five ounces, and dinner five ounces. The bread restrictions call for two ounces at all these meals. Baron Devenport in ...plaining the order, said he expected ...ult in a saving of 65 per cent of ...ow consumed, 53 per cent of ...3 per cent of sugar. He ...vinally intended to order ...ys, but feared this would lead to an increase in bread consumption.

BRITISH naval circles would welcome Brazil as an ally, considering her the most important neutral after America for the entente cause. Her adhesion to the allies would provide excellent harbors for operations in South American waters, where German raiders have more opportunity than anywhere else to interfere with food supplies for Europe. At present the allied warships have to contend with the difficulties of coaling at sea. Cuba is also considered important as affording submarine bases. According to information in London Germans are flocking to Mexico from South America, having taken with them considerable quantities of arms and ammunition.

Do Not Put Up With Power That ...

...and in hand with inefficient farm power apparatus. Soil scratched with light plowing that reduces production, crops lost with poor threshing that wastes the yield, soon eat up the saving made in the purchase of a cheap and light farm engine. The farm engine should be a good one, capable of doing work that will bring returns in proportion to its cost. No better engines can be found than those that bear the Nichols & Shepard name as members of the

Red River ...pecial Line

...tractors there are five ...fteen variants, 13-40 to ...burning any kind of ...l or straw. In Oil- ...sizes are built, developing ...nothing

No Engine can be as good as the Galloway that doesn't have these exclusive Galloway Features.

Valve in the Head Type Cylinder

Note large exhaust valve. Engine head perfectly water cooled. Valve stems also, can't warp. Large intake valve, means ample charge of gas, perfect combustion. No fuel waste. Automobile-ground valves insure perfect compression.

Arch-of-Strength Cylinder Head

Positively cannot blow off. Held by steel studs--nuts perfectly seated, insuring the greatest possible strength in a cylinder head. Absolutely gas tight joint with end of cylinder. This type of cylinder head provides nearly double amount of water space found on other styles.

Sure-Fire Make and Break Igniter

Webster oscillating magneto makes blue-hot spark. Needs no batteries. Absolutely sure fire. Weather does not affect it. Eliminates all ignition troubles. Thousands in continual operation for years without replacing igniter points. Gives least trouble from soot or carbon of any type igniter we ever used. You will get results and satisfaction in using this type on your engine at any time of year, winter or summer.

Economy Carburetor

Worth $15 more on any engine, costs nothing extra on the Galloway. Cuts down fuel bills. Simple, positive air valve adjustment--regulated at will--easy starting in any weather. Mixes perfect fuel charge. Makes gasoline most perfect fuel. Has special cold weather valve which makes easy starting in cold weather. Also gets great power from small amount of gasoline. A great saver of high-priced fuel. Our own invention. Used on all Masterpiece engines. The logical carburetor for you to have on your engine, making it cheaper and better than kerosene.

One-piece Cylinder and Base

on all Galloway engines from 4 to 16 h. p. insures perfect alignment of cylinder, piston, connecting rod, crank shaft and flywheels. Absolute uniformity of wear. Only scientific and successful method of construction for large, heavy duty, heavy weight engines. Two-piece cylinders and frames cannot be kept in line.

BA-6

LOOK! THIS 1917 MODEL!

Go over it point by side with any horse power or the that no better engine have told you to compare the Galloway engines with other engines! That's what my customers have done and that's why the annual sales of Galloway engines run up into the thousands upon thousands. For hard, tough jobs, for year in and year out satisfaction they have no equal at higher or lower prices. If you pay less for an engine than a Galloway Masterpiece you could not possibly be getting as good an engine. If you pay more it would only be paying too much. Large bore, long stroke, simple design, heavy weight, mechanical perfection in their building make them power masters in their field. No matter what size or style engine you want I build them here in Waterloo in my own great chain of factories to fill every need. My 1¼, 2½, 4 h.p. and other sizes are just as scientifically designed, built, machined and finished as my mogul engines from 1 to 16 h.p.

by point, feature by feature, compare it side other make of engine of the same rated same bore and stroke! You will decide gine is built. For years and years t

SIX 1917 SELLING PLANS --CASH OR TIME

No matter which way you want to buy I have a plan that will suit you—Cash, Bank Deposit, Half Cash—Half Note, All Note, Installment, and No Money Down, to responsible people. Galloway's guarantee is absolute satisfaction or your money back, and he pays the freight both ways. Remember my

$25,000 LEGAL BANK BOND ABSOLUTELY PROTECTS

you and every one of my prospective customers and proves my willingness to have every claim and statement I make fully investigated. I want you to try a Galloway engine on your farm—in your own shop. That's why I have prepared my new 1917 special proposition. I want a Galloway Masterpiece 1917 model gas, kerosene or distillate engine in every township in every state between now and June 1st, and my **new 1917 prices** and selling plans will get them.

NOTE 1917 IMPROVEMENTS

Adjustable bearings, no lost motion, develops way above rated horse power. Economy carburetor, worth $15 more on any engine, costs nothing extra on the Galloway—cuts down fuel bills. Large valves in head, exactly like highest class automobile motors, perfect scavenging, admits perfect combustible mixture. Double ball governor. Large, heavy flywheels. Big bore, long stroke, heavy weight, perfect balance, smooth running. Perfect lubrication, winter or summer. Webster magneto (extra) supplies blue-hot spark. Make and break igniter, never misses fire. Easy started, no cranking, needs no batteries. Cylinder and water pot frost proof. Galloway engines honestly rated, scientifically, accurately and handsomely built. Our description the truth. Shipments made from Waterloo, Council Bluffs, Kansas City, St. Paul, Chicago, whichever is nearest you.

GET THIS 1917 BOOK ABOUT ENGINES

I want you to have this new book about the famous Galloway Masterpiece engines. It tells you how to pick out, size up and judge an engine. Gives you engine secrets and facts. Tells why to insist on heavy weight, large bore, long stroke and low speed—why light weight, high speeded engines are not to be compared with Masterpiece engines and why you are asked four profits for some engines no better. Tells why we sell direct from factory to farm or shop at wholesale. How to install an engine and hook up machinery. How Galloway engines are built. How to lay out and build a cheap, efficient power house. Why our prices on high class stationary and portable engines and saw rigs are so low considering quality. The truth about engines is all set down in black and white. This book is a guide to saving money on every farm. That's why I want you to get it. If you expect to buy an engine I'll pay the postage and be glad to send the book. Ask today. A postal will do. Address me as below.

The Wisconsin Farmer

THURSDAY, APRIL 12, 1917.

FAMILY CIRCLE TALKS BY THE PUBLISHER

THE SUPREMACY OF NORTHERN WISCONSIN.

NOTHING gives me greater pleasure and satisfaction than to have readers of The Wisconsin Farmer consult me on matters in which they are interested and ask my advice on subjects which lie close to their hearts. I always answer to the best of my ability, giving whatever facts I can secure and detailing my personal experiences and observations at such length as the occasion seems to demand. By this means I come in closer touch with my readers, learn what they are thinking about and widen the sphere of my own usefulness and interest.

One of the letters which has come to The Wisconsin Farmer office within the last two weeks in which I was most interested was the following, from a resident of Iowa who is desirous of moving here among us and casting his fortunes with the good old Badger state. I quote the letter exactly as it came to me:

Office of the Royal Lumber Company, Charles N. Wells, Local Manager, Ayrshire, Iowa, March 28, 1917. Dear Mr. Pierce: I spent my life until nineteen years of age upon an orchard and dairy farm in the state of Maine. From my twenty-second to my thirty-first year I managed alone a 500-acre Maine farm. I studied scientific farming through four winter courses of six weeks each, but circumstances, or rather a malignant case of catarrh, drove me into the dry sections of Oklahoma where there were no orchards and no dairies. I have never lost my love for domestic animals, although I have been in mercantile positions until I am now forty-seven years old. I have $7,000 to $8,000 and contemplate a trip to Marinette or Oconto county, Wisconsin, for the purpose of buying some stump land to make into my future home. I am in good health, married, but have no children. I am receiving a salary at the present time of $1,200 per year. Would you consider it safe for me to change occupations? Would you suggest anything in favor of or against my selection of the new lands of Wisconsin? I have never been in debt and do not intend to start the practice now. Respectfully yours,

CHAS. N. WELLS.

I assure you, I answered this letter with the greatest pleasure, giving the matter most careful consideration. Northern Wisconsin wants settlers such as Mr. Wells discloses himself to be, in his letter; men with enough capital to start them and keep them going until the newly-cleared lands become productive, men with farming experience and with business knowledge sufficient to enable them to master the marketing problems and the other matters upon which our agricultural success depends almost as much as upon production itself. I thought over Mr. Wells' letter for two or three days, then I sent him the following reply:

Office of The Wisconsin Farmer, April 3, 1917. Dear Mr. Wells: I have delayed replying to yours of the 28th for a few days in order to give the subject matter my most careful consideration. I proprose to back up my individual opinion with certain facts and figures which I believe you will find valuable.

To begin with, I do not believe you will make any mistake whatever in investing in northern Wisconsin and moving there—even from old, established Iowa—to take up your new home. There is no other body of land, in my opinion, in the entire United States, which offers equal opportunities today, in the way of present income from the cultivation thereof and future increase in land values as the country becomes more fully developed. There are twenty-five counties in northern Wisconsin which have more or less of the cut-over lands. The area of tillable land, as yet uncleared, in these counties, approximates 10,000,000 acres. This is sufficient to make 100,000 farms, each 100 acres in extent, if the land were all cleared and put under cultivation. I am confident the day is coming—and not far distant—when this will have been achieved. The men, therefore, who get in on the ground floor and who aid in the development of this wonderfully rich country are the men who will prosper the most.

I have made a personal investigation of northern Wisconsin and I find the soil to be divided into two classes: The sandy soils and the clay soils. Both are very productive, the latter particularly so for grains and grasses, the former for potatoes and all root crops. A deficiency of rainfall has never been known in this section, so that Nature has abundantly and perennially blessed it. The land lies well, is generally rolling and when cleared of timber and stumps will be found to resemble very closely the Iowa prairies with which you are already personally familiar.

The question of a market is most important, when land is being purchased. Did you know that more than 10,000,000 people live within a night's ride of Upper Wisconsin? For markets this section looks to such cities as Chicago, Milwaukee, Minneapolis, St. Paul, Duluth and Superior. Freight shipments from Upper Wisconsin, in many cases, reach the market the following morning, while in no case is the journey longer than two days. There is also a decided advantage for this section in the matter of freight rates. I need only call your attention to the fact that it costs $344 to ship a carload of dairy products from Montana to Chicago, while the same car can be shipped from Marshfield to Chicago for only $66. These things must be carefully considered when weighing the advantages of northern Wisconsin against those of new lands elsewhere.

It is my honest, earnest opinion that there is no similarly fertile area, as yet unclaimed, of equal extent, so close to market, available at such reasonable prices, for the man who is not afraid to work, with a certainty of profit as a reward of his labors. With your agricultural training you should be able to make a decided success.

Trusting that this answers your questions and assuring you that I shall be only too glad to assist you in any way possible, I remain,

Sincerely your friend,

JAMES M. PIERCE.

I have not heard from Mr. Wells since sending him this letter, but I confidently believe he will make the Wisconsin investment and will soon be one of us, working with might and main to realize the immense possibilities with which northern Wisconsin teems, more than any other section of the country, in my honest opinion. With greater opportunities in farming today than ever before, with the products of our Wisconsin farms being in greater demand and bringing higher prices today than ever before, we cannot do a better service to our state and our country than to exploit the advantages of Wisconsin and add skilled, ambitious, industrious farmers to those by whose labors Wisconsin has already become so rich and great. I am a booster for northern Wisconsin, heart and soul, and shall be well rewarded, indeed, if, by my humble efforts, I can add to the number of determined men and women who are bringing these fertile cut-over lands under cultivation and adding millions of dollars annually to our already immense crop values.

AN ADVOCATE OF THE OLD MAN.

AN ADVOCATE of a new hired hand comes among us this week. He champions neither the young unmarried man, dreaming of his lady love as he goes about his chores or toils in the cornfield under the burning sun, nor the married man with his family to keep him home nights and make him more or less of a permanent fixture on the farm. His entry in the farm hand "free-for-all" is the "old man who cares not to ever marry." I do not know whether he limits his entry to bachelors or will admit widowers, but in any event it is evident that what he wants is a man too old for love's young dream to keep awake at nights. My friends, allow me to introduce Mr. W. S. Napier, of Cane Hill, Ark., who writes me in this manner:

Dear Mr. Pierce: I always read your page of views the very first thing when your good paper comes. The subjects you discuss are of concern to us all and you treat them splendidly.

I have a lease on a fine, large farm for five years. The lease is satisfactory both to myself and to the landowner. Now, as to hired help. Give me the married man or an old man who does not care to ever marry. My present help is an old gentleman who has a house to himself on the farm, but who eats with me. For his comfort and pastime I gave him a sow and pigs and my wife gave him twenty hens. He has a horse and buggy free to use when he wishes, but he rarely goes any place. But when picnics or reunions come around I tell him and my son they must go, and in the future they must go to the county fairs, too. My advice is this: Look out for the old man and give him a place.

I welcome the new feature which this letter brings to our discussion. There is many a good day's work left in many an old man; why not give him a chance, as Mr. Napier suggests? If any others of my readers have had experience with elderly men I would appreciate it if they would write and share their views with us here, before we close the subject.

And now, another champion of the single man, who has the better of it in the discussion so far. The writer modestly asks me to suppress his name, but I will state that he lives in Walworth county, Wisconsin, and is well known as a good, practical farmer. He writes as follows:

Dear Mr. Pierce: I worked out about two-thirds of my time from ten years old to twenty-nine, so you see if everyone felt as the man who wrote you about single help I would have been out of work a good deal. I say, treat the man who is working for you as one of your own. Tell him to use the bathroom every night if he wants to. Most men will use it six nights out of the week from June to the last of September. And if you do not have a bathtub, let them use that old washtub of mother's. I must say the washtub is good, and I have never seen a man yet but who will use the washtub or bathtub once a week if he is a man.

When I was working out those nineteen years everybody treated me as one of their own and I tried to pay them back. Give that young man that Sunday evening off. Let him have a horse to ride, or your team and buggy. He will appreciate your kindness. That is the highest wages he gets. Treat him as though he is white, then if you are called away on Sunday ask your single man to stay and look after your stock. What will he say? "Yes, sure, I will do it." The last few years I have been hiring help, but as yet I have not had the pleasure of using a married man. Single men suit me, with their Sundays off.

I am immensely pleased by the fact that so many of the men who are writing me on this subject were once hired hands themselves. They have graduated into the renting and owning class of farmers. This is the agricultural advancement; first, the farm hand; second, the renter; last, the owner farming on his own land. I wish I could find out just what proportion of landowning farmers once worked out, by the day or month, for others. It seems to me the government could not include a more interesting subject for its next census returns. I imagine the figures would be found astonishingly large.

I am intensely interested in this subject and I believe most of my readers are, too. Perhaps the main reason I am so interested is because I served my turn as a farm hand myself. I was only fourteen years of age, when, my father having gone to serve his country in the civil war, I worked out as a hired hand for five months, at the princely wage of $5 a month. That was back in Ohio, where my boyhood was spent. I well recall that of the $25 which I earned during the five months I was thus engaged, I carried $12.50 back to my mother, who found it a veritable godsend in her arduous task of making both ends meet during those trying financial times, my father having lost his life during the siege of Vicksburg. Later on, when I was twenty-one and had come out to the grain belt to seek my fortune, I worked out again, for several months, receiving 75 cents a day. I know how the hired man feels on most subjects. I sympathize with him deeply and honor him highly. I can assure my Walworth county, Wisconsin, friend that that old washtub of mother's, the bottom slippery from many a week's suds, has often sufficed me for a bath, and a good one, too. It is just this fact that almost every letter brings to my mind some experience of my own which makes my correspondence so intensely interesting to me.

So, I say, let the letters continue to come; they will always find a welcome reading and I shall publish as many of them as I possibly can, so that you may all enjoy them with me.

DO WE WANT WAR?

I AM in receipt of a letter from a good "mother in Israel," living near Hollandale, Wis., which offers me the most fitting text I could ask for a declaration of my views on the war situation. Some of these views I have outlined, from time to time, in the past. It seems to me fitting now, however, to gather them together in a complete statement of personal convictions in the present crisis. First, let me give you the letter, exactly as it came to me, simply suppressing the name of the writer, as requested by her:

Dear Mr. Pierce: I can't see why Senator LaFollette gets so many knockings these days. I think his influence to keep us out of war ought to be a great honor to the state of Wisconsin. What benefit would war with Germany be to the people of the United States? Thousands of men would be killed and more crippled for life.

If America were to honorably try to avoid war American citizens and American ships would not enter the war zone. I think it is a disgrace to this country to send arms, munitions and explosives to the warring nations. It shows neither neutrality nor patriotism. Militarism, capitalism and all the patriots who know they can profit by its continuance are crying for war.

I have in my mind a business man in Chicago (my daughter was his stenographer). When the first news was out about the trouble with Mexico, in the spring of 1914, he was rejoicing over the prospects of war. The first thing every morning he went to the recruiting headquarters to find out how war was progressing. This man never cared what war with Mexico would cost the United States in lives and money; his wish for war was because it would make his business prosper. *He is a pension agent.*

Some people picture war "as a line of troops advancing with lances flying and bands playing, and perhaps a wounded soldier with a white bandage across the brow," but let me quote a portion of a letter I received some time ago from a brother who is an employe on one of the main railroads of Switzerland. Here is what he wrote:

"When we see trainloads of families, so poorly clad, so starved and pitiful looking, fleeing from their warring country, it brings tears to our eyes. Still sadder to look at and talk to are the crowds of wounded soldiers as I saw them every day last winter. When we see twenty men together with only six arms and thirty men together having only ten legs it makes us pray out loud, 'God save us from war.'"

I don't know if you are a friend of LaFollette or not, but just the same it gets me angry the way other papers have criticized the few senators who tried their best to prevent war, calling Senator LaFollette names that any publisher ought to be ashamed to print.

Whether I am "a friend of LaFollette or not," in this connection, is really a secondary matter; but I have no hesitancy in assuring my correspondent that I am a friend of the senator. This personal friendship is of long standing. When I bought The

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Clean-up and Paint-up Time.

Spring time is a clean-up time everywhere and the farmer should not neglect to do his part. If the women folks are consulted there is not a shadow of doubt that a good many jobs of papering, cleaning, painting, etc., are not only wanted but really needed. It may not be practical to do all of the work needed—at least not until after seeding is done.

The use of good paints for the protection of farm buildings is a matter of more than passing importance. The buyer of paint this season must expect to have to pay a little more money for these materials. It will scarcely be possible to get good barn paint as cheap as we did a few years ago. Paints are made of minerals and oils and no materials have been more influenced in price by the war than these. We do not say that paint should be used regardless of price, but we do insist that good paint, properly put on the exterior of farm buildings is sufficient protection to warrant even a greater expenditure than we have been accustomed to in former years.

New buildings should have a good prime coat, chiefly oil for filler, and at least two coats of paint. Three coats would afford sufficient protection to warrant the additional cost [illegible] buildings should have two coats of [illegible]. It is usually best to paint in [illegible] early spring, the latter part of April and the month of May being regarded as the painting season. Painting, however, in this climate may be done satisfactorily until the middle of June unless the season is unusually dry and dusty. When the bugs and flies and gnats come on in the hotter weather they will, with the dust, make painting an unpleasant, and, in many cases, an unsatisfactory job.

While the usual rule is to give old buildings, which have been previously painted, two coats, we have known very satisfactory jobs with one coat, where the old paint was not too old or cracked. In putting on one coat it is best to change the color or shade as little as possible. A decided [illegible] in color will make more than [illegible] necessary to cover. In all [illegible] where there are new boards [illegible] boards should have a primer and sufficient paint to make as many coats as the older boards on the same job have had.

Lead and zinc are chief elements of paint, and most makers of pure paints are glad to divulge to the buyer the chief ingredients in the paints they offer. Any reliable dealer will explain the difference between pure paints and paints which are made out of cheap and inferior materials. As the dealer wants the farmer to get a good job he is usually anxious to sell the best paint, even though his profit may be greater on other brands.

Prepared paints, in these days, are so well mixed and proportioned that farmers can do a great deal of their own painting—a thing which they hesitated to do when they were obliged to mix the paints as well as spread them. Paints and varnishes for indoor work are especially serviceable. If the women folks want floors painted, don't worry if a good painter is not at hand—get a good brush and a can or two of reliable floor paint and do the work yourself.

The writer has had considerable experience with wall paints and for bedrooms, kitchens and hallways they are very serviceable. Especially is this true in the kitchen. Some wall paints may be put on over the old wallpaper, but this is taking some risk, as there are few wallpaper jobs which are skin tight after two or three years of wear. Once one starts to peel off the paper it is better to take it off clean. Having painted his own kitchen for several consecutive years, the writer knows that a job of that kind will please. Walls thus painted with good wall paints may be washed. In our own home we take a wet rag on a stick and use it over the kitchen walls once every two or three weeks just like we use a mop on the floor.

Cleaning up about the farm is not complete even when the wallpapering is done and the buildings painted inside and out. The fence around the house should be given attention and all the old grass and brush cleaned off the yard and burned. Give the fence a coat or two of fresh paint or whitewash. It will improve the appearance of the place 50 per cent and more. See that the gates all hang straight and look out for the porch steps. We do not know of anything that looks more slovenly than sagging porch steps. It is the easiest thing in the world for the steps to get awry, as they usually have only a few bricks for foundation, and nothing more than the freeze and thaw will cause these to get out of line.

Cleaning up and painting up, and making the many needed repairs about the house and barn, don't take much time once a person gets at it and they are worth a lot in comfort and personal satisfaction. Everyone feels happier and the neighbors all like you better if your place is kept sweet and clean. If it should happen that the neighbors haven't done their share set them a good example. Someone always has to lead in these good works.

THE MEN BEHIND THE GUN.

War Is Declared.

The United States has formally declared war on the imperial German government. By a decisive vote, both houses of congress have taken action. The next few weeks and months will be filled with big events and history will be made rapidly.

The farmers of the grain belt need a weekly paper which will give them the news of America and of the world promptly and impartially. The Wisconsin Farmer does this. The Current Events department, the editorial pages and the Family Circle Talks department conducted by Mr. Pierce will discuss the happenings of the week impartially and fearlessly, always from the standpoint of the farmer. There was never a time when it was more important that every subscriber see that his subscription is renewed promptly and that he secure as many new readers for The Wisconsin Farmer as possible.

If your subscription has recently expired or will shortly expire, send in your renewal promptly, so as not to miss a single issue, for historic happenings are occurring every day and it is the duty of every loyal American to keep well posted. Besides, The Wisconsin Farmer will continue to be the most practical and dependable farm paper published. Renew promptly and avoid missing a single number of your favorite farm paper.

Another Wisconsin Milk Strike.

On April 1st the farmers in the vicinity of Stoughton, Dane county, Wisconsin, through the officers of the Milk Producers' Association, notified the Wisconsin Farmers' Dairy Produce Company that they must have a higher price for their milk. The farmers demanded $2.40 per hundred pounds for 3.5 per cent milk for April. This is the Chicago Association price now paid by the condensery at Monroe. For several days many farmers turned back with their milk, aggregating, all told, a good many tons. The average receipts of the Wisconsin Dairy Produce Company plant were about 30,000 pounds daily. There are about 300 farmers on the membership roll of the Stoughton Milk Producers' Association. At the time this is written no settlement of the strike had been reached. A few members seemed disinclined at first to join the strike, but they were approached Sunday, April 1st, by delegates of the association, who stopped them on their way to town and asked them not to deliver their milk. There have been no serious disturbances as yet as a result of the strike.

The Wisconsin Produce Company is the outgrowth of the Robert G. Morey and A. J. Olson creameries. In the fall of 1916, Mr. Olson died and the Wisconsin Produce Company bought his and the Morey plant. Mr. Morey is said to be still interested in the Wisconsin Produce Company and the balance of the stock of the company is owned by Armour & Company, of Chicago. The company has been pasteurizing milk and shipping it to retailers in Chicago. The officers of the Wisconsin Produce Company claim they have been losing money up to the present time. One of their plants is being converted into a condensery and when this is done they expect to offer farmers an advance in price of milk. As evidence of their good faith, the Wisconsin Produce Company has offered the use of its building to the farmers with the suggestion that the farmers carry on the business if they think they can make a better profit on milk. Officials of the Milk Producers' Association, however, were not inclined to accept this offer on the grounds that it was only a temporary arrangement designed to discourage the milk producers. There is some talk to the effect that the Wisconsin Produce Company has been anxious to close down for April and May and open again in June when the Chicago scale of milk prices is down as low as $1.60 per hundred pounds.

It will be interesting to follow the Stoughton case. In the event the farmers do not get their demands they will probably organize and put up a cheese factory or make some other arrangements for selling or separating their milk. There would seem to be nothing in the conditions at Stoughton which ought to prevent farmers in that neighborhood from getting as good a price for their milk as farmers in other Wisconsin neighborhoods are getting.

Urges Universal Interest in Agriculture.

Pres. H. J. Waters, of the Kansas State Agricultural College, was the chief speaker at the Wisconsin College of Agriculture short course graduation exercises. He says that we fall into an error when we assume that the people of today are the first who have had to meet the problem of the high cost of living. Who can remember a time when there was plenty of food for everyone at a low cost and plenty of money with which to buy? The situation is that there are too few producers. States like Wisconsin, Minnesota and Michigan, with vast areas of undeveloped land, may do a great deal to correct this condition. But, as President Waters states, we deal with the matter of more farmers and greater production as though it were a problem for the farmers. As a matter of fact it is not in particular up to the farmer to hustle around and get a lot more farmers to go into the business. More producers and greater production would be of greater value to the buyers than to the farmers who have crops to sell. Reasoning along this line President Waters shows that buyers of farm products should be interested in conditions under which the farmers have to live. The problem of keeping people on the farms is as old as the problem of the high cost of living. We send people through the country idealizing country life or at least trying to do it and then we fail in very many instances towards accomplishing a great deal which will bring us anywhere near the ideals we set up. Mr. Waters says we look upon the instruction of agriculture in the schools as being for the benefit of the farmers' children on the theory that farmers' children will become farmers and he says we might just as reasonably teach blacksmithing and banking on the theory that all blacksmiths' children will become blacksmiths and all bankers' children will become bankers. It is a free country and children when they grow up will have the undenied right of selecting their own occupation. Agriculture should be taught in the schools on the theory that it broadens the vision of all children whether they live in town or in the country. It is a mistaken idea that children in the city should have the right to select their occupation, but that children in the country should be denied this right and should be expected to always live on the farm.

We believe with President Waters that the truth about both the city and the country should be taught in both the city and the country schools. Fur-

Family Circle Talks
By the Publisher.

(Continued from page 3.)

Wisconsin Farmer, on January 1, 1893, more than twenty-four years ago, Senator LaFollette drew up the transfer papers. The acquaintanceship thus begun long ago ripened into friendship. I admire the senator and respect him for the positiveness of his views and the integrity of his public and private life.

But, aside from all questions of personal friendship, I believe this is a time when we owe a debt of gratitude to Senator LaFollette, of our own state; Senator Gronna, of North Dakota; Senator Clapp, of Minnesota; Senator Norris, of Nebraska; Senators Cummins and Kenyon, of Iowa (notice how they all come from the grain belt), and the other men who attempted to stand between this country and horrible, barbaric, destructive war.

I have always been opposed to the shipment of munitions abroad, either to the allies or to Germany and its aids. I have believed these shipments should be stopped at once. Why should our great industrial institutions, our millions of peaceful workingmen, be turned over to the manufacture of that which slaughters human life, without a single thought of the right or wrong trembling in the balance? Can we call ourselves neutral in spirit when we help one side with cannon and powder, shrapnel and shell, and help the other not a bit? Is there not a humanity at stake in our attitude far greater than any principle at stake in the war itself? I cannot make my stand on this matter too plain or emphatic.

But, ask some, would you likewise shut off the exportation of food supplies? Most assuredly, I would not. Munitions destroy life; food supplies sustain life. Munitions slaughter men; food supplies keep alive women and children who would otherwise perish as horribly as the soldiers who fall on the battlefield. It is America's duty to feed the world, whether it be at peace or at war; we must continue that duty or fall abashed before the wrath of Him who made us the greatest nation in the world and who out of His abundant kindness has blessed us beyond our just desserts.

Surely, this is a time to try the souls of men and women. Let us meet it without flinching. Let us be patriots always, partisans not at all at such a time; let us be humanitarians and Americans always, sinking personal prejudices so far below the surface they will never dare to reappear until the last war cloud shall have disappeared from a horizon touched into golden splendor by the wings of the Angel of Peace.

Have I made myself plain? I hope so. I hate war. I honor the men who braved popular disfavor by seeking to keep us from war. I would stop the munition shipments abroad at once. I would do everything possible to bring about peace, a peace which should not be dispelled for hundreds of years, if ever; a peace founded on the brotherhood of man, eternal, uplifting, ennobling.

Since the above article was written war has become what the diplomatists call "an accomplished fact." The American congress, following the lead of the president and his cabinet, have solemnly declared by an overwhelming majority, that a state of war has for some time existed between the United States and Germany. It tears my heart to read this news, but in this, the darkest hour of our nation's history since the storm of civil war broke upon us, I feel that we should all acquiesce in the action of those whom we have chosen for leaders. Therefore I take my stand firmly by the side of our president. I am compelled to recognize the fact that those who are directing our ship of state through troubled seas are, without question, moved by sentiments as high as mine; they are just as patriotic, and they doubtless have information, on which to base their judgment, which is denied the rest of us. In any event, to criticize them further would be only to embarrass those whose weight of care and responsibility is heavy enough already. It matters not to me now whether I have agreed with them in all things. I believe in my heart that President Wilson has sought with all his power to avert this terrible calamity, and now that he has chosen the path, which he feels has been forced upon us, I can but follow him loyally to the end, no matter where it leads. If I were to do otherwise I would feel that I were a traitor to my country, and that I can never be, so long as there is life in me. When our country has passed through the valley of the shadow into which the hand of stern destiny seems to have led us, I shall renew my efforts to combat the war spirit and militarism and to establish the peace of righteousness. But until that time comes I shall stand by our president, our flag and our country. God helping me, I cannot do otherwise. I am sure that nowhere in all these United States will be found a more loyal body of citizens than my Wisconsin readers, no matter what their personal opinions may have been formerly. Now that it is a condition and not a theory that confronts us, I feel that their patriotism can be relied upon just as strongly as my own. It is a heavy burden which we are all called upon to bear, and my fondest hope is that the Providence which we must believe guides the destinies of men (unless we are to sink into hopeless despair) will direct us all, so that out of the fiery furnace of war somehow good may come in the end and the millennium of peace on earth and good will among men of every nationality may be hastened. It is in the hope that America's part may eventually promote the brotherhood of all mankind that I find my greatest resignation in thus bowing to the inevitable.

James M. Pierce

---

thermore, it is necessary to see to it that country people are offered as good social, school and church facilities as any other class of people, and above all, as Mr. Waters insists, agricultural education should be general. There should be a universal interest created in agriculture. We quote from President Waters' address:

The city children ought to understand that though the farmer has undertaken the most important task of any man, that of providing the world with its food, clothing, and the raw materials for its industries, he never has had and probably never will have much to say regarding the conditions under which he will discharge that task and these children should understand that the way in which society determines these conditions will in turn determine the standing and progress of both city and country. City children should appreciate the limitations of farm production and realize that conditions which they impose that are not to the best interests of the country people will not in the end be for their own best interest. They should early learn that no civilization has withstood the effect of the decay of its rural people.

The American farmer is a business man and not a mere laborer. He has invested in land equipment, and working capital an average of approximately $8,000, an investment such as fairly classes him with the business man of the town. He is entitled, therefore, to an income comparable with that of the average business man, an income which will enable him to support his family as well as to enable him to pay as much toward the support of the school, the church, roads, and the cultures of life as do the proprietors of grocery stores, drug shops, meat markets, and of other business enterprises requiring no larger investment and no greater intelligence.

If society cannot pay the price for food which will yield to the farmer a fair income, it is time society was looking into its ways of living and doing business with a view to affecting such economies as will make this possible.

President Waters does not mean that the people shall protect and help the farmer without the farmer making some effort to do something for himself. He says the farmer needs to develop great enterprises of his own and to create in agriculture great honors and bestow them upon the most worthy of his class. In too many instances the farmers themselves do not have the proper respect for their position in the world. The laborers of the country have dignified their craft by pulling together in organizations and gaining their rights by united action. The farmer should come to the point where he realizes his importance and take advantage of his opportunities.

Farmers and breeders of Marathon county have organized the Agricultural Stock Breeders' Association. It is proposed to make this association fill the same needs in the rural districts which are filled by the advancement association in the city of Wausau. Mr. H. G. Flieth was elected president and R. A. Humphrey secretary and treasurer.

Start Your Garden Now

NOW is the time to start your vegetables and flowers for transplanting—tomatoes, cabbage, parsley, cauliflower, asters, zinnias, pansies, snap dragons, etc.

If you have no hot-bed, a box 3 inches deep filled with good soil and placed in front of a window will give surprising results in the number of plants it will produce—and the cost is very small.

Greatest success in gardening is attained only by sowing reliable seeds. Northrup, King & Co.'s garden seeds have been bred and selected for trueness to type, superior quality and heavy yield. They are carefully tested for germination and are especially adapted to sowing in the Northwest.

It will pay you to be particular this year in choosing the seeds you plant. Dealers in nearly every community sell and recommend

Get My New Concrete Mixer Offer

I want ten men in every county right now to accept my special co-operative offer. It will help you obtain a Sheldon Batch Mixer at little or no cost. Let me tell you about it.

You probably need a mixer for concreting on your place—most farmers do. The Sheldon is the ideal mixer for the farm. Light and easily portable, durable, low-priced. You'll find it will prove a mighty good investment. Write for special offer.

Sheldon Batch Mixers $11.50 Up

MAKE BIG MONEY Concreting In Your Section.

You can easily earn $8 to $20 a day with a Sheldon Batch Mixer. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time. Saves labor of 1 to 4 men, according to size of job. Or, if you buy a machine for your own use, you can make many times its cost in a season by renting it to neighbors.

Improve Your Farm

Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer. Will pay for itself on first small job. Beats hand mixing a mile. And it's a lot cheaper too. Takes the backache out of concrete. [illegible] those many small improvements on the farm that you wouldn't do [illegible] which will add [illegible] to the value of your land.

Get My FREE Catalog

Tells how to build your own mixer by using the *Free Plans* which we send with our iron parts. Also shows full line of built-up machines. Two styles, hand and power. Will mix 2 1-2 cu. ft. a minute. Keeps 1 to 6 men busy. Chain drive, self-tilting dump, all parts guaranteed. Write today for catalog and special offer. Geo. C. Sheldon, Pres.

N MANUFACTURING CO., Box 7693, Nehawka, Neb.

Your Own Concrete Mixer → FREE PLANS

GET MY PRICES

BEFORE YOU BUY BE sure and get my prices! Before you buy a manure spreader (gasoline engine, cream separator or tractor) of any make, or kind, or price, first get Galloway's 1917 catalog—the biggest, most important book and greatest money-saver for my customers I ever put out! Get my proposition to you and compare it with all others; then be your own judge! We are actual manufacturers and sell direct to you from our factory. We specialize on the lines we offer. We were first to offer manure spreaders, engines, separators direct from the factory at one small profit. We have made the manufacturing and selling of these lines a life business. You can't afford to buy a manure spreader or any of the other Galloway lines until you first get our prices and our proposition. Get my prices before you buy!

UNDENIABLE PROOF!

I saved $29 by ordering a Galloway. I know it is a better spreader than I could have bought here for $125. Geo. A. Kralik, Okla. City, Okla.

I consider it equal to a prominent machine sold for $140. One neighbor who has use 1 both says he would rather have the Galloway. W. J. Cracraft, Ft. Lupton, Colo.

I saved $39. Believe I get a better spreader than was offered me here for $135. A. T. Miller, Orella, Neb.

It is as good a spreader as money can buy. I kept $35.43 in my own pocket. A team that weighs 1,850 lbs. pulls it easily. W. H. Adams, Pound, Wis.

Plans For Farm Home.

To the Editor:—As you have published several house plans, although I have had no special request, I am sending a plan which it seems to me would be just about what I would want in the line of a farm home. Both the stairway from the dining room and kitchen go down to a landing which has an outside door, also a stairs leading to the basement. The basement contains furnace, vegetable cellar and laundry, wherever drainage will permit. The landing leading to the kitchen may also have a stairs leading

HOUSE PLAN SUGGESTED BY MRS. RUSSELL.

to the bathroom, so that the bathroom may be entered without passing through the kitchen as desired. Washing facilities for men are designed to be on the concrete porch by the kitchen for summer use. The kitchen will be large enough that the family may use it for dining purposes during summer weather and in the spring and fall when our men folks cannot avoid bringing in quite a quantity of dirt. There is an eight-foot porch across the living and dining rooms, and the dining room is lighted by a bay window and a glass door looking toward the south. The pantry or store room is lighted from the landing. I am sending you a plan of the ground floor. The upstairs is to contain four bedrooms with closet and hall. If any of your readers have any criticisms or suggestions to make regarding this plan, would be pleased to have them answered through The Wisconsin Farmer. Mrs. R. E. Russell.

Ashland Co., Wisconsin.

Wisconsin Potato Industry of Recent Origin.

To the Editor:—The potato industry of Wisconsin, the most widely known potato-producing state in the Union, which now averages approximately 32,000,000 bushels annually, is of comparatively recent origin, for in 1876, or only forty-one years ago, the first carload was shipped from this state. From 1870 until 1875 Waupaca county, now the center of the potato belt, produced more tubers than were needed for local consumption, so that in 1876 six full carloads were purchased by two Waupaca merchants and shipped to points outside the state. The following year nearly thirty carloads were shipped from Waupaca, and since that time the industry has grown rapidly until the city of Waupaca alone has shipped as many as 2,200 carloads in one season.

In the early days "Early Rose" and "Peach Blow" varieties were the favorites in central Wisconsin, but they were followed in general favor by the "Peerless" and "Hebron." The "Burbank" was later found to be a greater yielder than any of these, so it rapidly grew in favor, but was later superseded by the Rural New Yorker, a round potato of great favor on the market. The acreage of this variety now equals all others in this state in the matter of total yield, and is grown almost exclusively in the central potato belt, although isolated fields of other varieties as the "Early Rose," "Early Ohio" and "Burbank" are found.

The greatest crop in this state was grown in 1914, when about 36,000,000 bushels were harvested, over one-fourth of this amount coming from the three central counties, Waushara, Waupaca and Portage. During the past decade the newly developed upper counties have come to realize the benefits resulting from potato growing and with the help of their agricultural representatives have set out to overtake the older potato-growing counties. Judging from the number of prizes won at state and national potato shows by the northern farmers, the experienced potato growers of central Wisconsin must put forth renewed effort or be relegated to a secondary position. If the northern counties once succeed in gaining a reputation for better quality tubers they will not rest until they have also displaced the older, central counties in the matter of quantity also.

There is only one way in which the potato crop can be improved and that is by planting better seed, combined with better care; as potato growers all over the state are working for these essentials, we may rest assured that, no matter which county may eventually be classed as the potato county, the quality of potatoes throughout the state will be greatly improved. D. R. Burnham.

Experience With Varieties of Oats

To the Editor:—We have in Wisconsin, as nearly everybody knows, a number of varieties of oats developed by the agricultural department of the University of Wisconsin. Besides experimenting on their farm at Madison they have plots for experimental purposes in different parts of the state. We have a tract of land set aside for this purpose and have seeded this with different grains for this purpose.

Oats being one of the crops we are most interested in we paid most attention to this grain in order to find the variety best suited for our farm.

It is understood that a variety of oats for our particular farm, which is in a rich state of fertility and rather low land, however well drained by tiling, may not be the best variety for other farms where the conditions are different, hence this fact seems to be self-evident that every farmer must try out one of the different varieties himself in order to find the one most productive on his farm, but may learn to some extent by the experiences of others if interested enough to find out.

We seeded Wisconsin pedigreed seeds, numbers 1 to 8 inclusive, for several years and found number 1, 4 and 5 most satisfactory. In order of production No. 4 was first, No. 5 second and No. 1 third. We finally eliminated No. 1 and 5 and now seed No. 4 only.

The reason No. 4 produces better on our farm is because of its ability to stand up where No. 1 will lodge. It has a strong stem and seems to be a disease-resisting variety.

We wish to state, however, that we have seen No. 1 oats seeded in this vicinity on higher land and believe that that is the best oats for such land because it produces remarkably well and is a far better oats for commercial purposes than either 4 or 5 on account of its having a thin hull.

From our tests and observations we have reasons to believe that every farmer will find one of these varieties suitable for his farm.

No. 1 for highlands, No. 4 for lowlands and No. 5 for either highland or lowland. Otto Drews.

Supt. Manitowoc County Farm.

The Short-Horn in America.

The April 1st number of The Short-horn in America, the quarterly publication issued by the American Short-horn Breeders' Association, is now being mailed. So great has been the call for this beautiful and instructive publication since the first number a year ago that the April 1st edition was increased to 30,000.

Judging from the character of the matter and the illustrations, the April 1st number must be regarded as the most useful one yet issued, though they have all been of a high order—a distinct compliment to the Short-horn interests.

The best-known Short-horn authorities are contributors to this publication and all phases of the interesting business of breeding, growing, showing and marketing Short-horns is ably discussed by men of intelligent experience and observation. The animal husbandry department of numerous agricultural colleges and experiment stations make use of The Short-horn in America for text-book purposes.

We recommend all who are interested in acquiring further knowledge of the Short-horn and its relation to live stock improvement to address the American Short-horn Breeders' Association, 13 Dexter Park Ave., Chicago, for this entertaining and instructive magazine. It is free for the asking.

R. Baker,
Assistant Secretary, Wisconsin Live Stock Breeders' Association.

Although dairying is predominant in Wisconsin, beef cattle men are rapidly taking their "place in the sun." According to the official government estimate, the total number of cattle other than dairy cows in Wisconsin in Janaury, 1917, was 1,340,000, valued at about $40,000,000. While a part of this total represents bulls and immature stock of the dairy type, the larger per cent of the figures can be credited to cattle destined for beef purposes.

PAIGE

The Most Beautiful Car in America

The Final Test of Quality

IT IS a matter of record in fifteen of the principal cities that Paige used cars bring a higher price—proportionate to first cost—than any other American automobiles.

And here, after all is said and done, is the final test of quality.

A used car has been "through the mill." Its motor and all of its working parts have been subjected to constant strain.

Its "finish" has been knocked off—*if it will come off at all.*

Its gears, its rear axle and its transmission have endured the punishment of day-in and day-out pounding. All of its weakness is plainly evident—and likewise its *strength.*

The used car either stands before you a broken down, dispirited "has been"—or a strong, robust champion of many battles—ready and eager for all the service that man can give it.

That, we repeat, is the final test of quality.

And in this test the Paige stands supreme. *After fifteen, twenty-five, thirty-five thousand miles of service, there is still enough GOODNESS left in a Paige to command the record price in used car markets.*

Frankly, now, is there anything that we could tell you about our product that would be more convincing? Could you have any better guarantee that a Paige is all that we claim it to be—all that you could possibly expect it to be?

As to the selection of a model, this is simply a matter of your own personal requirements.

In our line there are two seven-passenger cars, a five-passenger car and two roadsters. You, alone, can make a choice, but please remember that you can't make a *mistake.* For all of these models are Paiges—blood brothers of the same strain. That is the really important thing

But don't lose any time. See your Paige Dealer today. Let him give you the kind of demonstration that will definitely settle your automobile problem, and place your order while we can still promise early deliveries.

Expert Heating Engineers will Tell You - Free - What Type of Heating System will be Best for Your Home

L. J. MUELLER FURNACE CO.,
204 Reed Street, Milwaukee, Wis.

Gentlemen:

I intend to { build a new house / remodel my house / install a heating system } this spring or summer. I will have_____rooms to heat, _____downstairs and_____ upstairs. There are_____outside doors and_____windows. Please send me your floor plan charts on which I can indicate arrangement and dimensions of rooms. I am now heating my house with_____. I have been considering a { warm air / hot water / steam / pipeless } system.

It is understood that sending in this coupon does not obligate me in any way.

Name_____

Postoffice_____

State_____

NO one but a heating expert who combines scientific knowledge with practical experience can determine with absolute accuracy whether warm air, hot water, steam, vapor or a pipeless furnace will heat your house most satisfactorily and economically.

The selection of the type of heating system best adapted for your house means all the difference between comfort, convenience, health, and discomfort, trouble and heavy expense. There is no necessity of your taking a chance. Just what type of system will be best adapted for your conditions can be determined without any possibility of a mistake. All you have to do is to give our heating engineers the required information. Without putting you under the slightest obligation to us, they will tell you what system is going to give you the best service. Their advice will be entirely unprejudiced. They have no interest in recommending any one type of heating system, because we make all types—warm air, hot water, steam, vapor and pipeless furnaces.

MUELLER HEATING SYSTEMS

Determining which type is best is merely a matter of figuring the number of cubic feet it is necessary to heat, taking into consideration exposure, location, glass surface, construction, ventilation and other important factors. Only the heating expert can do this with accuracy.

Every one of the 119,000 Mueller Heating Systems in use is giving perfect satisfaction, because each is of the type and size exactly suited to the house or building in which it is installed. For more than 60 years we have been manufacturing heating systems. The benefit of all we have learned in all those years is at your disposal.

All you have to do is to clip the coupon, fill it out and mail it in. This will not obligate you in any way. You will get just exactly what this advertisement offers you—the advice of unprejudiced experts, who will tell you with absolute certainty what type of heating will be best suited to your house—how large a heater you will need, where to place it in your basement.

You need have no hesitation about mailing the coupon. It will take you only a moment—clip and mail it now, before you forget it.

An efficient warm air heating system costs less to install than a steam or hot water system. It provides heat quicker than any other system and is easy to regulate. With it you can keep your rooms comfortable even in the coldest weather.

Hot water, steam or vapor systems are recommended where the size and number of rooms to be heated and other conditions make their use most economical and desirable. The correct design and superior construction of Mueller Heating Systems have made them standard throughout the United States.

The Mueller Pipeless Furnace has exactly same construction as the old reliable Mueller line, but without pipes or flues. Ideal for installing in old or new houses and buildings with small or partial cellars. Will heat whole house comfortably, dependably, cleanly and economically from one register. Saves 30 per cent in fuel.

Makers of Heating Systems of all Kinds since 1857

A Show Herd Which Produces.

(Continued from page 1.)

by the experienced breeder. Learning these things at first hand will develop in the boys a fund of knowledge superior to that of many an older man.

About 120 acres of the farm are under cultivation, the balance being used for pasture and wood lot. About thirty acres are put into corn for ensilage each year. The rotation followed is alfalfa, clover, corn, oats or barley and some timothy. The manure from the barn is hauled to the field as it is produced and the fertility of the soil kept nearly stable through this. About every three years or better each acre has been treated to a heavy application of manure. The cows receive grain the year around and each cow has the individual attention that is necessary for success.

The cream from the farm is sold to Chicago at a fancy price and the skimmed milk kept for the feeding of calves and a few hogs.

The Ayrshire is by far the youngest of our dairy breeds, but she has perfection of dairy type and the possibilities for her usefulness to the dairy world are unlimited. Testing and feeding of individuals for production has not been carried on with her in the same large measure as has been the case with our other dairy breeds. Future breeders will no doubt soon enter this phase with the same spirit that they have shown in the breeding of a perfect type of dairy animal. The next few years will undoubtedly show some creditable records made.

The Ayrshires on the Seitz farm have in their favor the points that go to make up a high-producing animal. The cows are of the type that are known as the grand big cows with large udders, good-sized teats and large and spreading milk veins. In the frame work they show exceptional points as to depth and width through the chest and length of body and width across the hips. The beauty of the Ayrshire emphasized by the small, bony head, the broad muzzle, the large, full eyes and the upright gracefully curving horns is present in a superior way in the Seitz animals. The cows have plenty of width between the ribs showing their capacity for handling large amounts of feed. The ability of the Ayrshire to consume large amounts of coarser food is a great point in her favor. She will milk rather persistently on almost any kind of roughage, but with her, as with any other cow, the yield is dependent upon the amount of nourishment she can gain from her feed.

In the Seitz herd the beautiful and the useful have been combined in a manner that "fills the eye." Incidentally the Seitz cows have also filled the pocketbook and in this case the Ayrshire has well earned her title of "perfect cow," the name by which she is known throughout the Ayrshire world. She has certainly made good on this Wisconsin farm.

BARGENOCH GAY CAVALIER, CHAMPION AYRSHIRE BULL, MINNESOTA, 1911.

Big Interest In Hog Raising.

REMARKABLE as the increased interest in hog raising has been during the past few years in Wisconsin, greater progress is promised. This will be due to better skill in breeding and managing, as well as in improving systems of marketing. According to the last official census there were fourteen hogs on every Wisconsin farm. In 1916 Wisconsin farms produced about 2,060,000 head of swine, valued conservatively at more than $29,000,000. To increase the pork output in this state, partly through better breeding, which enables farmers to get younger animals in prime market shape and generally advance the quality and demand for this kind of meat, the recent state swine conference at the college of agriculture was held.

Among many of the startling facts which showed Wisconsin's place as a contributor to the national pork barrel, these especially interesting ones were emphasized at these sessions:

The five principal pork-producing counties are Dane, Grant, Green, Rock, La Fayette and Walworth. National swine breed associations have more than 500 active members in the state, while at least 1,200 owners of Wisconsin hogs have their animals registered in official herd books.

It Proved Itself

The Greatest Car That's Built

Men ask why we race the Super-Six. Why we win so many records in hill-climbs and endurance. They say they don't want racers, and don't care for super-power.

Of course you don't. But you want to know which car excels when you buy a car to keep. And the only way to compare cars is through maximum performance.

The Super-Six is a light Six. In size and looks there are many Sixes like it.

But a Hudson invention—patented—added 80 per cent to this motor's efficiency. On that account, the Super-Six has won all the worth-while records. In a hundred tests it has out-performed all types of rival motors. So today it stands unquestioned as the greatest motor built.

It holds the speed records for stock cars. It holds the chief endurance records. It won the world's greatest hill-climb.

It did that because friction is almost ended in the Super-Six. Friction is what limits performance. It wastes the power, and wears the motor parts.

By minimizing friction the Super-Six invention has almost doubled endurance. And that is what you want in a car.

In Hudsons Only

The Super-Six motor is found in Hudsons only. It has made the Hudson the largest-selling fine car in the world.

The Hudson Super-Six comes in body styles which mark the very pinnacle of luxury. It comes this year with a new gasoline saver. With a patent carburetor, self-adjusting to every engine speed.

The Hudson Super-Six now stands supreme. It probably always will. Prove these facts before you buy, else you will have regrets.

FEDERAL DOUBLE CABLE BASE TIRES

The quality proof of a tire is in its service. And country driving is the supreme test.

Federal Tires are built with an exceptionally tough tread, which not only yields long service but gives greatest traction.

They are safe tires, too. For in the base are built four heavy steel cables of exceptional tensile strength. These cables hold the tire securely to the rim under all conditions. Yet it slips off easily when required.

Made in white Rugged and black Traffik tread and sold by leading dealers everywhere.

ELECTRIC LIGHT *for* YOUR FARM

YOU can have brilliant light in your home, your barns and buildings — do away with matches, lanterns, lamps and fire danger. Ingeco Electric Lighting Systems are inexpensive to install and operate, simple, compact and reliable. Require little attention — give clear, steady light without flicker.

Tear out this ad, write your name and address on margin and mail to us for interesting booklet.

WORTHINGTON PUMP AND MACHINERY CORPORATION
176 Holthoff Place Cudahy, Wis.
(Suburb of Milwaukee)

INGECO LIGHTING PLANTS

Saving the Hay Crop

Flying Dutchman One-Man Hay Loader

picks up lightest swath or heavy windrows without adjustment. Yielding deck prevents clogging; no trouble-making cams, drums, chains, sprockets, rope or gear wheels. All steel frame; light draft.

THE MOLINE LINE

Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Sowers, Listers, Manure Spreaders, Mowers, Plows (chilled and steel), Reapers, Scales, Seeders, Stalk Cutters, Tractors, Farm Trucks, Vehicles, Wagons.

Moline Cylinder Rake and Tedder is easily adjusted for either hay or beans. Cylinder raised or lowered without driver leaving seat. Teeth may be set at any angle. Both wheels supply power. Built almost entirely of steel. Quickly changed from a rake to a tedder.

Ask your Moline dealer about these Hay Tools or write us for illustrate literature.

Moline Plow Co.,
Dept. 30 MOLINE, ILL.

FARM MECHANICS

AUTO, Farm Engine and Farm Machinery Ailments Diagnosed and Remedies Suggested in this Department.

Questions and Answers.

Operating Horn From Magneto.

Do you think that the magneto of my 1915 Ford car is strong enough to blow a vibrating horn that I am now operating with six dry cells? If so, please tell me how to wire it.

Answer.—Your magneto should operate the horn successfully. From the magneto terminal on the coil box run a wire to the horn; from the horn run a wire to the push button; and then run a wire from the push button to the frame of the car.

Clutch Slips.

I have a 1912 Ford car that does not seem to have much power when it comes to climbing a hill. It runs fine on level ground. It has good compression, and will go twenty miles on a gallon of gasoline. Is it possible that the clutch is slipping, or what is the trouble?

Answer.—The clutch is probably slipping. Adjust the screws in the clutch fingers in equally a half turn or more. If the clutch is badly worn it would be best to get a set of new clutch disks.

Moth Balls in Gasoline.

I enclose a clipping, from a farm magazine, recommending the use of twelve moth balls in fifteen gallons of gasoline. Can you give any light on the subject in your Farm Mechanics Department? Of what good are the moth balls, and what does the good come from?

Answer.—Moth balls are said to considerably increase the power of gasoline. They make the fuel more volatile. A few years ago a compound called "Zoline" was discovered. It was made principally of moth balls and water. It worked fairly well in auto engines, but has not come into use.

Pumping Water.

I am sending you a plan of a water system that has failed to give satisfaction. I cannot understand why it should not work. It is run by a pump jack without a pump head. The jack is fastened to the plunger. More water flows out of the top than out of the two pipes that lead to the supply tank. It is eighteen inches from the top to the two pipes. All the pipes are one and one-fourth inches. What is the trouble?

Answer.—This outfit is illustrated in Figure 1. R is the pump rod to which the jack is fastened. Water in

FIGURE 1 FIGURE 2.

motion tends to move in a straight line. Since the outlet pipes, BB, are at right angles to the flow of the water, the water tends to rush past them and flow out at the top of A. The way out of this difficulty is to make the capacity of the pipe above the outlet pipes somewhat greater than the capacity of the pump cylinder. Or the upper part of the pipe may be arranged as shown in Figure 2. The reservoir above the outlet pipes will then fill during the pumping stroke; as soon as the idle stroke begins the water will begin to run down and out at the outlet pipes.

Columbia Batteries

As with your motorboat, so with your tractor, auto or stationary engine—for dependability use Columbias.

What Our Dairymen Are Feeding.

A Few Interesting Chapters From the Note-books of Men Who Are Testing Dairy Cows and Urging Greater Production.

[Editor's Note.—The Wisconsin Farmer has been receiving some very interesting letters from cow testers, giving some important light on feeding under the conditions which have existed the past winter and spring. Below we give a few of these letters.]

Dairy Rations.

To the Editor:—There has not been very much difficulty in obtaining feed in this section until now. All the different kinds of feeds were, of course, not to be had, and to that extent the rations fed to dairy cows had to be suited to the feeds to be had. Large quantities of feed, mainly bran, brewers' grains, gluten feed, oil meal, dairy feed, mill screenings, malt sprouts, distillers' grains, hominy and different kinds of other commercially mixed feeds were bought. The rations were always calculated according to the feeds on hand and the prices of the feeds that had to be bought to supplement the feeds on hand.

I always calculate a ration with the object of securing the greatest net profit and still feed a balanced ration. It is impossible to say which is the best ration, because the circumstances vary so greatly among any number of farms. But the following is an economical ration under an abundance of farm-grown feeds: Ground oats, twenty-five pounds; ground corn, twenty-five pounds; bran (wheat), twenty pounds; gluten feed, distillers' grains, malt sprouts or brewers' grains, twenty pounds; oil meal, ten pounds. Also this one: Bran (wheat), forty pounds; ground oats, thirty pounds; ground corn, twenty pounds; oil meal, ten pounds. When considerable feed has to be bought, the following would make a good ration: Wheat bran, thirty pounds; brewers' grains, or distillers' grains; gluten feed, malt sprouts, thirty pounds; ground oats, twenty pounds; ground corn, fifteen pounds; oil meal, five pounds. The more farm-grown feeds in the ration the cheaper it is generally, unless under unusual conditions, when feeds that have to be bought are cheap and farm-grown feeds high.

Right now the feeds that have to be bought are especially high, and unless there is a great insufficiency of farm-grown feeds, I am not advising the purchase of any feeds, because bran, for instance is $38 to $40 here now, and milk went down from $2.40-$2.50 to $1.80-$1.90. In my estimation, a man would make more money feeding only farm-grown feeds rather than pay such high prices, if the farm feed is on hand. For instance, I recently advised men not to buy bran, but to feed two-thirds oats and one-third corn, because he had enough of them.

Every year there is around here a shortage of pea silage for those who depend upon raising canning peas entirely for their succulent feed. This year the shortage is more acute, because the canning companies keep more to feed their sheep. One man's milk dropped 25.4 pounds in one month after the silage was gone.

I have also found farmers are not making any more money in this year of high prices, due to the high prices, than in previous years, because in three months last fall, feed that had to be bought advanced 50 per cent and butter only 38 per cent. By now feed has advanced 100 per cent and butter only 62 per cent.

C. F. Wehrwein,
Official Tester, Columbia Cow-Testing Association.

Depend on Grains.

To the Editor:—Central Wisconsin dairymen have probably suffered more than some others because of the lack of farm feeds. We are obliged to depend more on grains because of a poorer grade of roughage. Feeds in this vicinity during the past winter have been purchased largely through equity societies. Bran, gluten, corn, with some hominy and oil meal have been most extensively purchased. When farm feeds are plentiful, corn, oats, and oftentimes some barley, supplemented with bran and oil meal, or both, would be considered an economical ration here. A ration of bran, gluten and hominy, fed in equal parts, with variations to allow for the introduction of roughage, is fed extensively, and some dairymen feed some of the well-known prepared feeds, and with very good results. However, some of these feeds result in an increased cost of production, especially in years when we have plenty of farm feeds.

J. Williams,
Tester, Wood County Association.

Buy High Protein Feeds.

To the Editor:—Quite a number of our members bought their feed at low prices last fall. Of course, more would have done so had they had any idea that feeds would reach the present high prices. It is safe to say that the majority will stock up with feed this next year in the early fall.

I personally do not believe that a well-balanced ration can be had from farm feeds unless a large amount of alfalfa can be raised and as yet alfalfa has not been very successfully grown here. We always figure, when buying feeds, to get those with high protein, as the farm feeds contain such a large amount of carbohydrates and fats. I find that the first and most important thing is to get the ration balanced. This means a purchase of such high protein feeds as dried grains, gluten feed, bran or oil meal. This winter the range of prices on all these feeds has been high, especially on bran. Bran in a ration lightens the feed and is a splendid conditioner, say one part of bran to three or four parts of other feeds. Otherwise I do not find bran to be a great milk producer, especially if the ration is built around it. We have the farmers' elevator here and other dealers also ship in feed in car lots, the farmers getting the feed direct from the car. The farmer can save money on his feed bill in this way and at the same time the dealer can make a small profit. In spite of the high cost of feeds the members of our association are feeding as heavy as usual and, though the profits may be a little smaller, the cows will make up for it next summer when they get on grass. Most of our members believe that a cow should make a profit on the costlier food, and if she doesn't they do not believe she is worth saving for the cheaper feeding time. I see The Wisconsin Farmer a good deal at the homes of members. F. L. Cuenot.
Official tester, Alto Ass'n, Fond du Lac county, Wisconsin.

Less Grain Less Milk.

To the Editor:—In previous years bran and some oil meal were about the only commercial feeds purchased in this section and only a few of our best dairymen used the oil meal. This year there was a great scarcity of clover and alfalfa hay and protein feeds were in demand to keep up the milk flow. Several of the farmers bought a supply of distillers' dried grains and bran early, and with the addition of oil meal and farm grains they were able to mix a good diry ration at a cost of about $1.50 per hundredweight. Such a ration consisting of ground corn-and-cob meal, ground oats, dry distillers' grains, bran and oil meal gave good results when the proportions were varied to suit the class of roughage on the farm.

Other farmers in our territory have unfortunately neglected the purchase of feeds until the sky-rocket prices came on us. Then we found by analyzing the different feeds that the feeds of high protein content were the cheapest source of protein and accordingly such feeds were recommended, but fed on a lower proportion to the pounds of milk produced. A few farmers quit grain feeding entirely and, of course, their cows responded quickly by a corresponding decrease in milk production. R. N. Root.
Official tester, Westby, Vernon county, Cow-Testing Ass'n.

Oil Meal as Conditioner.

To the Editor:—I am glad to say that farmers around Eagle Point and Bloomer, Chippewa county, have been supplied with plenty of hay and silage of good quality. To supplement these feeds we have used some oats and a little corn. I advise farmers in our cow-testing association to get together and buy some dried brewers' grains. We bought three or four carloads through the local dealers in October at $24 to $25 per ton and a carload of bran was also purchased at that time for $24 per ton. Our average grain ration is composed of forty pounds of bran, forty pounds of dried brewers' grain and twenty pounds of ground oats. Some oil meal has been fed to individual cows which were especially heavy milkers and had begun to run down in condition. All who tried this

(Concluded on page 19.)

"The Farmers are the Founders of Human Civilization"
Dan'l Webster
(Daniel Webster)

THIS is as true of the farmer now as it was in early days. And as builders of a great public utility, the Firestone Organization is a big factor in this vital work. Progress depends upon transportation and among its most valuable factors are

Firestone
TIRES

Wherever the road leads, whatever the work requires, your machine will ride safest, easiest, best on Firestone equipment. Firestone rubber is selected and prepared to give tough, resilient service; the service that means long, comfortable riding. And many plies of Firestone fabric, of a quality exclusively Firestone, mean big gain in strength and stamina.

On every Firestone Tire there is stamped the name of the founder and present head of the business, Mr. Firestone. And when a man puts his name on a product he gives a pledge to the public which only quality can make good.

The Tractor To Buy

EAGLE

YOU want a tractor that not only gives you dependable traction, but belt power for your silo filling, threshing, etc. The Eagle is an all-round engine, as well as tractor. Has the famous two-cylinder engine with valve-in-head motor. The outgrowth of years' experience in motor and tractor manufacturing. Runs as well on **kerosene** as gasoline. Ideal for medium-sized farms. Simple in construction; all parts easily accessible. Easy to operate. 8-16 H. P.; 12-22 H. P.; 16-30 H. P. Sold under an absolute guarantee. For complete details send for our descriptive catalog today.

EAGLE MFG. CO. 640 Winnebago St., APPLETON, WIS.

Farm Hands Wanted

Western Canada Farmers Require 50,000 American Farm Laborers AT ONCE

Urgent demand sent out for farm help by the Government of Canada. Good wages. Steady employment. Low railway fares. Pleasant surroundings. Comfortable homes. No Compulsory Military Service. Farm hands from the United States are absolutely guaranteed against Conscription. This advertisement is to secure farm help to replace Canadian farmers who have enlisted for the war.

A splendid opportunity for the young man to investigate Western Canada's agricultural offerings, and to do so at no expense.
Only those accustomed to farming need apply.

For particulars as to railway rates and districts where labor is required, or other information regarding Western Canada, apply to

Geo. A. Hall, 123 Second St. Milwaukee, wis.

Hereford Steers Make Good Gains

Experiment at Iowa Station With Self-Feeder—Gains Made on Corn and Corn Ensilage With Addition of Oil Meal and Alfalfa.

A MOST interesting and instructive experiment in cattle feeding was started at the Iowa Experiment Station last November. It involved the feeding out of five groups of Hereford steers that averaged approximately 950 pounds when the experiment started. On March 21st these steers had been on feed 120 days and the event was celebrated by the assembling of some 300 stockmen, who spent the day inspecting these cattle and studying the manner in which they were fed. This investigational work is under the supervision of Profs. W. H. Pew and John M. Evvard. These men have, for a number of years, been carrying on extensive scientific experimental work relating to feeding problems. The questions they have already put to farm animals have elicited instructive replies, and if the feeding principles that have been worked out by these scientists could be put into practice on the farms of the central West, it would unquestionably increase stockmen's profits millions of dollars.

In the particular experiment under consideration at the present time one group of steers were fed shelled corn in a self-feeder. In other words, they had corn before them all the time. In addition, they received a full feed of corn ensilage twice daily along with two and one-half pounds of linseed oil meal and two pounds of alfalfa hay per head daily. What did they do with this feed? They made an average daily gain of 3.50 pounds. While not rolling fat, they were pronounced by Messrs. Cross and Stevens, of Chicago, to be within 40 to 50 cents per hundred pounds of the top of the market. On the average these steers consumed 14.8 pounds of corn daily and 34.4 pounds of corn silage. It required practically thirty days to get them on full feed and at the end of 120 days they were eating eighteen pounds of corn per head daily and twenty-five pounds of ensilage. For every hundred pounds of gain made by these steers they required 424 pounds of shelled corn, seventy-one pounds of oil meal, 980 pounds of ensilage and thirty-seven pounds of alfalfa hay. Exclusive of the value of the pork made by the hogs in this lot, each hundred pounds of increase cost $11.98, computing corn at 90 cents a bushel, oil meal at $46 a ton, corn silage at $6.50 a ton, and alfalfa hay at $18 a ton. The steers were bought at $7.25 a hundred and were valued at $11.68 per hundred at Ames after being fed 120 days. After deducting the estimated cost of marketing and crediting the gains on hogs following the steers, there was a profit of $46 per head. To break even, so as to cover simply the cost of feed, these steers would have to have sold at $8.30 per hundred pounds. You will see that the large profit per steer is due to the fact that there is a big spread between buying and selling price.

A similar group of steers were full fed twice daily on exactly the same feeds used in the group that was self-fed. These steers made an average daily gain of 3.17 pounds as against 3.50 pounds in the self-fed lot. They consumed an average of 13.4 pounds of corn, 2.5 pounds of oil meal, 34.1 pounds of ensilage, and 1.3 pounds of alfalfa hay daily. They had practically the same amount of shelled corn as the self-fed lot and their gains cost, without crediting the hogs with food picked up, $12.45 per hundred pounds as against $11.98 in the self-fed lot. They were rated by Cross and Stevens at $11.70 per hundred pounds, whereas the self-fed lot were given a rating of $11.68. After crediting the gains on the hogs and deducting the shipping expenses, each steer in this lot showed a profit of $43.43 as the result of his 120-day feed. This was $2.67 per head less than the self-fed lot, although the steers weighed the same in the beginning.

The third group of steers was carried for 120 days on a half ration of corn, together with the same amount of oil meal and alfalfa hay as the other lots. These were allowed all the ensilage they would consume. Although these steers only received 6.7 pounds of corn daily on the average, they made a gain of 2.83 pounds for the entire feeding period. The ensilage consumed by this lot ran up to an average of 44.9 pounds per head daily. For each hundred pounds of gain these steers consumed 236 pounds of corn, eighty-eight pounds of oil meal, 1,585 pounds of corn ensilage and forty-five pounds of alfalfa hay. Their value was placed at $11.55 per hundred pounds and the profit per head, after deducting all marketing expenses and crediting them with the gains made on hogs, was $45.18. The gains on these steers at current market prices for feed cost $11.39 per 100 pounds.

The record made by the fourth group of steers will surprise experienced feeders. They only received an average of 3.3 pounds of corn daily, 2.5 pounds of oil meal, 50.7 pounds of ensilage and 1.3 pounds of alfalfa hay, but their gains from this ration show an average of 2.81 pounds per day. It required only 119 pounds of corn, eighty-nine pounds of oil meal, 1,806 pounds of silage and forty-six pounds of alfalfa hay to make 100 pounds of gain on these steers. The cost of this feed was $10.25 per 100 pounds of gain. Here we have gains made at the lowest cost of any of the groups. Their

Group number	I	II	III	IV	V
Average final weight	1,365	1,328	1,292	1,290	1,359
Average daily gain	3.50	3.17	2.83	2.81	3.46

Profits per steer:					
Excluding hogs	40.53	39.29	41.47	44.40	36.49
Crediting feed saved by hogs	43.99	41.46	43.02	45.12	39.60
Crediting hog gains at $12	46.00	43.43	45.18	46.87	41.66

Prices of feeds: Shelled corn, 90 cents; linseed oil meal, $46; corn silage $6.50; alfalfa hay, $18; rock salt, $1 per hundredweight.

*Chicago value minus 70 cents for shipping.

Group I.—Shelled corn self-fed, corn silage full-fed twice daily, linseed oil meal two and one-half pounds, and alfalfa practically two pounds per head daily.

Group II.—Shelled corn hand full-fed twice daily, otherwise the same as Group I.

Group III.—The same as Group II excepting that they receive one-half as much corn.

Group IV.—The same as Group II excepting that they receive one-fourth as much corn.

Group V.—The same as Group II excepting that the silage is entirely replaced with alfalfa hay.

Make this Chart your guide

Look for it on your dealer's wall

Your oil runs low. You stop for a fresh supply.

You now come to a vital question. What oil will the dealer pour into your oil-reservoir? Will it be just "oil"—or will it be the correct lubricant for *your* engine?

Among thousands of dealers this is what happens:

The dealer recognizes the make of your car—and the year's model. He runs his finger down the Vacuum Oil Company's Chart (shown above in miniature) until he finds your car's make and model. Then he supplies you with the grade of Gargoyle Mobiloils specified for your car by the Chart. This oil will effectively seal your piston rings against power-waste, gasoline-waste and oil-waste.

Why are thousands of dealers placing such reliance in this Chart?

Experience has taught them that something like 50% of all engine troubles are due to incorrect lubrication.

They realize that scientific lubrication is a problem for specialists. Since the dealer has neither time nor equipment for studying this intricate subject he draws on the experience of a recognized authority.

That is why you find on his walls the large Chart of Recommendations, issued by the Vacuum Oil Company.

If you inquire about the Chart you will find this:

The Vacuum Oil Company for 50 years have specialized in scientific lubrication. Today their world-wide leadership in lubrication matters is unquestioned in scientific circles.

For years their Chart of Recommendations has been recognized as the only standard guide to correct automobile lubrication.

In keeping this Chart up to date, each new model of every automobile is carefully analyzed. This work involves lengthy and painstaking engineering study by the Vacuum Oil Company's Board of Engineers. The recommendations of this Chart are proven correct by repeated practical tests.

But nothing has given dealers such faith in this Chart as their experience with the oils themselves. For no one knows better than the dealer how difficult it is to secure efficient lubrication—and how much efficient lubrication means.

Write for new 56-page booklet containing complete discussion of your lubrication problems, list of troubles with remedies, and complete Charts of Recommendations for Automobiles, Motorcycles, Tractors and Marine Engines.

GARGOYLE

Mobiloils

A grade for each type of motor

In buying Gargoyle Mobiloils from your dealer, it is safest to purchase in original packages. Look for the red Gargoyle on the container. If the dealer has not the grade specified for your car, kindly write our nearest branch, giving dealer's name and address.

VACUUM OIL COMPANY Rochester, N. Y., U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

Domestic Branches: Detroit New York Philadelphia Minneapolis Boston Chicago Indianapolis Pittsburgh Kansas City, Kan. Des Moines

Correct Automobile Lubrication

Explanation: — The four grades of Gargoyle Mobiloils, for engine lubrication, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

In the Chart below, the letter opposite the car indicates the grade of Gargoyle Mobiloils that should be used. For example, "A" means Gargoyle Mobiloil "A", "Arc" means Gargoyle Mobiloil "Arctic", etc. The recommendations cover all models of both pleasure and commercial vehicles unless otherwise noted.

selling price was $11.48 and the profit per steer was $46.87. This is the largest net profit of any of the groups.

In another lot of steers the silage was cut out altogether and alfalfa hay substituted. The steers were fed the same amount of oil meal as the other lots and they consumed an average of 18.1 pounds of corn daily and, in addition, 10.4 pounds of alfalfa hay. It required in this case 523 pounds of corn to make 100 pounds of gain, seventy-two pounds of oil meal and 301 pounds of alfalfa hay. At current market prices it cost $12.77 for 100 pounds of gain. This is the highest cost of any of the lots. The steers were valued at $11.63 per 100 pounds, being just a little lower in finish than the full-fed silage steers. The profit on these steers was $41.66 per head.

Four hogs followed each group of eight steers and in determining the cost of making 100 pounds of gain in each group credit should be given for the gains made by the hogs or at least for that part of the gains that was made on feed-lot waste. This is a factor of considerable importance when the present price of pork is taken into account. For example, gains on the self-fed steers that cost $11.98 per 100 pounds were reduced to $10.68 after crediting the steers with the value of their waste when marketed in the form of pork. The steers fed a full corn ration by hand cost $12.45 per 100 pounds, but this was reduced to $11.36 after credited with the hog gains made on their waste. As the corn ration is reduced the gains made by hogs are naturally less because we find that the group fed a half corn ration cost $11.39 per 100 pounds and this was reduced to $10.30 when they were credited with the profits from the hogs. In the case of the steers fed only one-fourth of a corn ration the gains on hogs amounted to very little. The cost of 100 pounds in the case of these steers was $10.25 and even after they were credited with the gains on hogs the cost was still $9.52. In the alfalfa-fed steers the cost of 100 pounds of gain without the hogs was $12.77, but crediting them with the gains on the hogs reduced the cost to $11.53.

The ensilage fed to the various groups of steers was made from corn yielding forty-five bushels per acre or nine tons of ensilage per acre. This would mean that each ton of ensilage contained five bushels of ear corn. The steers in all the lots had the run of a small yard and they had access to an open shed. They received no attention that could not be given on any ordinary farm. The results given above are embodied in the table on page 12.

SOME GOOD BOOKS.

Something For the Poultry Breeder, Stockman and Gardener.

More and more the successful producer is looking for information that is obtained outside of his own experience, and this being the case, we are pleased to call attention to a few interesting and instructive volumes that have just come from the press. One, entitled "Judging Farm Animals," is by Charles S. Plumb and is an illustrated work comprising nearly 600 pages. It deals with all classes of live stock excepting poultry, and the text is illuminated in such a way so that it is most readable, and the information it contains is not smothered with technicalities. This volume sells for $2.25 and it should be in the library of every stockman, particularly in those cases where there are boys and younger men who are eager to learn.

A second volume is entitled "Poultry Breeding and Management." It is by James Dryden, head of poultry husbandry at the Oregon Agricultural College. This also is an illustrated work and it deals with every imaginable phase of poultry husbandry. Special attention is given to the question of rations for the different classes of poultry, so that even a beginner could take this volume and attain a fair degree of success right from the beginning by following its teachings. Packing and marketing of eggs and fowls, the judging of fowls as well as house construction, feeding for eggs, the care of chicks, poultry diseases and scores of other topics are treated in this volume in an explicit manner. This book sells for $1.60.

A third book that has just come from the press was written by Bliss S. Brown, professor of hoticulture in the University of Maine. The title is "Modern Fruit Growing." All classes of fruits are dealt with, and ways and means of marketing through the various selling agencies are outlined in detail in this volume. The question of fruit storage is also taken up and a full description of storage plants given in detail. Fruit packing is also included, as well as packages for fruit and the preparation of all fruit products for market. An outline is given of fruit shows and their function dwelt upon at considerable length. The volume sells for $1.25.

Still another volume is worthy of special attention. The title is "Semi-Centennial History of the Patrons of Husbandry," written by Thomas Clark Atkeson, master of the West Virginia State Grange and past overseer of the National Grange. The title of this book gives a clear idea of the substance of it. It is written in a most interesting style, and it will make a splendid addition to the library of all persons who are members of the grange or who are interested in matters of that kind. The volume sells for $1.50.

The Wisconsin Farmer has made arrangements by which any of these volumes can be promptly supplied to its readers upon receipt of the price mentioned.

No Profit in Stumps.

If the stumps occupy fields already in cultivation they should come out—the quicker the better—for it costs real money every year to let them stand there. The fact that this money never gets in and out of the pocketbook or the bank does not change the matter of its loss. It would have been there if the stumps had not eaten it up.

Figures in various bulletins issued by state and United States agricultural departments indicate that the time required to blow out the average stump is twelve minutes. Half an hour a day, therefore, will clean up a lot of stumps in the course of a month and one man can accomplish a surprising amount of land clearing between now and the period of heavy work in the spring. All he needs is a crowbar and sledge, a broom stick, a cap crimper and a supply of explosives. It will be better, though, if he has an electric blasting machine to fire the charges, because it will enable him to save both work and money.

If the clearing involves the removal of many stumps from a piece of cut-over land and it is desired to keep the actual money outlay as low as possible the best plan is to crack each stump and loosen the roots with comparatively light charges of powder and then to pull the pieces with the team. Two horses nearly always can remove any roots left after a blast. Such a method takes more time and much more labor than to make a complete job of each stump with powder as you go.

The powder to use—and this is important, because it helps wonderfully to keep the cost down and to get the roots out deeply—is not a high percentage nitroglycerine dynamite but what is known as farm powder, which is an explosive made especially for removing stumps and blasting soil. It will take the stumps out without breaking off the roots near the top, will leave smaller holes in the ground, is safer, and costs only about two-thirds as much as the old type of dynamite.

IRON AGE
GARDEN TOOLS

Answer the farmer's big questions: How can I have a good garden with least expense? How can the wife have plenty of fresh vegetables for the home table with least labor?

IRON AGE Combined Hill and Drill Seeder solves the garden labor problem. Takes the place of many tools—stored in small space. Sows covers, cultivates, weeds, ridges, etc., better than old-time methods. A woman, boy or girl can push it and do a day's hand-work in [illegible] minutes. [illegible] combinations $[illegible] to $[illegible]. Write for booklet.

Influence of Ration and Age.

Missouri Station Conducts Experiment to Determine Outcome of Feeding Methods and Date of First Calving.

EXPERIENCED dairymen differ widely in their opinions with regard to the influence of the ration fed during the growing period and the age of first calving on the development of dairy cows. Some favor feeding heifer calves liberally in order to stimulate growth and constitutional vigor, while others prefer moderate feeding with considerable quantities of roughage in order to produce refinement and dairy conformation. With regard to age of calving, some dairymen believe that late calving is better, since it permits the cow to develop greater size and stronger constitution, while others advocate early calving because it seems to promote dairy type and temperament, which they consider more desirable than size.

This difference of opinion at once raises the question of whether it is possible to follow any plan of feeding or care of dairy heifers which will tend to develop them to their greatest capacity for milk production. In an effort to answer this question, Prof. C. H. Eckles has conducted an extensive experiment with pure-bred animals from the Missouri Experiment Station herd and the results obtained indicate in a general way the extent to which such a plan of feeding and management may be followed.

In the experiment both the ration and the age of first calving were found to affect appreciably the size of the mature animal. Heavy feeding, which included a liberal supply of grain, caused the animals to grow more rapidly and mature earlier. The light-fed calves never attained the size of the heavy fed ones, although their growth continued later in life in order to compensate to some extent for the slower rate at which they developed. Heavy feeding stimulated growth of skeleton first and then increase in body tissue and fat. No growth of skeleton was noticed in the Jerseys after the first four years and in the Holsteins and Ayrshires after five years, but increase in weight continued longer, in some cases up to six or seven years. When a comparison of the heavy-fed and light-fed groups was made, it was evident that a liberal ration, including some concentrates, is necessary to promote the full growth of the animal.

Early calving was found to check growth to such an extent that the heifers which calved at less than two years of age could be separated from the others by their difference in size. This smaller size of the early calving heifers was not due to gestation to any considerable extent, but to the demands of milk production. After lactation began, abundant feeding was practiced, but the heifers were not able to digest sufficient feed to provide for maximum growth and milk production both. However, no increase in size was gained by delaying calving later than the third year.

The group of smallest cows consisted of those which calved early and also were maintained on a scant ration. While few breeders prefer small cows, many of them favor medium-sized cows rather than large ones and it is an unsettled question whether it is more economical to develop dairy cows to their full size or not. This much may be said, however: Many of the very high milk production records were made by large cows, and experience shows that large cows are desirable because they have the capacity to consume large quantities of feed that may be used for milk production, but this characteristic must be associated with a strong stimulation to produce milk before any advantage is gained.

Although heavy feeding promoted large size, it also seemed to have a detrimental effect on the milking functions. This was attributed to the large amount of grain in the ration and was easily noticeable in the Jerseys and to a lesser extent in the Holsteins and Ayrshires. The animals on light feed averaged higher in the production of butter fat, but it must be remembered that the ration for the calves on heavy feed was unusually heavy in order to make the experimental difference as marked as possible. In ordinary feeding practice there is little danger of feeding growing calves so liberally that it would be a detriment later to their milking qualities. After a careful consideration of the breeding of the animals used in the experiment, the conclusion was reached that heredity was a much more powerful factor in influencing the milking qualities than the ration fed during the growing period of the animal.

Age of calving influenced the capacity for milk production to some extent. The highest production was found in the group of cows which were well matured before the lactation period began, and the lowest producers were cows which dropped their first calf before they were twenty months old. The most favorable age for first calving was from twenty-five to twenty-eight months for Jerseys or Guernseys and a little later than this for Holsteins and Ayrshires. Early calving puts the cows in the producing class as soon as possible and must be considered from the economic standpoint, but, after all, the most important thing is maximum production over a period of years, and it is quite probable that a well matured cow will soon overtake in total production the cow whose development was arrested by too early calving. It must be added, however, that very late calving, that is, after three years of age, has no advantage.

The results of the experiment indicate that rate of growth, maturity and size of cow are influenced by the ration supplied during the growing period and also by the age of first calving, while the milking functions are influenced by age of first calving, but only slightly by the ration. As far as milk production is concerned, neither of these factors is as important as heredity. However, to develop the capacity of milk production to its fullest extent, it may be advisable in most cases to provide a liberal ration during the growing period and to delay calving until the animal is sufficiently mature, which is usually between the ages of two and two and one-half years.

Dynamite in Car Lots.

Great interest is being manifested in central and northern Wisconsin in the purchase of dynamite in carload lots and probably Wisconsin will use more explosives this season than ever before in the history of the state. The price of explosives has been rather high, but Mr. Livingston, the state's chief land dealer, has shown the farmers that they do not need to use the highest per cent dynamite in blowing stumps and that as low as 20 per cent dynamite is perfectly good for splitting stumps which have been pulled. The banks are coöperating in the purchase of carload shipments of dynamite, and this work has now extended to include almost 100 Wisconsin communities. The Wisconsin Farmer made some mention of this work in connection with the report of the Eau Claire Land Clearing Conference. Local bankers are urged by the Wisconsin Advancement Association to get behind this plan of furnishing dynamite at lower cost. Explosives may be secured in car lots at almost half the cost of small purchases. The dealers who have been handling explosives have, with one or two exceptions, been glad to waive their profit and to handle the car shipments at cost. Thus the Wisconsin Advancement Association starts the ball rolling by originating the idea. The bankers do their part by advancing the money. The dealer helps by handling the shipments at cost and the farmers and settlers get the benefit. But in the end the farmer will not alone be benefited. Every acre of land cleared will be productive. From his added profit the farmer or settler will buy more goods of the local dealer. He will soon have enough money to pay off his debts and begin making deposits in the bank. Land will all increase in value in Wisconsin when more of the state is cleared and is devoted to profitable farming or dairying, so that the contributors of the Wisconsin Advancement Association will in the end also benefit by the movement which is now on.

Champion
Toledo

Dependable Spark Plugs

The gigantic Ford production is factory equipped with Champion X—they have been standard equipment since 1911 on over one million three hundred thousand Ford cars.

Champion X plays an important part in the efficient performance of the famous Ford motor.

Champions are scientifically built—and elaborately tested.

They show it by their sterling performance.

There is a Champion Plug specially designed and built for every type of automobile, tractor and gas engine. Ask for Champions and beware of substitutes.

Be *sure* the name "Champion" is *on the porcelain*, not merely on the box.

Dealers *everywhere* sell Champions.

FOND DU LAC APRIL

COLANTHA BELLE BOY DUTCHESS (139113)
By Dutchland Colantha Belle Boy (21 A. R. O. daughters) and out of Jewel Dutchess 4th, 30.55 lbs. Watch Steiner's consignment for cows bred to this bull. W. H. Steiner, Brownsville, Wis.

a—HENGERVELD MODEL AAGGIE GRACE (97478) 24.57 lbs., 3 A. R. O. daughters. b—DUTCHESS AAGGIE GRACE (133778), 26.05 lbs., 2 A. R. O. daughters. Two foundation cows in Sid Bird's herd, South Byron, Wis.

CHAMPION JOHANNA DE PAULINE (94988)
A grandson of Colantha 4th's Johanna. Eighteen of his daughters will be in the sale. Consigned by Henry L. Weber and H. W. Bennett, Oakfield, Wis.

This Sale Presents a great opportunity to buy at your own price the best breeding of the oldest and best breeders in the state, representing such families as the Korndyke, King Segis, Johanna, Homestead Jr. De Kol, Canary Paul Fobes Homestead, Model family and others. There are

100 Cows and Heifers

bred to such bulls as Sir Johanna Rag Apple De Kol, 37.09 lbs. butter in 7 days; **Sir Pietertje Ormsby Mercedes 38th, 34.59 lbs. butter; Mercedes 38th;** Sir Johanna De Kol 39th, 32 lbs.; Colantha Belle Boy Duchess, 30 lbs.; Bluebird Canary Butter Boy, 28.30 lbs.; **Adventure Lad, a son of Spring Farm King Pontiac 6th, 26.57 lbs.;** Colantha Johanna Champion 4th, 26.48 lbs.; Ponderosa Pietertje Ormsby, three dams average 32 lbs., 1,000 one year; S. F. Lyons' Cornucopia 2d, 31 lbs. There will be sons and daughters of these bulls.

W. J. Gillette & Sons are consigning 2 daughters of 30-lb. cows. **F. J. Bristol consigns 44 cows and heifers bred to a son of Spring Farm King Pontiac 6th.** His dam, Johanna Korndyke Butter Girl, has a record at 3 years of 26.57 lbs. She will be sold and will also be tested again before the sale.

W. H. Steiner consigns a 21-lb. 3-year-old bred to his 30-lb. sire. He also sells a bull from a 26-lb. dam, 800 lbs. butter one year.

W. P. Kissinger consigns a 20 and an 18-lb. daughter of a 25-lb. cow. Also a 20-lb. daughter of a 25-lb. cow.

S. H. Bird consigns a heifer from an 18-lb. daughter of Homestead Jr. De Kol, 2 from granddaughters of his, also a bull from Pauline Aaggie Grace, 28.30 lbs. butter 7 days, 768 lbs. one year.

S. C. Stanchfield consigns an 18-lb. daughter of a 27-lb. cow.

S. T. White consigns granddaughters of Homestead Jr. De Kol and Mooie Ormsby Count. These are just a sample of the good things we will sell. Catalog ready April 15th. Aucts., Kelly, Haeger & Mack. S. T. Wood in box.

S. H. Bird, *Sale Manager* **South Byron, Wis.**

HENRY L. WEBER AND H. W. BENNETT, OAKFIELD.

ARE consigning 18 daughters of Colantha Champion de Pauline (94988), that was sired by the noted bull, **Colantha Johanna Champion,** that is by Sir Fayne Concordia and out of **Colantha 4th's Johanna,** Wisconsin's most famous dairy cow. The dam of Colantha Champion de Pauline is Johanna Pauline 4th, that produced 91.5 lbs. milk in one day, 25.5 lbs. butter in 7 days and 731.25 lbs. butter in a year. These heifers are splendid individuals, well grown and are from heavy producing cows, which is practically a guarantee that they will be profitable animals to buy.

SID BIRD, SOUTH BYRON.

WE ARE offering some young stock from our herd that are descendants of our foundation cows that have produced a line of offspring noted for their **size, individuality and ability to produce consistently at the pail.**

G. C. STANCHFIELD, FON DU LAC.

IS CONSIGNING 8 cows and heifers bred to **Colantha Johanna Champion 4th (113134).** Record of dam and sire's dam is 30.80 lbs. 7 days and 1,022.25 lbs. 365 days. The consignment includes an 18-lb. daughter of a 27-lb. cow and a yearling bull from a 23-lb. dam and sired by Colantha Johanna Champion 4th.

W. J. GILLETTE & SONS, ROSENDALE.

ARE consigning 4 daughters of **King Peter Lyons (94224),** whose 6 nearest dams average 31.75 lbs. One of these is a 19.35-lb. junior two-year-old out of a 30-lb. cow and another is a 16-lb. daughter of a 30 lb. cow. These cows are bred to **Sir Pietertje Ormsby Mercedes 38th (110161),** whose dam and sire's dam average 35.07 lbs. They are also consigning a 26-lb. son of Sir Pietertje Ormsby Mercedes 38th.

W. H. STEINER, BROWNSVILLE,

IS CONSIGNING 12 head, including 2 bull calves. One of them is out of practically a 26-lb. cow and sired by the **30.55-lb. bull, Colantha Belle Boy Dutchess,** whose likeness is shown in the advertisement. The cows and heifers in the consignment are bred to this 30-lb. bull and constitute a chance for breeding a full sister to Sterling Aaggie Grace.

Fifty Head of King Segis and Pontiac Korndyke

red Holsteins

ent Mr. Bristol's Offering. It Is Doubtful if Any Herd in erica Contains as Much Blood of These Two Noted Sires s the One From Which This Consignment Comes.

IE consignment includes 35 head of cows, mostly two and three-year-olds, nine yearling heifers and six bull calves. Practically all the females are bred to **ADVENTURE LAD**), sired by **SPRING FARM KING PONTIAC 6TH**, whose rs are making a big showing and whose dam, Tweede De ss (83182), has a 34.39-lb. record. Spring Farm King Pon- is by Spring Farm Pontiac (66664), that is out of Tweede Lady (83166), 37.45 lbs. **ADVENTURE LAD** is out of **NA KORNDYKE BUTTER GIRL (157802)**, that has s. as a junior two-year-old, 26.57 lbs. as a three-year-old and on test—a splendid prospect for 35 lbs. She is by Johanna ke De Kol (45577), that has a 30-lb. daughter and has the on of being a grandson of Belle Korndyke and Johanna r. **JOHANNA KORNDYKE BUTTER GIRL**, as shown ut, has superior dairy conformation and is out of Crescent Butter Girl, a full sister to the great show cow, **CRESCENT Y BUTTER MAID**, that is not only recognized as one oted show cows of the breed, but also has a 29-lb. junior ar-old record. **JOHANNA KORNDYKE BUTTER GIRL, ISTINGUISHED DAM OF ADVENTURE LAD, WILL BE INCLUDED IN MR. BRISTOL'S CONSIGNMENT.**

consignment likewise includes 15 daughters of **JOHANNA UR LYONS (113137)**. A careful study of his pedigree the fact that he is a direct descendant of the animals which t the acme of Gillette's and Moyer's breeding. People fa- ith Holstein pedigrees recognize the fact that these are two reatest Holstein herds of today—herds which have accom- great things for the breed.

e are also three daughters of **LADY REKA MOOIE**, an- mous show cow; four daughters of Korndyke Hengerveld 22-lb. sister of **JOHANNA KORNDYKE BUTTER** hree nice daughters of De Colantha Champion 8th, a grand- Colantha Johanna Champion; one daughter of **UNEEDA YKE ABIGAIL BOY**, a 33-lb. bull, and a nice six-year- R. O. cow.

more spectacular in breeding are the three sons and three rs of **KING SEGIS PONTIAC POLKADOT**, a full broth- eeding to the $50,000 bull. One of these daughters is out ghter of **KING OF THE PONTIACS** and one of the sons a splendid A. R. O. daughter of **JOHANNA McKINLEY**

seldom that the public has an opportunity to purchase so oice breeding from one consignment and it is questionable le this spring will offer as good an opportunity to purchase s foundation stock as this one.

Bristol : Oakfield, Wis.

JOHANNA KORNDYKE BUTTER GIRL (157802)
20.04 lbs. Jr. 2, 26.57 lbs. at 3 years. Now on test and a good prospect for 35 lbs. Dam of Adventure Lad (165686). She is consigned by F. J. Bristol, Oakfield, Wis.

UNEEDA KORNDYKE DELLA (187913)
Five years old, good individual. She has 4 daughters in the herd consigned by F. J. Bristol, Oakfield, Wis.

ADVENTURE LAD (165686)
Sired by Spring Farm King Pontiac 6th, whose dam, Tweeda De Kol Lass (81382), has 34.39 lbs. Out of Johanna Korndyke Butter Girl (157802) and bred to practically all the females in our consignment. F. J. Bristol, Oakfield, Wis.

1842 The Seventy-Fifth Anniversary of 1917

P&O

LIGHT DRAFT PLOWS

Built for the Field Test.

Three-Quarters of a Century of "Knowing How" Hammered Into Every One of Them.

The product of the Parlin & Orendorff Co. has always been noted for simplicity of construction, great strength and ease of operation. It was upon such a basis that the founders of this business made their implements, established their reputation, and built their factory. It is upon the same foundation that the business has been carried on to this day, and in 1917 we celebrate our Diamond Jubilee; 75 years of practical experience gained through constantly striving to provide for the exacting requirements of three generations of American farmers.

For an even three-quarters of a century we have met the demand, and today we operate the largest and oldest permanently established plow factory in the whole world. "It's the way we build them."

P&O

Light Draft Plows, Harrows, Planters and Cultivators are made in all types and sizes, to meet the conditions in all sections, and are Backed by an Unqualified Guarantee.

We also make the most complete line of Traction Engine Plows produced, and we have a special catalog devoted to these famous plows.

The P&O Little Genius Engine Gang Plow

was the most popular plow shown at all points on the 1916 National Tractor Demonstration.

We will send P & O Catalogs to any address. While P & O Implements are sold only through established implement dealers, we welcome correspondence from farmers in all sections.

Ask Your Dealer or Write Us.

Preparing the Cow For Her Year's Work.

According to a bulletin recently published by the dairy department of the Iowa Agricultural College, the proper time to begin feeding a cow for milk production is six to eight weeks prior to freshening. She should have at least this length of time to rest and prepare for the next lactation period. The feeds given at this time should meet the following requirements: Rest and cool out the digestive tract, supply nourishment for the growth of the fetus or unborn calf, and build up the flesh and strength of the cow herself.

For the cows that are to freshen during the summer or early fall it is a good plan to have a small pasture set aside so that they may have abundance of pasture grass and not be molested by the other cows. In addition to this, a few pounds of ground oats and in some cases a small quantity of bran will be sufficient. Cows that are to freshen during the winter should receive from twenty to twenty-five pounds of corn silage, all the clover or alfalfa hay they desire and a grain mixture of three parts ground oats, two parts bran and one part oil meal. The amount of grain per day is to be governed by the individual animal. Animals thin in flesh may be given a small quantity of corn, but should not be crowded, but rather fleshed up gradually. Timothy hay and cottonseed meal are not desirable, as they are rather constipating, while laxative feeds are needed at this time. Too large a quantity of corn is likely to have a bad effect upon the system. It is well to reduce the ration slightly just prior to calving, as by so doing the danger of milk fever and after-calving troubles is decreased to some extent.

A few days before calving put the cow in a clean, disinfected, well-bedded box stall. If her bowels are not moving freely, a dose of three-fourths to one pound of epsom salts or one quart of raw linseed oil will prove very beneficial. A grain ration of two parts bran and one part oil meal is very good at this time.

For a few days after calving the cow's drinking water should be lukewarm. In addition to alfalfa or clover hay and a small quantity of silage, she should be fed bran mashes or a small allowance of bran, oil meal and ground oats. If the cow does not pass the afterbirth promptly and the man in charge does not understand the anatomy of the reproductive organs, a competent veterinarian should be called; that should be done also when the cow has difficulty in calving.

If the cow has been properly cared for the first three days she may then be placed on dry and more solid food. The manner in which she is fed during the next thirty days determines largely the character of the work she will do during her lactation period. Experienced feeders of beef cattle realize that thirty days are required to get steers on full feed, and likewise the dairy cow needs to be given thirty days. Without doubt parturition weakens the digestive apparatus and heavy feeding soon after calving is liable to be followed by indigestion, bloat or impaction. During the first thirty days after parturition the maternal instinct is at its highest pitch and during this time, if properly cared for, the cow can be brought to her greatest possible milk flow.

To do this the feeds must be suited to the individual cow's needs. Beginning on the fourth day with five pounds of grain daily, the ration should be increased slowly—say at the rate of one-half pound each alternate day. This rate of increase is rapid enough, for the cow will respond as well to a half pound increase as she will to a pound. This increase may continue just as long as the cow continues to increase profitably in her milk flow. When she ceases to respond, then the feed should be lessened in the same gradual manner for a few days and it will, as a rule, be noted that the cow will further increase in milk flow. The feed given on the day she begins to decline in milk practically determines the amount of grain she should receive. Much less than this amount will not compel her best work and any additional feed will be worse than wasted.

Good Hand Milking.

To the Editor:—Success in dairying depends a good deal upon proper milking. Careless milkers never produce record-breaking cows. The cows under their care will be more likely to degenerate in milk-producing capacity. If we look at it in this way we will know why rough, careless and irregular milkers are always a detriment to the development of a heavy milk-producing herd.

The udder of the cow should be considered as a delicate piece of machinery and handled accordingly. No roughness and no half operations are allowable. There is only one way to succeed in milking in so far as the operation of milking is concerned, only one natural way to get the full yield of milk with ease and without tending to damage the future usefulness of the cow.

The milk cannot be forced out of the udder into the teat until the muscle at the top of the teat where it joins the udder is pressed. As soon as this muscle is pressed the teat fills with milk. Now that the milk is in the teat it remains to force it through the orifice and into the pail and is best performed by placing the fingers about three-fourths of the way around the teat, pressure being used with the ends of the fingers against the palm of the hand. In this way the milk duct is better manipulated than if the fingers encircled the whole of the teat. The whole operation of milking should be carried out by the wrist downward, by the action of the fingers and hand, the arm is never brought into play by good milkers.

Some milkers, in an endeavor to make milking easier, practice "wet milking." In this operation the fingers are usually dipped in milk and the teats kept continually wet during the milking process. Such an unclean habit as this cannot be too strongly condemned. It is only a habit and, although it usually does make milking come easier, dairymen who lay claim to clean barns, clean cows and clean milkers never admit this method of milking in their herds. Dry hand milking should always be insisted upon. Hard milking cows can usually be improved by good milkers who milk with dry hands, while heifers and young cows can be spoiled for future milking by continually practicing wet hand milking.

In my opinion the milker who milks at a medium speed is better than a faster or slower milker. My experience goes to prove to me that the cows thus milked give milk for a longer time than those milked faster or slower and all the strippings are always obtained. Cows that are regularly milked by a fast milker invariably have a lot of strippings which means that at times when the milker is in a particular hurry the cows are not milked "clean" and this is a loss to the owner and injurious to the milk-producing functions of the cow. Of course, the slow milker does not stand much chance, but for choice I would rather have my cows milked by a slow milker than by a fast one. One drawback with the slow milker is that when someone else has to milk the cows, if the new milker should happen to be faster the cows do not appreciate him and, therefore, do not "let down" their milk so well.

It is very important that regularity be practiced in milking. The cows should be milked at as near the same time every morning and evening as possible. The hour at which the milking is done in the morning is the hour at which it should be done in the evening. One of the best ways to cause a cow to decrease in her milk yield is to do the milking at irregular periods. Subscriber.

THE INDIANA SILO

Fifty thousand are now in use on the finest farms in America.

If you are going to buy a silo—this satisfactory service rendered everywhere—should be of special interest to you.

The cost of all materials is advancing like the price of wheat and corn.

Why not save money by contracting for your silo now. It undoubtedly will cost you more next spring or summer.

Let us send you our proposition—to contract now for your silo and deliver it later.

We still have openings for a limited number of farmer agents.

Methods Employed For Raising Calves.

The method employed in raising dairy cows at the Wisconsin station during the past four years has been satisfactory. It may not coincide with the equally successful methods employed with other dairymen, but it is one which can be recommended.

It is aimed to give the cows of the herd the best care as regards feed, shelter and handling. Six weeks prior to calving, cows are carefully dried off in order to give them a rest from producing milk, which is to be recommended in all cases. During this time the grain ration is continued by feeding two to four pounds of oats and bran or two pounds of bran and one pound of oil meal, the amount depending upon the condition of the cow. It has been observed that this practice gives strength and vigor to the cow and to the calf she produces. The first two to four days the calf is allowed to run with the cow, after which it receives three to five pounds of its own mother's milk three times per day until four weeks old. In some instances if the young calf is small and inclined to be weak a smaller amount at a feed four times per day is fed. After the calf is ten days or two weeks old it usually noses about and will pick up hay or grain. It will sometimes pick up coarse butts of fodder or silage corncobs and swallow them, which is very sure to bring on a case of indigestion and sometimes serious difficulty. One should be careful to see that in the feed or bedding there is nothing of this character to cause the difficulty.

During the fifth week the milk is gradually changed to skim milk. The amount is not increased until about the eighth week, when the calf can be fed eight pounds twice per day. A small amount of grain and dried clover or alfalfa is placed before the calf ater it is ten days to two weeks old, the grain is fed immediately after the calf has taken milk. The feeding pails, stable and calves are kept as clean as possible and plenty of pure air is provided. The calves are kept on a cement floor over which are laid boards to keep calves off cold cement. The stable should be kept warm.

A small amount of corn silage is fed after the calf is a month or six weeks old. During the first summer the calves are fed regularly in the barn and turned out for exercise in shady paddocks or during nights only.

What Our Dairymen Are Feeding.

(Continued from page 11.)

method of feeding report satisfactory results. Many who did not buy enough feed in the fall, paid as high as $38 per ton for dried brewers' grains and bran in the month of March. As spring came on dried brewers' grains were not obtainable and the ration was changed to bran, twenty pounds; oats, twenty pounds, and sixty pounds of R. K. D. feed and used with fair results. Succotash composed of wheat and oats have given good results when fed as follows: Fifty pounds dried brewers' grains, fifty pounds succotash. Another good grain ration is thirty pounds succotash, fifty pounds dried brewers' grains and twenty pounds bran. My experience is that it is best for farmers to club together in the fall and buy their feed in car lots either through the local dealer or coöperative stores. This should be done even if it is necessary to borrow money to do it. The cow tester is in a position from his experience to advise the best feed, prices and analysis of feeds considered. Dried brewers' grains we found to be about the best, considering the protein content, at the prices prevailing last fall. When a number of farmers belong to the equity association they quite frequently consult the cow testers relative to feeds which they ought to buy. Personally I think it is advisable to compose a grain ration in this section with the addition of some mill feeds. I think that is the way to get the best results. Some high protein feed is absolutely necessary. Of course, good silage and good clover hay lessen the amount of grain necessary to produce a satisfactory ration. We have found that good shredded corn fodder is better than timothy hay. Clover hay cured in the cock after wilting for one week and then hauled into the barn gave the best results next to second crop clover hay. We also found a small amount of oat straw was relished by a great many cows, this giving a variety to the ration. I believe the number of cows the farmer should keep should be determined to some extent by the amount of hay and silage he can raise because as a general proposition one-half or more of his grain ration must be purchased. R. A. Boyd.

Chippewa Co., Wisconsin.

Grain-fed Cow Best Summer Producer.

To the Editor:—The farmers around River Falls and Roberts were obliged to make some changes in their feeding this winter and spring due to snowstorms which blocked trains and also to the fact that there was a shortage of feed on hand. Some of our herds were obliged to go with very little feed part of the time. I am well aware that some believe it does not pay to feed grain to the cows at the present price of feed, but it is my judgment, considering the present price of butter fat, that they cannot afford to take it away from the cow. It may be true that a cow which is not producing very great quantities of milk would not pay much of a profit on grain feed, but the cow producing a fairly good quantity will surely pay out, as you cannot count on all of the profit in the wintertime. A grain-fed cow will produce considerably more in the summertime than one which has had no grain during the winter months. C. G. Carlson.

Official Tester River Falls and Roberts Association.

Cow Testing Reports.

Westby Association.

To the Editor:—This association had twenty-eight cows in the forty-pound list during the twenty-eight days of February. Eight of these gave over forty-five pounds of butter fat. A pure-bred Holstein owned by the Vernon County Farm produced 63.7 pounds of fat. During the month she made a seven-day A. R. O. record of 24.29 pounds of butter. The second best record for February 52.6 pounds of butter fat, was made by a registered Holstein heifer, three years old, owned by C. O. Olson, of Westby. The forty-five-pound list for February follows:

Owner and breed	Age	When fresh	Lbs. milk	Lbs. B. fat

Alban and New Hope Association

To the Editor:—We have succeeded in weeding out ten more unprofitable cows in the month just past. One member has bought a pure-bred bull. A grade Guernsey, nine years old, took the banner with 1,299 pounds of milk and 71.5 pounds of butter fat. The J. P. Madsen herd of ten Guernseys, again wins the herd honors with an average of 805 pounds of milk and 36.2 pounds of butter fat in thirty days. Mr. Madsen received $162.79 for his product, paid $67.10 for feed, netting $95.69. The following is our forty-six-pound list for the thirty-day period ending February 10th:

The Supremacy of the
NEW DE LAVAL

THERE may be some question as to who makes the best wagon or the best plow or the best watch, but when it comes to cream separators the supremacy of the De Laval is acknowledged at once by every fair minded and impartial man who is familiar with the cream separator situation.

Thousands and thousands of tests, the world over, have proven that the De Laval skims the cleanest.

The construction of the New De Laval keeps it in a class by itself.

It outlasts and outwears all other makes by far, and can be run with much less cost for repairs.

The world-wide De Laval organization, with agents and representatives in almost every locality where cows are milked, ready to serve you, insures that the buyer of a De Laval will get quick and valuable service when he needs it.

More De Lavals are sold every year than all other makes combined.

The New De Laval has greater capacity than the 1916 style, is simpler in construction, has fewer and interchangeable discs, is easier to wash, and the skimming efficiency is even greater.

Each New De Laval is equipped with a Bell Speed Indicator.

Order your De Laval now and let it begin saving cream for you right away. Remember that a De Laval may be bought for cash or on such liberal terms as to save its own cost. See the local De Laval agent, or if you don't know him, write to the nearest De Laval office as below.

New Catalog will be mailed upon request

FARM LANDS.

FOR SALE—One of Wisconsin's best highly improved farms. If you want one made to order don't think you could improve on it. 229 acres all in one body. 180 acres under plow. 20 acres woodland with underbrush removed, balance pasture. All of his can be plowed as this pasture has no stumps or underbrush. No waste land. All heavy, clay loam soil, same as the best in southern Wisconsin. Lays fairly level, just enough slope to give the same good drainage. Nice 9 room house, lawn, grove, large basement barn 36x84, cement floor, gas and windmill water system. Other buildings. 4½ miles from Ry. town and seven miles from county seat, city of 3,500. Fine neighborhood. Corn, cattle, hogs main crop. Price $110 per acre, easy terms, worth more. Ry. fare refunded if not found as advertised. Write H. C. Inenfeldt, owner, Menomonie, Wis.

NORTH DAKOTA is essentially an agricultural state. In past five years it ranked first in production of wheat twice; twice it was second and once third; always first in production of spring wheat; also flax, equalling production of all other states. Once it was first in barley—never below third; never below seventh in rye or oats. Has made great increase in corn and stock. You can still obtain home there without commission to us, while land is still cheap. Easy terms. Write at once for plan direct dealing. J. S. Murphy, Immigration Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minnesota.

OREGON & CALIFORNIA RAILROAD CO. grant lands. Title to same revested in United States by act of Congress dated June 9, 1916. Two million three hundred thousand acres to be opened for homesteads and sale. Timber and agricultural lands. Containing some of best land left in United States. Now is the opportune time. Large sectional map showing lands and description of soil, climate, rainfall, elevations, etc. Postpaid one dollar. Grant Lands Locating Co., Box 610, Portland, Oregon.

THIS LAND HUNGER, so evident now, is going to result in practically taking the most of our available dairy lands in Aitkin County, therefore, this is a warning to you, if you intend to get any of it, you should act without delay. For the first step, send your name and address so that we can forward out illustrated literature showing what others are doing and what you can do, if you will. Write Arnold, Land Agent, Rock Island Railway, 153 Wolvin Bldg., Duluth, Minn.

STRICTLY First-class Land. 92 acres richest black silt and clay, largely level surface, with improvements, at only $35 per acre. The kind of land that produces big, hard maples. Only 4 miles town over gravelled boulevard, 1 to school, near lake. Send for description of improvements and further particulars. Baker, B-110, St. Croix Falls, Wisconsin.

LANDOLOGY, a magazine giving the facts in regard to the land situation. Three months' subscription, FREE. If for a home or as an investment you are thinking of buying good farm lands, simply write me a letter and say, "Mail me LANDOLOGY and all particulars FREE." Address Editor, Landology, Skidmore Land Co., 310 Skidmore Bldg., Marinette, Wis.

HERE IS YOUR CHANCE—Get a home; $1.00 per acre down and long time on balance. Hardwood timber land with timber enough to pay for the land and build your buildings, close to market, school and cheese factories. Clay loam soil all tillable. Taylor Co., the clover and dairy belt of Wis. Rib River Land Co., Medford, Wisconsin.

A SMALL farm in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Joaquin Valley illus. folders, free. C. L. Seagraves, Ind. Com'r, A.T. & S.F. Ry., 1959 Ry. Ex., Chicago.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You'll deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

120 ACRES, 60 clear, 20 pasture, 40 good wood, good frame buildings; school-house adjoining land, cheese-factory ¾ mile; 6 miles to Wausau, 2½ miles to Kelly Station. With all stock, crops and machinery, will sacrifice at $7,500.00; $2,000 cash, balance on easy terms. Wm. Albrecht, Jr., Wausau, Wisconsin.

A TRUCK FARM BARGAIN of 9½ acres in city of 10,000 inhabitants; good buildings; a money maker; death of owner necessitates sale; $3,300; $1,600 cash; The E. L. C. Co., 121-M, Dept. 10, Merrill, Wisconsin.

TAIL HOLDERS.

COWS' tail holders, post paid; sample 12c, 5 or more 10c each. F. C. Gieseker, Elmwood, Wis.

"Beef farming" requires comparatively little labor, or expensive equipment. It is without doubt one of the best ways to utilize to the fullest extent Wisconsin's large areas of rough and broken lands, which otherwise would be barren and useless for supplying humanity with food at this critical time.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production

The demand for farm labor in Canada is so great that as an inducement to secure at once the necessary help required, Canada will **give one hundred and sixty acres of land free as a homestead** and allow the farm laborer, who files on land, to apply the time he is working for other farmers as residence duties the same as if he had lived on the land he had applied for. This offer made onl yto men working on Canadian farms for at least 6 months during 1917, thus reducing the necessity of actual residence to 2 years instead of 3 years, as under usual conditions. This appeal for farm help is no way connected with enlistment for military service, but solely to secure farm laborers to increase agricultural output. A wonderful opportunity to earn good wages while securing a farm. Canadian Government will pay all far over one-cent per mile from St. Paul and Duluth to Canadian destination. Information as to low railway rates, etc., may be had on application to

GEORGE A. HALL
Canadian Government Agent
123 Second St. Milwaukee, Wis.

80 ACRE IMPROVED FARM

THREE miles from Coleman, Marinette County, Wisconsin. 65 acres under plow, balance pasture. Good live creek runs through the 80. Fair house and barn; new tile silo. POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Lippincott Talks Brooding.

Some simple suggestions on brooding chicks have been obtained from W. A. Lippincott, head of the poultry department of the Kansas State Agricultural College, who at present is taking special work at the College of Agriculture, University of Wisconsin.

"The best brooder made cannot hatch strong chicks from puny stock. Be sure of vigor, or do not attempt to hatch.

"Where vigor is present, incubator-hatched chicks are better than hen-hatched chicks for artificial rearing. Further, they are not usually handicapped with lice.

"The first four weeks in a chick's life are the most critical. One should not be in a hurry to take chicks from the incubator. Leave them alone until they show signs of being hungry.

"After the brooder is well regulated, attend to bedding the hover. Do not use sand, chopped straw, or chaff, which may be eaten by the chicks. Clogged digestive tracts often result in heavy losses. Bed the hover with alfalfa leaves, alfalfa meal, or bran. It may seem expensive, but it is a 'safety first' precaution.

"Don't let the hover bedding get foul or sour. Change it often, using soft straw after the first few days.

"By far the most essential thing to watch in feeding brooder chicks is the sweetness of the feed. Musty or moldy grain, kept long at high bin temperatures, is dangerous. Pick up a handful of the feed and smell it thoroughly—bury the nose in it.

"The old hen, that keeps chicks on the move, feeding them a little at a time, here and there, should offer a good example. Wise poultrymen feed little, and often, to afford exercise and keep up keen and healthy appetites in the brood.

"Feed five times a day during the critical period. Mashes should be fed dry and cracked grain may be scattered in the litter. There is no best ration for chick feeding.

"With all rations, whatever they are, plenty of sour milk or buttermilk should be included. Milk is the one most important chick feed.

Poultry Association Officers

The Wisconsin Poultry Breeders' Association, in a recent vote by mail, elected the following officers: President, George W. Hackett, North Freedom; vice president, J. G. Halpin, Madison; second vice president, E. L. Bemis, Fond du Lac; secretary-treasurer, Hyliger De Windt, Oconomowoc; members of executive committee, H. W. Halbach, Waterford; T. J. Berto, Watertown, and W. H. Lambs, Waupaca, tied with E. G. Roberts, Fort Atkinson, for the third place.

Question For Poultry Raisers.

To the Editor:—I have been reading with interest what The Wisconsin Farmer has to say about poultry and especially on disease among chickens, but I have not yet heard of anyone with the same complaint in their flock as I have had in my flock this past year and I have not been able to find a remedy for them as yet, even though I have been trying different remedies, and so I come to The Wisconsin Farmer or some of its readers for advice and I hope to get help.

My chickens don't all act alike. Some stand around or sit around on the roosts acting stupid and lifeless. Their heads do not look really pale; neither do they get very light in weight, although they do not eat much and the first thing we know they are dead. Now I know it isn't cholera or liver trouble, for I have seen chickens with that trouble. And then another trouble is that they get lame. As much as I can see the lameness is in the legs. It seems to start in one leg first, then after while it is in both legs and they get so lame they can hardly walk and the lameness continues to get worse all the time. Yet they seem to eat well and they will sometimes linger on that way for weeks before they die. Can you tell me what the trouble is with both of these ailments and also a remedy for them? I have a nice, dry henhouse and keep it clean and give them a variety of feed and plenty of clean water. They always have oyster shells to eat and poultry charcoal; in fact, I give them the best of care. Yet they do not do as well in laying as they should, considering the number of hens that I have. Now if you can give me any advice as to what I can do for diseases of this kind I certainly would appreciate it and if need be you can publish the question in The Wisconsin Farmer. I only hope I can find a remedy for them soon and will be glad to have any of your readers answer me through the columns of this paper. Mrs. John Grunewald.

Walworth Co., Wisconsin.

Coal Will Keep But Low Prices Will Not

Buy Your Coal Now

Save $2 to $4 on Every Ton

TECUMSEH Coal customers proved that it paid to buy coal early. The high prices of 1916 found them prepared. Early coal buying saved them big money. Don't wait till the snow flies and pay the high prices. Every ton of Tecumseh Coal you buy *now* saves you dollars and protects you from higher prices that are *sure* to come.

Tecumseh is mined in Indiana from that famous number five vein which is reported to produce the *finest* soft coal mined in the Middle West.

Tecumseh Coal

$2.50 Per Ton During April

During April only **Tecumseh will sell for $2.50 per ton in carload lots, F.O.B. mines**

Think of it! *Guaranteed weight* and *guaranteed quality coal* at less than half what you've been paying. Every pound of Tecumseh Coal is absolutely guaranteed to produce 13,400 B. T. U.'s with only 9% ash and 9% moisture. That means more heat, less waste and a lower cost per ton. Tecumseh is pure coal, clinkerless, free burning and the kind that will hold fire over night. Don't you think Tecumseh deserves your investigation?

Thousands Testify to Tecumseh Quality

November 17, 1916
Every individual is more than pleased with the quality of your coal and all declare that the Tecumseh Coal will be the only coal used in the future. Kindly quote me prices on a quick shipment of another car.
Signed (Name and Address furnished on request)

December 1, 1916
Tecumseh Coal is equal to coal for which I have paid $7.00 a ton. It is too bad that I didn't buy ten cars instead of one, but nevertheless it taught me a lesson. Next year I will have all coal shipped during the summer. Signed (Name and Address on request)

Don't Buy a Carload

If a carload is too much for you we'll show you how to buy what you need at our low mine prices. Just tell us to explain the famous Tecumseh Coal Club Plan. It has been a wonderful help to hundreds of families.

"The Man Who Did" explains the coal situation and what it means to every coal user. It tells why it will pay you to buy Tecumseh Coal *early* and the money you can actually save. Send for your copy today.

"The Quality Goes Clear Through"

This Dort slogan is honestly descriptive of the thorough, quality construction of the Dort car.

You will be impressed by the handsome appearance of the Dort—but the quality does not stop here. Beneath the paint, beneath the upholstery, **under the surface,** is the real quality.

This excellence within is the part that enables the Dort to give perfect service day after day and year after year under the hardest possible conditions. This is the quality that has made the Dort the leader among moderate priced cars.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., The Wisconsin Farmer, Madison, Wisconsin.

On Living Alone.

Being alone is looked upon by some people as the greatest of calamities and any associate is snatched by them in order to prevent solitude. It seems to me a strange attitude, for I cannot help but feel that solitude and association get together to help round out one individual. An occasional period when one can be by himself gives the only opportunity of checking up his relation with the world. Someone has said that the person who can find the reasons for things in his life—the correct reasons—is the one who finds success. Without a moment to oneself, the reason for this gain and that loss are passed over without a thought, unless an outside influence should chance to force them into prominence. —[Eleanor Craig.

Starch From Small Potatoes.

When the potatoes are sorted over on the farm there are always several bushels of small ones. These small potatoes, even the very tiniest, need not go to waste. When they are sorted out, wash them thoroughly with a vegetable brush. Then grate them without removing the skins, or run them through a meat grinder. Pour clear water over the gratings and let them stand for a few hours. Remove the peelings and other foreign substances from the top. Then add more clear water and allow it to stand overnight, so the starch granules will settle to the bottom. The next morning scrape off the dark part of the starch again, strain it through a cheesecloth bag and allow the water to evaporate from it. This starch may be used in making cornstarch puddings, for the thickening of salad dressing, in milk dishes such as custards and ice creams, and also in pudding sauces. It is not much trouble to make the starch. A bushel of potatoes makes a quart and a half of starch and there is no expense to the preparation.

About Whipping Cream.

Richness, age and cold are essential in whipping cream. By richness is meant 30 to 40 per cent cream; by age, at least twenty-four hours old—better, thirty-six; cold does not have to be explained, but it is important. If cream refuses to "whip" and gets frothy, two drops of lemon juice added will relieve the difficulty. It makes the fat more viscous, which gives it the power to become distended with air. It has the same effect as the lactic acid, which develops in cream upon standing. A very little lemon juice is sufficient, two or three drops to a cupful of cream, or half a teaspoonful to a quart. This slight amount will not flavor the cream nor tend to sour it. There will be no more trouble with frothiness, and a "whipped" cream will soon result.

Coat Lemons With Paraffin.

To the Editor:—In reply to the lady who wishes to know how to keep lemons will say that I have kept them for months by turning a glass jelly cup over them and not disturbing until needed. I have read that they could be kept all summer by giving them a thin coat of paraffin wax and keeping in a cool place. I intend to try that myself. Mrs. B. W. H.

Sixteen Years' Experience Canning Vegetables.

To the Editor:—I saw in a recent issue where someone would like a recipe for canning peas. I have a recipe I have used for sixteen years with good success. I have never had any spoil.

The first important point is to sterilize your jars. Pick the peas in the morning and get them ready for canning. I prefer young peas, not too hard. Do not let them set overnight, but can while fresh. Put the peas in the jars and fill brimming full with cold water. Add half a teaspoonful of salt to each jar. Pack the jars in a boiler with a board in the bottom. Place the jars side by side. Fill the boiler with cold water so it will come half way up the jars. Sterilize two and one-half hours, counting from the time the water begins to boil. If the water boils away, add more, boiling hot. Do not screw the caps on tightly while boiling; tighten when taken out of the boiler. Keep in a dark, cool cellar. I have canned all fresh vegetables this way. I let the jars stand on the cap overnight to be sure they are sealed perfectly.

STAR PATTERN.

Two attractive quilt blocks and a quilting pattern. Either of these blocks pieced of blue, yellow, pink or any col-

or to match the decoration of a particular room, on a white ground, would be dainty.

YOUNG MAN'S FANCY.

THE YOUNG FOLKS.

Belongs to Little Mothers' Club.

Dear Young Folks:—When the paper comes I always look for the Young Folks' corner. I am twelve years old. I can do tatting and crocheting. I go to school every day. The girls in the school have a club that we call the little mothers' club. We meet every two weeks. Every Friday after school the girls sew. We are making a quilt and are sewing blocks together by hand. The blocks are blue and white. They make a pretty pattern. We are going to sell chances on it and are going to spend the money we get for it on things for our playground at school.

—Emma.

Enjoys Open-Air Concert.

Dear Young Folks:—This is my first letter to the Young Folks' page. I always enjoy reading the letters, so

When writing to advertisers kindly The Wisconsin Farmer.

thought I would write and tell you about our pets.

I am thirteen years old, am four feet nine and one-half inches tall and weigh ninety pounds. I have two brothers and four sisters. My oldest brother is sixteen years old and helps papa with the farm work and chores. We live a mile and a half from school. We all go to school except the baby and she is too young. We live on a farm of 220 acres, four miles from town.

My papa has a big automobile and on Saturday nights during the summer our band in town gives open-air concerts on the streets and we all go to hear them. There are from 100 to 150 automobiles every night that the weather is good.

We have a little pup three months old. His name is Rover. We have lots of fun playing with him when we come from school. We have a little colt and twin calves and they are very playful. —Florence.

Pet Pigeon Flew Away.

Dear Young Folks:—I want to join your fun if I may. I have two brothers and five sisters. The youngest in our family is a month old. I go to school at Stringtown. I am in the fifth grade. We drive our old horse, Bill, to the carriage and take our neighbors with us. There is a big load. My oldest brother goes to high school. We live on a farm and my father owns 196 acres of land. It is very nice to live on a farm.

We have a pet dog that is a very nice playmate. His name is Teddy. He jumps before us when we try to run from him. Once we had a pet pigeon for about four months. Then it found its playmate and flew away, but it was very tame when we did have it, for when we came with wheat in our hands it would coo and fly down on our arm and eat. Sometimes when we ran out it came and rested on our shoulder. We have a pet bantam now. She lays an egg nearly every day in spring and summertime. —Irvin.

Wisconsin Seed Special.

The seed and home power special train which started a state-wide trip via the Soo Line and the Chicago, Milwaukee and St. Paul Railroads, March 24th, ended its tour at Waukesha April 7th. At all points in the itinerary the special train was met by large audiences of interested farmers. This special train was made possible by the fortunate combination between the Wisconsin Bankers' Association and the Wisconsin College of Agriculture. The coöperative spirit shown by the railway lines is also to be highly commended. Bankers at the cities and villages where the special was scheduled to stop helped things along by advertising in advance and helping to get an interested audience. The Wisconsin Order of the Experiment Station furnished the samples of grains and grasses, the same being a part of the exhibits at the recent state grain show at Madison.

Prof. R. A. Moore, of the college of agriculture, is well pleased with the showing made. He attributes a great part of the success of the tour to the difference in the methods used now and in practice several years ago. The old idea of coming to a town and meeting with a crowd of farmers for thirty minutes or so and then running on to the next town was bound to be unsatisfactory. Ten years ago Mr. Moore asserts this was tried by the college, but with less success than the present trip. Farmers want to see something when such a tour has been advertised and this train more than accomplishes this. In one car was the exhibit of grains, and here Professor Moore and his staff held out, giving the people short talks on rotation, seed treatment and selection and alfalfa pointers. In another car Professor White, with a competent equipment of labor-saving devices, electric light plant and a model septic tank arrangement practical for farm purposes talked unceasingly to eager groups of men, many of whom have heretofore thought such improvements too costly or complicated for their means. For 1-10 cent per hour per light, according to Professor White, this lighting plant in the car will operate. That means that for the cost of 1 cent per hour a family can have all the privileges of better light in the home. At Stevens Point over 1,600 people passed through the cars and listened to the lectures. It was the same way at Portage, Hancock and all the other towns along the line. Every minute of the time of the lecturers was taken up during their stay at a city, as the questions kept coming as long as the train stayed in a town. The trip will undoubtedly be repeated next year, probably over another road, and through a different section of the state.

More Sheep and Fewer Dogs.

A Slogan for Wisconsin Farmers Suggested by One of Our Sheep Raisers—Prices of Sheep Are Still Soaring High.

Sheep breeders are having their innings because mutton and wool are scarce and high in price. Breeders of pure-bred flocks have orders that must remain unfilled, while breeders of grade sheep are by no means able to satisfy the demand. In the following communication Mr. George M. McKerrow gives some interesting sheep history, particularly on that phase of it referring to the value of both grades and pure breds. Mr. McKerrow writes:

What is to be the future of the sheep business? Only a few weeks ago grade ewes sold at a Wisconsin auction sale for $30 per head. Wisconsin fed lambs have sold on the Chicago market for $15 and over per hundredweight, and I had thought these were record prices. While attending a sale of pure-bred sheep in Canada on March 27th, the prices realized for the good ones ranged from $35 to $168, buyers being present from the provinces of Alberta, Saskatchewan and Ontario, and from the states of Iowa, New York and Wisconsin. The sensation came when a bunch of grade, long-wooled ewes sold to local farmers at $30 to $34 a head. When I remarked to Professor Day, of the Ontario Agricultural College, that I thought this a sensational price for grade ewes, he remarked in turn that a number of good grades had sold during the winter at farm auctions at $25 to $35 per head. Henry Arkell told me of a dozen choice grade Oxford ewes which had been sold in his neighborhood in pairs at farm auction at $70 to $90 per pair. Every good ewe should be kept on the farm. No one should be tempted to slaughter ewes even for the high prices which now prevail for mutton. Wisconsin farms need more sheep, and no line of live stock breeding offers better inducements at this time than sheep husbandry. The world is short of sheep and wool, and without doubt good prices will continue to prevail for many years to come. More sheep and fewer dogs should be the slogan of Wisconsin farmers.

There are few farms in Wisconsin that would not be benefited by the presence of a flock of sheep, and the sensational prices referred to by Mr. McKerrow ought to accomplish the important purpose of stimulating interest in the sheep industry. While values will not always remain on their present high level, the time will never come when a flock of sheep, sensibly cared for, will not pay handsome profits. Men may wrangle over the existence of the dual-purpose function as applied to cattle. The existence of the real dual-purpose cow is denied by those who believe in the doctrine of specialization, but when we come to the discussion of sheep all the controversy is over. Where we have hundreds of flocks of sheep in Wisconsin we should have thousands, converting the good foodstuffs of our state, as well as the waste, into the products for which the world is clamoring, namely, wool and mutton. We hope that Wisconsin Farmer readers will absorb the real significance of Mr. McKerrow's letter and be led to the conclusion that a flock of sheep will pay handsomely.

The Colfax Produce Company, of Colfax, Wisconsin, is now engaged in the mercantile business, having erected a new building at the cost of $9,000. This company has 167 stockholders, chiefly farmers residing in the vicinity of Colfax. About $24,000 worth of stock has been subscribed. The company was organized in 1912 carrying on a general produce business and specializing in potatoes. It has a complete stock of $40,000 with the following officers: President, O. A. Amble; manager and treasurer, C. E. Leggen; secretary, Matt S. Olson.

If This Catches Your Eye

concentrate on this fact—no horse nail holds a shoe like "The Capewell." It has half again the tensile strength of any other nail.

It pays to have your shoer use Capewell nails. Best in the world at a fair price; not cheapest regardless of quality. Don't forget the brand—"Capewell."

A Tractor for Spring Farm Work—an Automobile for Pleasure

Make your Ford 100% efficient on the farm—turn it into an all-purpose machine and reap profits as well as pleasure from its use.

This can be done—quickly and easily—with the new

TRACFORD
"The Tractor Universal"
$125 F. O. B. Detroit

The TRACFORD is a tractor attachment for the standard Ford car. Consisting of two steel tractor wheels, a two inch solid steel dead axle, internal gear and roller pinions, it can be easily attached by anyone.

The close coupled feature of the TRACFORD is among its strongest points. By reason of the location of the dead axle in advance of the Ford axle and draw bar, the TRACFORD is the only Ford plowing attachment which is able to utilize the weight of the driver and all of the car forward of the axle to produce traction. That is why the TRACFORD has so much draw bar pull.

LOOK INTO THIS!

Works only on high gear—does not overheat. A 9 to 1 gear reduction enables you to plow on high gear without motor racing. A special cooling device—a valuable addition to any Ford—is included.

Simple—dependable—powerful—the TRACFORD will do any work anywhere that can be successfully handled by three good horses.

There is a TRACFORD dealer in your district who can give you as convincing a demonstration as you may require. Write us at once and let us put you in touch with him.

Ask for "The Tracford Catechism". It answers the questions—both technical and practical—that you want to ask

Where Breeding Is a Fine Art.

Korndyke and King Segis Blood Predominates on the F. J Bristol Farm in Fond du Lac County--Breeding Experiences.

MR. F. J. BRISTOL, of Oakfield, Fond du Lac county, did not start out as a farmer, but twenty years of effort in breeding premier Holstein stock have firmly established the name of the F. J. Bristol & Sons' Company in the Holstein world. Mr. Bristol was originally in the mercantile business, following the lead of his father, who was a creamery man and a buyer of cheese and butter. Although Mr. Bristol liked the work, and fared fairly well at it, he became interested in a farm close to Oakfield about twenty-five years ago, and from that time on his interest in farming increased until his commercial career died an early death when the vision of Holstein prosperity came to him. At that time the Holstein that could command a price of better than $100 was scarce and so it happened that the first six animals were purchased for about $300. The sale of the first bull calf brought the stupendous sum of $15. However, their price increased with each succeeding year. The second lot netted $25 a head, the next $40 each, and so on, until today there is no limit at which an animal will sell, providing its breeding and individuality warrant extraordinary prices. The first big sale which showed him the value of testing and breeding was a bull calf which sold at $250 on the strength of a twenty-pound, seven-day record made by the dam. That was a world's record at the time for a two year old. It was also the beginning of Mr. Bristol's continued efforts towards the breeding of stock that would carry with it production and ability to reproduce.

The first cows of the herd were descendant from the cow of the Korndyke, the foundation cow of the Korndyke family. The breeding of the last twenty years has run strongly along these blood lines and some extremely well-bred stuff has been produced in the herd. There are now about 200 head of cattle on the place, of which eighty cows are milking. Cows are tested for seven-day and thirty-day records by official testers and their yearly production computed from semi-monthly private tests and daily weighing of each yield of milk.

The young stock on the place receive grain until they are a year and a half old. If they are born in winter they are fed in the lot during the first summer and pass their second summer on silage and pasture rations. Heifers usually freshen at about twenty-seven months of age. The cows get a light grain feed the year around according to yield. Each cow is well prepared, however, before freshening and fed with such feeds as will put her in condition for calving. The calf is not allowed to stay with the cow for more than twelve hours, or until it has had one good feed from the mother. It is kept on a ration of approximately six pounds of whole milk for four weeks, when the ration is gradually changed to skim milk, on which it is fed until eight months of age. A light grain ration and clover and mixed hay is fed from the very beginning.

The farm contains in all about 500 acres, on which the grain and roughage for the herd are produced. A three-year rotation of barley, corn and clover is practiced. The barley is sold from the place and from its proceeds concentrates are purchased. Enough roughage to feed the herd and allow for the sale of a considerable portion is produced each year. The surplus in hay last year amounted to better than $1,000.

The breeding work that has been carried on at the farm has all been along definite lines. Korndyke and King Segis blood is predominant in all the animals. The senior herd sire at present is Adventure Lad, who is by Spring Farm King Pontiac 6th, whose

KELLOGG'S NURSERY, Box 224, Janesville, Wis.

dam has a seven-day record of thirty-seven pounds of butter. Spring Farm King Pontiac 6th is by Spring Farm Pontiac, he by King of the Pontiacs, that has sired 186 A. R. O. daughters, including the famous K. P. Pontiac Lass, with a record of 44.18 pounds of butter in seven days. On the dam side, Adventure Lad stands well also. He is out of Johanna Korndyke Butter Girl, with a three-year-old record of 26.57 pounds of butter in seven days. His grandam is Crescent Beauty Butter Girl, a full sister to Crescent Beauty Butter Maid, who, as a junior three-year-old, made 29.04 pounds of butter in seven days. Adventure Lad also traces back to Belle Korndyke and Johanna Bonheur, both noted cows.

The junior sire is Uneeda Polkadot Korndyke, who is by King Segis Pontiac Polkadot and out of the same cow as Adventure Lad. King Segis Pontiac Polkadot is a full brother in blood to King Segis Pontiac Alcartra, the $50,000 sire. His grandam, Pontiac Clothilde De Kol 2d, held the world's record for a time with a record of 37.21 pounds of butter in seven days and his dam held the senior three-year-old record of 30.87 pounds of butter in seven days. The combination proved the making of the Alcartra bull. Few breeders even know that Mr. Bristol at one time owned the famous sire. The way this came about was that Mr. Bristol had gone east to purchase a bull of just this breeding for a herd sire from the men who were prominent in breeding Korndyke and Segis stock at that time. Finding nothing to his liking he made the breeder an offer of $1,000 for an unborn calf along the lines of breeding which he desired. The agreement was made and Mr. Bristol the next year found himself the owner of the Alcartra bull. Realizing that the bull was one of the most sought-after sires of the breed, owing to the record just finished by his dam and grandam, he made an agreement with the breeder to place him on sale, providing that he could get a calf of similar breeding from the owners, and that he receive half of the sale price of the bull he purchased. The calf sold for better than $10,000 and later on brought the unprecedented price of $50,000.

Johanna Korndyke Pauline De Kol, 22.13 pounds at junior two year old. Over seventy pounds milk a day.

The buildings on the Bristol place are roomy and well lighted and ventilated. Besides three large barns for cows and young stock, a new barn has recently been completed. It is 46x60 feet and has been built especially for accommodating the test cows and those on unofficial yearly test. A complete carrier system connects all barns with the milk house and makes the feeding and cleaning out of the barns easy. There are six silos on the farm, several built of concrete, and the rest of wood, but each doing excellent service.

Connected with the barn by a passageway is the power plant and milk house. The power plant furnishes power for the separator and charges the batteries for the electric light system which has been installed in all the buildings on the place. The light is furnished for a cheaper rate from this private plant than can be secured by the people of the village of Oakfield, which gets its power for its lights from the city of Fond du Lac. The engine also serves to fill the pressure tanks which carry water to every part of the farm and the modern farmhouse and tenant's house. Besides his electric light plant Mr. Bristol also has gasoline gas in the house which he uses for cooking purposes and can use for lighting purposes if he desires.

The cows on the Bristol place have yielded large returns each year in milk besides the calves, an average profit of $130 and over. Accurate records kept from year to year have shown Mr. Bristol where the mistakes have been made and where the profits in his operations have come from and through persistent efforts the increase in the latter have made his farm one of the most efficiently managed places that are breeding Holsteins in Wisconsin.

Standards of Service

In rural communities clusters of mail delivery boxes at the crossroads evidence Uncle Sam's postal service. Here the neighbors trudge from their homes—perhaps a few yards, perhaps a quarter mile or so—for their mail.

Comprehensive as is the government postal system, still the service rendered by its mail carriers is necessarily restricted, as the country dweller knows.

Long before rural delivery was established the Bell System began to link up the farmhouse with the neighboring towns and villages. One-fourth of the 10,000,000 telephones in the Bell System are rural. They reach more places than there are post offices. Along the highways and private lanes the telephone poles lead straight up to the farmer's door.

He need not stir from the cheerful hearth ablaze in winter, nor grope along dark roads at night for friendly news or aid in time of trouble. Right in the heart of his home is his telephone. It is the American farmer's key to the outside world, and in no other country is it found.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Lessons in Farm Management.

Facts Brought Out in Rock County Where Great Interest Is Being Taken in Subject of Farm Management---By Allen B. West.

THE round-up of the Rock County Farm Management Contest occurred on March 29th, at Janesville, at a meeting arranged by the Farm Improvement Association, of Rock county, under whose auspices the contest has been conducted in coöperation with the University of Wisconsin. Rock county and a portion of Waukesha county are doing unique work in that they are bearing the expenses of the contest by forming associations, the fees of which help to pay the expense, the work in these counties being so great that it cannot be handled by the University force.

The farm contest work in Rock county began in 1913, when three farms entered the contest. This year fifty-four farms were on the list, and, in spite of unfavorable weather conditions, the figures showed great advance over those of the preceding years. The average income of these fifty-four farms, after deducting 5 per cent interest on the investment for the year 1916, was $804, and the average income on the best three farms was $3,636.

Part of the meeting was devoted to a study of the figures, to learn wherein the best three farms had the advantage over the average for the county, and the following facts were brought out:

First—They had a larger investment of capital, the three having an average of forty more acres of land.

Second—A larger income from crops, one average being $692 and the other $2,172.

These sums were found by adding the sums received from sales and the value of the increase as shown by the inventory.

Third—A slightly larger income from dairy products, one averaging $1,320, the other $1,596.

Fourth—Income from live stock, one averaging $1,613 and the other $3,857.

The farm expenses were naturally greater on the larger farms.

The figures on the dairy receipts showed that it was not the dairy to which these farms were indebted for their profits, and suggested that improvement might well be made in the future in the quality of cows kept, for in the case of the average farm the receipts per cow just about balanced her expense of keeping. On the three best farms their receipts only were about $10 in advance of the others.

The Janesville Machine Company offered the prizes, which were awarded as follows:

First prize—H. C. Yale, Milton Junction, Janesville corn planter.

Second prize—W. E. Scofield, Edgerton, Janesville disk harrow.

Third prize—Noyes Raessler, Beloit, riding weeder with grass seed attachment.

Fourth prize—Horace Pease, Edgerton, Janesville cultivator.

Fifth prize—Fred Gaarder, Orfordville, Janesville walking plow.

Professor Otis, in discussing the lessons taught by the contest, showed a series of charts, giving the results on two farms of about the same size, with similar market conditions and about the same amount of pure-bred stock of the same breed.

On one of these farms the income, aftering paying 5 per cent interest on the investment, was, in round numbers, $4,000; on the other it was $800. The crop receipts showed that the farm with the smallest income had the best crops. There was about the same amount invested in live stock in each case and the money received from live stock products indicated that both farms had stock that produced well. The great difference was found in the receipts from the sale of live stock and from the inventory of increase in stock. Analyzing the cause for this difference, it was found that the man with the smallest income had spent $11 in advertising; the other had spent $245.

The lesson was plain. A farmer must apply business principles if he wishes to make money commensurate with his investment. The man who made $4,000 belonged to a cow-testing association. He sold his cows on their records, and his bulls on the records of their dams. He showed at fairs and used printer's ink for advertising, as any live business man does.

Another set of figures showed how a man with a good farm, raising good crops, lost out because he fed his crops to poor cows, that did not give him the returns that were secured on other farms where the crops were not so good, but the stock was better.

Inspiring addresses were given by Mr. H. M. Jones and his wife, Mrs. Nellie Kedzie Jones. Mr. Jones discussed rural community development, and his advice was along the line of the lesson from the two pure-bred stock farms.

Farmers must get together in business enterprises if they wish success. Cow-testing associations, breeders' clubs and community advertising are important factors in community development. For many years farmers have been shipping milk to the city and taking what the dealers give them. Now, as the results of organization, the farmers instead of the milk dealers are settling the price.

The matter of the community should be, "All for each and each for all."

Mrs. Jones' topic was, "Dividing the Dollar," and was a discussion of the division of the family income, with especial emphasis on the provision for the higher life, books, music, religion, education—the things that make living worth while.

The following men were elected as the executive committee of the improvement association for the coming year: K. Overton, W. E. Scofield, M. S. Kellogg, W. J. Dougan and E. P. Coon.

PROTECT YOUR CATTLE WITH Blacklegoids

NO DOSE TO MEASURE.
NO LIQUID TO SPILL.
NO STRING TO ROT.

BLACKLEGOIDS are small pills. Each pill is an accurate dose of blackleg vaccine.

BLACKLEGOIDS are easily administered—simply inject them under the skin with a vaccine injector.

TAKE NO CHANCES.

Don't wait until your calves become infected. This means certain loss—there is no *cure* for blackleg. Vaccinate now—before the deadly disease shows itself.

THE COST IS SMALL.

BLACKLEGOIDS are economical. The expense is trifling compared with the loss you are liable to sustain if you do not use them.

ORDER THROUGH YOUR VETERINARIAN OR DRUGGIST.

Write for free booklets on Blackleg, with full information about Blacklegoids.

KENDALL'S SPAVIN TREATMENT

A

Known for 40 Years as Kendall's Spavin Cure

A New Name But the Same Old Reliable Remedy

FARMERS and horsemen everywhere will be glad to know that this change is in the *name only*—that there is no change whatever in the famous old-time formula that has rendered such remarkable service in horse ailments—Bone Spavin, Ringbone, Splint, Curb, Sprains and Lameness—by the counter-irritant method.

Whether you get Kendall's under the old label or the new, the quality and efficiency is the *same* old reliable—with a 40-year-old reputation.

Get it of your druggist—$1.00 per bottle—six for $5.00—and ask for book "Treatise on the Horse"—or write

DR. B. J. KENDALL CO.
Enosburg Falls, Vt.

SPEED IN SILO FILLING

Extra large throat. Cutter head with four knives. Unusual capacity. Self-feeding. Can't clog—automatic governor makes it impossible.

Smooth, steady action. Safe, strong, simple; a quality machine. Write for illustrated literature.

Rosenthal Corn Husker Co.
BOX 15
MILWAUKEE, WIS.

In and Around Wisconsin.

Dairymen at Superior, Wisconsin, have decided to withdraw the usual "summer prices" on milk and maintain the "winter prices" through this season. This amounts to a substantial advance in milk prices for the producers, who claim they must have more money in order to make a profit on their investment in cows, feeding costs and labor necessary.

The Kewaunee County Buttermakers', Cheesemakers' and Dairymen's Association held their annual meeting at Kewaunee a short time ago. Legislative bills of interest to the association members and sanitary methods of handling milk and milk products were the subjects discussed. The officers elected for the ensuing year are: A. W. Teske, president; Matt Koller, vice president; L. J. Blahnik, secretary, and Ben Stinhorst, treasurer.

The Neillsville Dairy Association has recently been organized by milk producers in the region of Neillsville, Clark county. All milk producers are eligible to membership upon payment of a fee of 25 cents. Although one object of the association is to secure favorable prices for milk, it is also interested in promoting all phases of the dairy industry. The following officers were elected: Wm. Naedler, president; Geo. E. Crothers, vice president; E. A. Viergutz, secretary, and Frank Greeler, treasurer.

A consignment of Wisconsin-fed western lambs sold at the high price of $15.25 just recently in Chicago. There were 120 animals in the lot and their average weight was eighty-six pounds. Originally the lambs came from Montana, but they were purchased by the college of agriculture at Madison and fed on the university farm there. Several other instances of record prices for Wisconsin-fed lambs have occurred recently which indicate the growing importance of the Badger state in the sheep-feeding industry.

Encouraged by the promise of continuing high prices for their crop, Wisconsin tobacco growers are preparing to plant a considerably larger acreage this spring, according to a statement of the agricultural experiment station, at Madison. The Wisconsin tobacco crop is grown principally in Dane, Rock, Vernon, Crawford, Columbia, Monroe, Chippewa, Jefferson, Richmond and Trempealeau counties. More than 500 acres are devoted to the crop in each of these counties and there are many other counties of the state that are engaged in the commercial production of tobacco, although to a smaller extent.

Rapid strides are being made in the work of organizing live stock shipping associations in the territory surrounding New Richmond, St. Croix county, where a farmers' packing plant is located. Already associations have been formed in nineteen towns and Mr. Moore, manager of the plant, hopes to have the work entirely finished in a short time. It is reported that live stock have been coming into the plant regularly and in good numbers since the break in cold weather, and a large daily kill from now on is anticipated. Since the farmers have shown such enthusiasm in the work, the officers of the plant are predicting a bright and prosperous future.

The high cow in the testing associations of the state for February was a grade Holstein, belonging to Elmer Christianson, a member of the Winchester association, Winnebago county. This cow produced 109.4 pounds of fat. A herd of ten cows like this would return $500 for the butter fat alone. The Troy and East Troy association, Walworth county, had ninety cows of the forty-pound class, taking the state record in this division. In the month of February the Waupaca association bought two cars of feed, the Alto association bought two cars, the Winchester association bought three cars and the East Fond du Lac association one car. There is an increased interest in the purchase of cows which have been under test in associations and have shown good records. Feeding is the big problem for the official tester to work out, and some interesting facts have been learned as shown by letters now being published in The Wisconsin Farmer. Some of the high records made for the month of February are shown below:

Grade Holstein owned by Albert Rhoda, Troy and East Troy Association, 75.9 pounds of butter fat.

Jersey owned by Ed Bruins, Alto, Fond du Lac County Association, 79.2 pounds of butter fat.

Grade Guernsey owned by J. W. Thrall, Winnebago County Association, 78.2 pounds of butter fat.

Grade Guernsey owned by Louis McGrath, Chilton Association, 71.9 pounds of butter fat.

Holstein owned by A. P. Kaye, Linn, Walworth County Association, 92.2 pounds of butter fat.

Grade Holstein owned by J. L. Chapman, River Falls and Roberts Association, 71.8 pounds of butter fat.

Grade Holstein owned by Hugo Libke, New Holstein Association, 73.4 pounds of butter fat.

Grade Guernsey owned by M. J. Wrolstad, Alban and New Hope Association, 71.5 pounds of butter fat.

Grade Holstein owned by Frank Smalley Stanley Association, 99.7 pounds of butter fat.

The above embraces those in the state having a record of seventy pounds of butter fat or better.

ADVERTISEMENT.

$6,434,327,214.07

ACCORDING to the Commissioner of Internal Revenue, U. S. Treasury Department, the above figure represents the sum of money paid in cash to the United States Government in internal revenue receipts from 1862 to 1916, inclusive, by the manufacturers of malt and distilled liquors.

It is an uncomprehendable sum. It is beyond the grasp of the human mind.

But every penny was paid in advance of the sale of the manufactured goods and the revenue went toward the support of the various departments of the Federal Government.

Surely no person can deny that this industry has paid liberally in dividends to our government.

But large as this sum is, it is small compared with the amount that all branches of the industry have paid during these same years in local and State license fees.

It is impossible to secure the exact figures of this sum as is the case with the U. S. revenue receipts, but authorities estimate that the amount is double and perhaps three times as great.

It yields to each licensing community a large part of its total revenues and if the sum could be ascertained it would be staggering.

In addition to these, are the local and state taxes. Brewing, distilling plants and property used in the retail sale of the products are all assessed high, and much of this value, and consequently much of the tax accruing, would be lost in case of the destruction of the industry.

Paying so generously through all these years and encouraged to thrive and develop and pay more; forced to exert every energy to meet the conditions imposed and to earn the fixed dividends which the government demanded; developing and building from its own share of the profits **only**, *does it now seem one tithe more than a fair deal to give* **Compensation** *in the event of utter destruction of the entire business?*

Think *that* over!

Holstein Sale at Coon Valley.

RUNDAHL BROS. will close out their herd of grade Holstein cattle at their farm near Coon Valley, Wis., Thursday, April 26th. The offering will consist of 57 head, most of which are females and none over seven years old. Of this number 24 are in milk and five heifers are due in the near future. There will be a few good yearling heifers. The Rundahl Brothers own considerable land, but like many others they cannot get competent help, so they have decided to sell off their dairy cattle. Registered bulls have always been used and the cows are bred to a good, registered bull of good breeding—see advertisement on page 29. The cows gave as high as 43 pounds butter fat in January. All but three have been bred and raised by the Rundahls, so you will have a chance to buy cows that have made good for them. The cows have been tested and can be shipped out of the state if so desired. If you want to get some grade Holsteins on a small investment, attend this sale. Coon Valley can be reached from Sparta or La Crosse, returning after the sale. If you are interested write Rundahl Bros., Coon Valley, Wis., for further description and sale list. Remember the date, April 26th.—Adv.

Walter George Chester Whites.

WE have just located another Chester White herd that can be classed among the best in the state—owned by Walter George, Evansville, Wis. Evansville can be called the Chester White headquarters of the state, there being three good herds in that vicinity. Mr. George has a good herd boar called Rainy Day. He is a yearling with more streech than the average Chester and he has good back and feet, and with proper care should make a creditable showing this fall. He is by Callaway's Favorite, he by the noted champion, Wyckoff Lad. His dam is by Callaway's Combination. Mr. George has a good, big sow that he purchased in New York, being by Oriskany Boy 22833, he by Ohio Boy 21419. This is a fine sow and has a nice litter by Rainy Day. Another good sow is rich in Chief Select breeding. One of the best litters on the farm is by Perfect Prince, that good boar owned by Wm. Schiebe. This breeder has a nice lot of spring pigs coming on, and, as he is a good caretaker he will have a nice lot to offer prospective buyers a little later. Get your order in now. Mention this paper. —Adv.

Make Valuable Purchases.

MR. E. SWAN, of Wauwatosa, has recently purchased the bull calf, Pabst Hengerveld Pontiac, from the Pabst Stock Farm, Oconomowoc, Wis. This calf is royally bred, being sired by King Pontiac Champion, with about 50 A. R. O. daughters to his credit and out of Pabst Hengerveld de Freule, with a record of 30.38 pounds in seven days. Mr. Swan, in his selection, adhered strongly to the Korndyke strain through the Pontiac family, and, as King Pontiac Champion is one of the best sons of King of the Pontiacs, he is building his future on the line-breeding theory, in which he can make no mistake. The Pabst Stock Farm has also sold to Mr. Milton P. Jarnigan, representing the Georgia State College of Agriculture, Athens, Ga., a young bull calved April 29, 1916, by King Pontiac Champion and out of Lulu Hartog De Kol, with a butter record of 28.55 pounds of fat. Mr. Jarnigan has bought from the Pabst Stock Farm before. This calf is an extra good individual and will help to bring more buyers to this part of the country.—Adv

The Stubley Jerseys.

WHEN it comes to Jerseys, Fred Stubley, Black Earth, Wis., is one of the good breeders in the business. He certainly has a working herd, for at the time we were there he was milking 50 cows. Just at this time Mr. Stubley will sell a few heifers, bred and open. They are sired by Double Time Varsity King out of the noted Double Time cow and they are bred to a son of Golden Maid's Viscount, he by the widely-known Golden Maid's Prince. If you want a bull Mr. Stubley can supply your wants by shipping you a good one by a good sire and out of a high-producing dam. The cows in this herd are of the best imported and American breeding and many of them have A. R. records. Notice the advertisement that appears in this issue and write him for particulars.—Adv.

Louie Reese Polands.

LOUIE L. REESE is a Poland China breeder living near Brooklyn, Wis., and unless we miss our guess, he is a "comer" as a Poland breeder. He has at the head of his herd a good two-year old sired by the noted Iowa boar, King of All. He is big and smooth and is siring a nice lot of big-type Poland Chinas. Two gilts by him sold in the Madison sale for $100 each going to Messrs. Smiley and Martiny respectively. Mr. Reese has some good, big sows of A Wonder, Big Orange and Long Bob breeding and they are raising some nice litters. Keep this herd in mind for future reference.—Adv.

McDonald's Poland Chinas.

ON March 16th we received a letter from J. D. McDonald, North Bend, Wis., advising that he was having excellent success with his Poland China pigs. At that time he had 116 pigs with nine sows yet to farrow. Miss Price 4th, one of his fine show sows, farrowed and is raising nine fine pigs. Mack has some fine fall boars for sale, well fed and well grown, boars that will do to show, and they are priced to sell. It would be well for you to get your order in early for a spring pig. Write your wants and please mention this publication.—Adv.

Fond du Lac Holstein Sale.

OUR reader will not fail to see the Fond du Lac county Holstein sale advertisement which occupies pages 16 and 17 in the center of this issue. Good old Fond du Lac county with her splendid and conscientious breeders and her great wealth of finely-bred, high-producing Holstein cattle is putting on a sale at Fond du Lac, April 26th and 27th, which may well command the earnest attention of the successful dairymen of this state. It is unnecessary for us to repeat in this field note any detailed description of the offerings which are described in detail in the advertisement above referred to. The consignors are men of splendid reputation in their county and in the state of Wisconsin and men whose success in breeding Holstein cattle has caused their names to be carried far beyond the confines of this state. We will have more to say concerning this sale in our next issue. Catalogs for the sale will be ready April 15th and we suggest that our readers sit down at once and write Mr. S. H. Bird, sale manager, South Byron, Wis., and ask him for a copy. Please be sure to mention The Wisconsin Farmer in your letter.—Adv.

Hawthorn Farm Suffolks.

THE largest collection of registered Suffolk horses in this country is to be found on Hawthorn Farm, Lake county, Ill. Both imported and home-bred animals are to be seen there in abundance. Fifty odd breeding mares are kept in the stud, and this sturdy English horse can be seen in all his strength and vigor. The Suffolk is a valuable horse, one whose merit is not known to many of our American farmers. They have sufficient size, are tireless workers, very docile and all good solid color. They are adapted to all soil and climatic conditions, and are a sure enough draft horse. A handsome catalog of the Hawthorn Suffolks, as well as giving information regarding other breeds of live stock raised on this big breeding farm, will be sent to any address upon application if you write Hawthorn Farm, as per the advertise Hawthorn Farm, as per the advertisement on page 29. Kindly mention this paper when you write.—Adv

Good Profits in Drilling Wells.

MEN who take up the business of making wells for watering stock or for irrigation make a good income, usually from $15 to $50 a day. Many farmers bore or drill wells during that part of the year when farm work is slack. The most important thing is a good outfit. It may be run either by horses or by engine power, depending on which is most convenient. Small investment and easy terms make the outfit pay for itself in a surprisingly short time. Those who are interested are requested to write to the Lisle Manufacturing Company, Box 902, Clarinda, Iowa, for their free illustrated circular showing the different styles of machines which they put out. See advertisement on page 18.—Adv.

Free Construction Catalog For Silo

THE farmer who is planning to erect a silo should investigate the In-de-str-uct-o metal silos, which are designed to withstand all wind, storms and rain and preserve the ensilage in the most careful manner possible. The construction catalog of the E. W. Ross Co., Box 354, Springfield, Ohio, explains this silo in detail and should be in the hands of every prospective silo builder. See the advertisement on page 19 and write for the catalog today. Possibly you know several farmers who want silos. If so write to the Ross Company for their terms to agents. There is a big opportunity in handling the In-de-str-uct-o metal silos and it will pay you to learn of the proposition. —Adv.

Ship Stock to Washington.

ON March 22d, H. B. Drake & Son, of Beaver Dam, Wis., shipped a carload of Short-horn cattle to Hershberger & Steel, Oroville, Wash. The shipment consisted of three yearling bulls, and the balance were cows and heifers. The shipment consisted of three yearling bulls, and the balance were cows and heifers. The shipment is intended for the foundation of a fine herd to be built up in the far West. Last fall the same Wisconsin firm sold a carload of good ones to Lewis F. Crawford, Sentinel Butte, N. D. This was the second load H. B. Drake & Son had sold to Mr. Crawford.—Adv.

Free Book on Choosing a Piano.

A PIANO in the farm home provides an opportunity for the children to learn to play and furnishes recreatioin for young and old alike. By careful selection, an instrument may be secured for the home at a very reasonable cost. In order to assist those who are interested in choosing a piano, the Hobart M. Cable Co., 253 Cable St., La Porte, Ind., have issued a book on this subject. All music lovers, whether accomplished pianist or beginner, will find valuable information in this book. Get a copy for your household at once by writing to the company named above. See page 23.—Adv.

Short-horn Heifers For Sale.

DON'T overlook this opportunity if you want Short-horn heifers. Females of this breed that can be bought are scarce and it will pay you to write P. U. Collins, River Falls, Wis., for a description and price of the heifers that he has for sale. They will not be on the market long, so get busy. Please mention The Wisconsin Farmer. Adv.

Steam and Gas Tractors For All Purposes.

THE Red River Special line of steam and gas tractors have an enviable reputation for doing all kinds of farm work in the most satisfactory way. Nichols & Shepard Co., Battle Creek, Mich., are makers of these engines and they have been in business continuously since 1848, so that their knowledge of engine construction is based on long experience. Farmers who are interested in farm engines should write to this company for their free literature, which includes their catalog and a paper that gives the opinions of farmers with regard to the use of tractors and engines on the farm. See the advertisement on page 2 and write today. —Adv.

Get Your New Silo Now.

IN the advertisement on page 18 the Indiana Silo Company, 618 Union Building, Anderson, Ind., is making the suggestion to farmers to buy or contract for a silo now if they will want one in the near future because there is all probability that the increase in price of materials will soon make them much more expensive. That company has a proposition whereby a silo may be contracted for now and delivered whenever it is wanted. It would be well for those interested to write to the company for this proposition. Anyone who would like to have the agency of these silos in his territory should alos write to the company at once, as there are still some openings which offer excellent opportunities.—Adv.

Buy Percherons.

IF you wan't a black or a gray Percheron stallion, L. P. Martiny, Chippewa Falls, Wis., has them. The gray is a three year old with great scale, a stallion that should make 2,200 pounds and right in every respect. A good top and middle, very heavy bone and a good sire. The black is a horse full of quality and one with an outcome, though not so drafty as the gray horse. Now is the time to buy your stallion for service this spring and these horses will please you. Mr. Martiny has been doing light work with these horses so they are hardened and have not been pampered for sale. Write for further description, and if interested go see them. See page 29.—Adv.

E. H. Parker & Son Buy More Short-horns.

WE have just been advised by Kiser Bros., Oregon, Wis., that they have sold to E. H. Parker & Son, noted Duroc breeders, of Janesville, eight yearling heifers. We saw these heifers a short time ago and they are a likely lot, five rich roans and two reds and Messrs. Parker are fortunate in getting this lot. This will give the Parkers a herd of about 20 females, as they purchased a number of good heifers a few months ago.—Adv.

Book of Facts on the Viking.

THOSE who are looking for an efficient cream separator will find it well worth their time to get the free book of the Viking cream separator and read it over carefully. This separator is advertised on page 18 of this issue by the Morley-Murphy Hdw. Co., of Green Bay, Wis. It is noted for its large capacity per dollar invested in it and for its speed and ease in skimming. The book contains facts and figures on this matter which will prove very interesting to you. Send for it at once.—Adv.

Own an Ensilage Cutter.

THE farmer who has his own ensilage cutter can fill his silo when the proper time comes without waiting for his neighbors or some traveling crew to do it for him. This is a tremendous advantage at times and it will pay him to consider getting a good cutter. The big catalog of the Jos. Dick Mfg. Co., Box 211, Canton, Ohio, will help him a great deal in this matter. It explains the principles involved in building different kinds and sizes of silo fillers and cutters and describes the "Blizzard" outfit in detail. The advertisement is on page 18 and the catalog will be sent free to anyone on request.—Adv.

Free Service of Heating Experts.

READERS of The Wisconsin Famer have an opportunity at this time to secure the advice of heating experts on the problem of heating their homes in the most satisfactory manner. The L. J. Mueller Furnace Co., 204 Reed St., Milwaukee, Wis., who have manufactured heating systems and studied heating problems since 1857, will give without charge the service of their experts to anyone who will write them in response to their advertisement on page 8. Mail your request to the company on a postal card or in a letter. There is no obligation in this matter and the advice they may be able to give will pay for the trouble many times over. Take advantage of this liberal offer today.—Adv.

Carpenter & Carpenter Buy Canadian Cattle.

WE have just had a letter from Floyd Carpenter, junior member of the Short-horn firm at Baraboo, Wis., Carpenter & Carpenter, advising that he has just returned from Ontario, Canada, where he purchased a number of choice Scotch cows and heifers to add to their herd at Baraboo. This firm has one of the good herds in the state and with this valuable addition their Short-horns will command a preëminent position.—Adv.

Strawberry Plants.

STRAWBERRY lovers will find the offer of 200 fine strawberry plants for $1.25 by J. L. Todd & Co., R. F. D. No. 3, Des Moines, Iowa, an especially tempting one. The lot includes 25 of the delicious Everbearing strawberries, 75 Dunlap, and 50 each of two other choice varieties. A practical book of instructions on planting and growing strawberries is given with each order. Send in your order. See page 25.—Adv.

HENRY ANTHES, Fort Atkinson, Wis., has a herd of pure-bred Holsteins which is known from coast to coast from the fact that he has owned some of the most popular animals of the breed. Mr. Anthes formerly owned Johanna McKinley Segis, a bull that now stands at the head of the Carnation Stock Farms herd. Mr. Anthes is consigning two heifers sired by a 33-pound bull, out of the best daughter of Johanna McKinley Segis, to the Lake Mills consignment sale, May 8th and 9th. Uneeda Korndyke Abigail Boy

Our Farm Help Column

The Wisconsin Farmer realizes the seriousness of the farm-help problem in the grain-belt states. In an effort to help our readers, this paper will publish for a limited time names and addresses of those who are in need of farm help, and also names and addresses of those who want jobs on farms. Will our readers who desire help please be as explicit as possible in their letters as to the kind of a man they need, whether for general all-round farm work, dairying, grain farming, live stock, and whether single or married man is wanted? Our readers will kindly conduct correspondence direct, using the addresses below in which they may be interested. Names will be published only once.

FARM HELP WANTED.

L. J. Nowotny, Elberon, Iowa, general farm work, single man, salary $40.
Watson A. White, Peshtigo, Wis., general farm work.
O. L. Johnson, Oregon, Wis., Route 2, man and wife (no children) wanted.
G. J. Stodala, Coleman, Wis., single man, salary $38.50.
T. F. Carmody, Mt. Hope, Wis., general farm work.
R. J. Romkema, R. F. D. 2, Sheldon, Iowa, general farm work.
Ernest N. Ganser, R. R. 1, Lodi, Wis.
F. Darl, R. 3, Sta. C. Box 353, Milwaukee, Wis. One single man and one married man, both dairymen.
Roy Gross, Taylor, Wis.
J. Roy Gordon, R. R. 2, Mineral Point, Wis.
T. A. Hubbard, Wellington, Kan. Grain and stock farm.
Howard M. Drake, Dombey, Okla.
John H. Stockdale, R. R. 1, Mineral Point, Wis.
A. E. Wright, R. R. 2 Hampton, Iowa.

FARM JOBS WANTED.

Paul Clements, R. F. D. 1, Box 28, Hutsonville, Ill.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE OFFER

TO STALLION MEN who are looking for a good stallion to put on the stand a lot of stallions that will please the most critical. Our two-year-old black and dark gray Percherons weigh now up to 2,100, with the bone and conformation to carry their weight. Our Belgians are big and the right type. We now offer Bizzarrie, our 2,350 five-year-old imported herd header. This horse is the best we ever owned. A great stallion for someone. We now offer ten head of stallions from six to ten years old at sacrifice prices, as we won't carry any aged stallions over. We also offer one five-year-old imported Shire stallion for less money than he could be bought in Europe. Wanted to buy 50 head of big drafty stallions, one coming twos. Write us what you have. Send 25c in stamps for large horse hanger. All horses at big discounts till sold out.

50 Head including 14 choice daughters of Sir Johanna Colantha Gladi, who is from one of the good daughters of Pontiac Korndyke and sired by a son of Colantha Johanna Lad and Pontiac Gladi (32 lbs. at 4 years).

Daughters also of Pledge Spofford Calamity Paul, Butter Boy Johanna De Kol, Count Segis Bellewood, Artis Walker De Kol, Annette Hillside Pietje, etc.

Good business cattle. All over 6 months of age tuberculin tested.

Sale managed by

LIVERPOOL SALE AND PEDIGREE COMPANY, Incorporated

LIVERPOOL, N. Y.

26.64-lb. Holstein Bull

TEN months old, sired by Sir Parthenea Champion and from the 26.64-lb. 3-year-old heifer, Parthenea Jolie Clothilde De Kol. Four other young bulls from A. R. O. and untested cows, 7 to 10 months old. We also offer for sale our senior herd sire, 8 registered and yearling heifers and bull and heifer calves. We produced 16 A. R. O. cows last year, several from 20 to 28 pounds. Come and visit our herd and see the sire and dams of these animals.

ADAM LORENZ **SHEBOYGAN FALLS, WISCONSIN**

HEAD YOUR HERD WITH A W INNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.

BAIRD BROS. - - - - **WAUKESHA, WISCONSIN**

HOLSTEINS AND GUERNSEYS

NORTON FARMS **R. R. 11** **FRANKSVILLE, WIS.**

Guaranteed Holstein Bulls

FROM 1 to 11 months of age, out of large record A. R. O. cows. They are sired by the great bulls, King Artis Pontiac and King Korndyke Veeman, that have records in their pedigree from 30 to 41 lbs. butter in 7 days. They are priced to sell.

Wisconsin Star Stock Farms **Ed M. Schultz, Hartford, Wis.**

"WHERE PRICE AND QUALITY MEET"

HOLSTEIN BULL CALVES by 32-lb. sires from A. R. O. dams. Popular breeding, good individuals. $100 up. Write and mention Wisconsin Farmer.

TULLOCH & FRIES' HERD **GENOA, WIS.**

WE OFFER NOW FOR SALE

DAUGHTERS of Sir Johanna De Colantha De Kol 53056. We have 4 heifers about 6 months old out of him for sale. Price $600. They are nicely marked, well grown and backed by A. R. O. records and rich breeding. We also have a few heifers bred to a 33.68-lb. bull for sale and also several cows bred to the same bull. Prices on application. Inspection invited.

B. F. Winckler & Sons **Medina, Wis.**

HOLSTEIN BULL FOR SALE

HOLSTEIN BULL, born Oct. 14, 1916. Good A. R. O. records on both sire's and dam's side. Nicely marked, about one-half white, straight, good size, ready for light service about May 15th. For pedigree and price apply to Mountain Ash Stock Farm, J. B. Cain, Prop., Glenbeulah, Wis.

HOLSTEIN HEIFER CALVES

HIGH-GRADE Holstein heifer calves; am in position to furnish single or car load shipments of selected well-marked calves at $18.00 to $20.00 a head. Also pure-bred bull calves. Send cash with order. Address S. E. Jones, Watertown, Wisconsin.

REGISTERED HOLSTEINS

A NICE lot of young bulls closely approaching serviceable age. Can spare a few females. Sires, University Johanna Excell and King DeKol Lyons. (Registered Poland China hogs).

Marinette County Asylum - Peshtigo, Wis.

OLATHE HOLSTEINS

HAVE a few bull calves from A. R. O. dams for sale. Address Silver Spring Farm Co., Eau Claire, Wisconsin.

REGISTERED HOLSTEIN HEIFERS

FROM 5 months to 15 months of age sired by the 31.17 lb bull, Sir Wayne Johanna De Kol. Two bull calves also for sale. Address

Lawrence Robers **Lyons, Wis**

JERSEY CATTLE.

OAK GROVE JERSEY FARM

OFFERS for sale bull calf, dropped Feb. 5, 1917. Solid color, black tongue and switch. Sired by a son of Noble of Oakland 95700. Dam has a R. of M. record of 594 lbs. 10 oz. butter as a two year old. Write for particulars or come and see him. Address

W. M. Knight **Eagle, Wis.**

Registered Jerseys

HAVE some bull calves for sale from one to eight months old, from tested cows and cows on test. Ten cows averaged 53 pounds of fat on association test for March. Prices reasonable.

E. Bruins - - Fairwater, Wisconsin

ELMDALE FARM . . . JERSEYS

REGISTERED bulls ranging in age from 9 to 15 months, sired by Inez Rosarie's Oxford, from heavy producing cows of choice type and breeding. Send for pedigrees, description and price.

H. Holt & Son **Oconomowoc, Wis.**

REGISTER OF MERIT JERSEYS

BULL and heifer calves from cows that made over 700 lbs. of 85% butter, and by Sophie's Emblem, a grandson of Sophie 19th, and son of Lass 40th, with 1,005 lbs. of 85% butter. For further information write O. R. & K. T. Wiegand, Cleveland, Wisconsin.

JERSEYS

COWS and heifers, register of merit—breeding. One or a carload. I am a breeder, not a dealer.

E. E. WYATT - - - TOMAH, WIS.

Registered Holstein Heifers

HEIFER calves and young cows for sale. Ten daughters of the 24.12-pound bull, Sir Korndyke Zoldusky De Kol, that has 10 A.R.O. daughters. He is a grandson of Hengerveld De Kol, that has 116 A. R. O. daughters. These heifers are bred to the 40-pound bull, Johanna King Segis, a son of the 40-pound cow, Johanna De Kol Van Beers. Yearling bulls and younger from A. R. O. dams with records from 14 to 30 pounds. High-grade springers and young cows. Write us your wants.

H. F. McNutt **Oxford, Wisconsin**

REGISTERED HOLSTEIN BULL

AND heifer calves sired by Pabst Canary Pontiac Champion 142885, and out of well-bred heavy-producing cows. Call and see our herd or write

WM. FENNER, SHEBOYGAN FALLS, WIS.

10 YEARLING BULLS 10

EXTRA well grown, good individuals and nicely marked, all more white than black, sired by good sires and from heavy-producing dams with records from 19 lbs. to 23 lbs. Priced for immediate sale from $100 to $150. Don't wait to write.

W. H. S. Rhoda, 610 3d St., Watertown, Wis.

Hillside Stock Farm

5 REG. Holstein cows and 2 heifers; 24-lb. bull 16 mos. old, 7-8 white, faultless individual; also noted Pontiac herd sire.

Kirkpatrick Bros. **Reedsburg, Wis.**

STATEMENT OF THE OWNERSHIP,

management, circulation, etc., required by the act of congress of August 24, 1912, of The Wisconsin Farmer, published weekly at Des Moines, Iowa, for April 2, 1917.

State of Iowa, County of Polk, ss.

Before me, a Notary Public, in and for the state and county aforesaid, personally appeared A. W. Wickham, who, having been duly sworn according to law, deposes and says that he is the Assistant Business Manager of The Wisconsin Farmer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Publisher—James M. Pierce, Des Moines, Iowa.
Editor—James Atkinson, Des Moines, Iowa.
Managing Editor—James Atkinson, Des Moines, Iowa.
Business Manager—James M. Pierce, Des Moines, Iowa.
Assist. Bus. Mgr.—J. W. Wickham, Des Moines, Iowa.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

The Wisconsin Farmer Pub. Co.
James M. Pierce, Des Moines, Iowa.
Dante M. Pierce, Des Moines, Iowa.
Frank Dunning, Bedford, Iowa.
J. L. Parrish, Des Moines, Iowa.
R. L. Parrish, Des Moines, Iowa.
B. N. Waller, Des Moines, Iowa.
J. H. Mather, Chicago, Ill.
R. S. Bibb, Kansas City, Mo.
A. T. Cole, Kansas City, Mo.
J. C. Loehr, Lone Tree, Iowa.
F. S. Dunshee, Des Moines, Iowa.
I. M. Duffield, Des Moines, Iowa.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.)

Bankers Life Ass'n, Des Moines, Iowa.
Louisa Bird Hyde Estate, Des Moines, Iowa.
Equitable Life Ins. Co., Des Moines, Iowa.

J. W. WICKHAM,
Assist. Bus. Mgr.

Sworn to and subscribed before me this 2d day of April, 1917.

The Final Step in Keeping Horses Off the Farm

GUARANTEED four-horse working ability in any farm work. Demonstrated twice the daily plowing ability of four horses—seven acres a day against three and a half to four acres with big, strong horses. Equally superior efficiency in all other work. Use it twenty-four hours a day if you want your farm work done quickly. No fear of dead horses in hottest weather. No expensive cost for feed, veterinary or stabling.

The wonderful ability of your Ford converted into money saving, profit earning work without injury to your car for pleasure driving — and with actual cash savings up to 50% over the cost of doing the work with horses.

Sell Your Horses

Put all your farm work on the basis of mechanical efficiency. Do your plowing, listing, discing, drilling, harvesting with Staude Mak-a-Tractor. It takes the output of five acres to support one horse—twenty acres to support four horses. Turn these wasted twenty acres into cash in the bank. And get bigger yields from your entire farm by doing your farm work with Staude Mak-a-Tractor.

A Guaranty of Service

The special Staude tractor radiator, six times as efficient as the Ford radiator—and the patented force feed oiler furnished with every Staude Mak-a-Tractor guarantee real service.

We would not think of selling you our attachment without these big features—no tractor attachment can operate satisfactorily without them.

With them you get perfect tractor operation and a wonderfully improved Ford.

20 Minutes Makes the Change

It takes only 20 minutes to change your Ford touring car or runabout to a tractor—the same time to change back—less time than it takes to hitch up four horses. And for every two teams of four horses you can use one Staude Mak-a-Tractor. This is a real saving—in time, in actual money. Anyone who can drive a Ford can drive a Staude Mak-a-Tractor. Get one for your farm now.

Built for Work

Staude Mak-a-Tractor is built for the hardest work. The driving power is applied to keep all strain off the Ford and get the utmost working ability. The hitch is extra wide to get the pull where you want it without side draft.

The working parts are built of the finest materials—to last under all kinds of work.

Do not be content with half-way measures. Staude Mak-a-Tractor is owner-proved, time-tried, for your benefit.

Order Today, Start Low Costs Now

Plan to do your Spring work this year with Staude Mak-a-Tractor. Save real money from today on. We are prepared to ship your Staude Mak-a-Tractor as soon as we get your order—as soon as you can get in touch with our nearest dealer. If you do not know his name, write to us—we will send him to see you at once.

But don't lose the money that you can save by doing what 22,000 farmers have already done—by buying Staude Mak-a-Tractor.

THE SEED BED FOR CORN.

More Can Be Accomplished by the Use of Tillage Implements Before Planting Than Afterwards With the Cultivators.

WISCONSIN farmers are preparing to do their full part in augmenting the world's food supply this year. There will be a large acreage of small grain seeded and every effort should be made to raise a bumper crop of corn because where conditions are favorable a greater weight of grain can be raised from an acre of corn than from any of

GOOD WORK WITH THE PLOW WILL HELP.

the cereals. Satisfactory prices are already absolutely assured and no obstacle should be allowed to stand in the way of planting a large acreage. Where acclimated varieties are used an enormous quantity of merchantable corn can be produced in Wisconsin and, in addition to the grain, there will be an abundant supply of fodder, a product that can always be utilized to splendid advantage by dairymen as well as beef producers.

At the present time we are face to face with the problem of preparing the seed bed for the corn crop, and in discussing this matter we are well aware of the fact that circumstances and conditions will alter the plans of any man. However, there are a few fundamental principles that we can well afford to roll over in our minds, because the character of the seed bed has so much to do with crop yield. Unless the seed bed is right, there will be a big struggle all season, and even then the yield is apt to be disappointing, because of the sturdiness of weed growth. While early plowing ordinarily is to be preferred, there is no need of theorizing on a matter of this kind, because where much corn is produced on a given farm, some of the plowing is done early and some of it is not. Where it is possible to put on an extra team and get the soil turned, there is then an immediate chance for weeds to grow. In this connection attention should be called to the importance of getting the seed bed into shape just as soon as possible after plowing. Where the soil is at all friable, this can be done with a harrow, and where the seed bed is right, weeds will make the best start. Then comes the work of destruction with the disk or with any surface-cutting implement. While we greatly admire the efficiency of the harrow as an implement to get the soil into shape, it will not do the work satisfactorily when once weeds become well rooted. It is necessary to be more heroic and to use heavier implements, so that everything is uprooted.

Sometimes, in the rush to get soil plowed early, old stalk ground is not worked down on the surface before plowing, but this is a mistake. A good disking means that the furrow slice will make connection with the lower soil in much better shape, so that water will move to the rootlets more quickly from beneath. This is particularly important in the case of stiff soils, and it is not unusual to find that the practice of disking an old cornstalk field will increase the yield anywhere from ten to fifteen bushels per acre as compared with the other plan of plowing the soil, while the winter-created crust has been unmolested. We are accustomed to think of a

THE HARROW WISELY USED IS AN EFFECTIVE IMPLEMENT.

mulch on the surface, but it is a fine thing, also, to have a mulch under the furrow. In the end no more labor is involved in bringing the seed bed into good condition for the simple reason that a soil that has been well disked before being plowed will work up into good shape much more quickly than one that has not been disked.

The question involving the depth of plowing presents itself to every man as he drives into the field for the first time. Here again the character of the soil is a modifying factor. On clays and clay loams it is a mistake to go down too deeply in the spring, because that means the bringing of much inert material to the surface and growth on such a soil will not be as active as it will be where friable, weathered soil surrounds the surface roots. A five or six-inch furrow on these types of soil is plenty deep enough. Moreover, with the acreage that will be put in this year, there is not horse power enough to handle it properly, if we undertake to send the plows in seven or eight inches. Where one individual proposes to handle fifty or sixty acres of corn, he will find it entirely impracticable to plow a deep furrow, excepting in those cases where the work is done with a tractor. Where the soil is sandy, plowing deeply does not require so much horse power, and there is no objection to burying the trash to considerable depth. The air penetrates such a soil more freely in any event, and there is in this instance a real advantage in having a fairly deep seed bed.

When the plowing has been done, and the harrow freely used to get the seed bed into condition for weed growth, the early plowed soils will have to be disked and in this connection attention should be called to the fact that there is a right and a wrong way to disk a mellow soil. Above all else, it should not be ridged, and this can be avoided by double disking, lapping half each time across the field. If single disking will do the work, and the chief aim is to go over the ground quickly, then the harrow should follow the disk immediately. We have found that where single disking is practiced, and the soil becomes baked afterwards, it is then absolutely impossible to work out the furrows made by the disk. If the ground is immediately harrowed crosswise, however, this leaves the surface soil in fairly good condition and, of course, the practice of single disking saves considerable labor at a time when covering the ground is the most important matter of all.

It is scarcely necessary to emphasize the importance of using the harrow freely just before planting, assuming, of course, that no weeds have yet started. Our best farmers invariably emphasize the importance of this implement. We have in mind one individual who has been

THE PLANTER SHOULD BE FOLLOWED BY THE CULTIVATOR IF THE GROUND IS WEEDY—BLIND PLOWING.

exceedingly successful as a corn grower and who believes that every time he harrows his seed bed previous to planting, he increases the yield anywhere from two to five bushels per acre. It firms the soil and possibly has something to

(Concluded on page 7.)

CURRENT EVENTS

THE war situation remained practically unchanged during the past week. Congress was hastening preparations to put the United States on a war basis, particularly as regards men, munitions and money. Both houses of congress seemed favorable to a bond issuance of $5,000,000,000, to be divided between the necessary war expenses of this nation and a loan to the European powers which are fighting Germany. It was announced that a great international war council would be held in Washington within a fortnight or so, England sending a delegation headed by Arthur J. Balfour, former premier and now minister of foreign affairs, the French delegation headed by M. Viviani, now minister of justice, formerly premier. The English delegation will include Admiral de Chair, of the British navy; General Bridges, of the army, and the governor of the Bank of England. It is assumed that owing to the difficulties in passage and the probable delay, the interests of other allied governments will be confided to their resident ambassadors. Beyond the statement that the object of the commission is to discuss general questions of policy connected with the war no information was given at the state department. It was made clear, however, that in no way will the United States government depart from the traditional policy of avoiding anything in the nature of political alliances, though, of course, that does not exclude full and intimate military and naval coöperation in the prosecution of the war. Up to the close of the week there had been no actual hostilities between the United States and Germany, although German submarines were reported as being in American waters, in both the Atlantic and the Pacific oceans.

BRITISH victories in the western front, in Europe, in what is coming to be known as the battle of the Arras, were marked during the past week. The big British push succeeded in recapturing a long line of trenches from the Germans and between 10,000 and 15,000 prisoners, besides innumerable cannon. The Canadians, in particular, covered themselves with glory, taking one of the most strongly fortified German positions, which was the key to an important section of the battle country. The British tanks, or armored tractors, were again in use and were highly successful. Even the cavalry got into the fight in the open, the Germans being pushed back such a distance that twelve miles of trenches were taken in a single day. It was said everywhere along the attacking line that the Germans appeared to have been taken by surprise, and only in a few instances did they put up a strong fight. One reason for this was that they had been fairly dazed by the British artillery fire of the preceding ten days.

A BOND issue by the United States government of $5,000,000,000 has been practically agreed upon by the financial leaders of congress. Of this amount $2,000,000,000 will be loaned the European countries at war with Germany (England, France, Russia and Italy) without interest or any charges. Bonds of a similar amount issued by these foreign countries will be taken as security and the funds thus available will be applied to the purchase of arms and munitions to help the allies in the field. The loan will be America's immediate contribution to the allied cause, with the promise of other bountiful contributions of money, munitions and foodstuffs to come as needed. The forthcoming bond issue, it was authoritatively said, will be placed before the public as quickly as possible in denominations down to $100, possibly to $25, will bear "a reasonable interest rate," and the entire army of America investors—banks, corporations and individuals, will be afforded an opportunity to subscribe. Treasury department and federal reserve board officials believe that a $5,000,0000,000 bond issue can be absorbed without difficulty by American investors and it is likely that this will be the first sum offered.

BRAZIL and Cuba have followed the lead of the United States and are now formally at war with Germany. Cuba was the first of the Latin-American countries to range herself alongside the United States. About the same time the president of the little republic of Panama, signed a proclamation committing that country unreservedly to the assistance of the United States in the defense of the canal. The proclamation declared: "Our indisputable duty in this hour of history is of a common ally, whose interests and existence, as well, are linked indissolubly with the United States. As the situation creates dangers for our country, it is the duty of the Panama people to coöperate with all the energies and resources they can command for the protection of the canal and to safeguard national territory." Brazil was led to take action against Germany by reason of the sinking of the Brazilian steamer, Parana, by a German submarine. Forty-six German ships are interned in Brazilian ports and these will doubtless be seized as has already been done with the German ships interned in American ports. Active support of the United States by at least two of the five Central American republics and possibly by four, would not be surprising. Official reports that Estrada Cabrera, president of Guatemala, is contemplating seriously a break with Germany have been received. So long as Mexico's course is indefinite unusual interest is attached to the position of the Central American governments, especially Guatemala, controlling the southern frontier of Mexico.

NO STRIKES or labor disputes of any kind during the war is the program of the labor committee of the council of national defense, headed by Samuel Gompers, president of the American Federation of Labor. In a report unanimously adopted by the council it is declared that "the defense and safety of the nation must be the first consideration of all patriotic citizens." It is proposed that whenever emergencies arise requiring a change of standards, such changes should be made only after investigation and approval by the council of national defense. Since the labor committee membership includes both leaders of organized labor and representatives of influential employers, its action is interpreted as giving the United States promise of complete freedom from industrial disputes such as hampered England early in the war. Even when there was danger recently of a protracted railroad strike, the union men declared their willingness to defer matters if war should arise and the nation should find itself helpless as a result of the proposed strike. A wave of patriotism is sweeping across the country such as has not been seen for several decades.

ALIGNING itself once more with Germany, Austria severed diplomatic relations with the United States last week, the American officials being given their passports by the Austrian government and the Austrian officials being given theirs by the United States government. Immediately the treasury department in this country ordered the seizure of all Austrian merchant ships in American harbors. The Austrian crews were taken off and sent to immigration stations and American guards put on board. The measure was explained as purely one of precaution, but it is realized that it may be interpreted by Austria as an act of war. In a similar situation after the break with Germany, no ships were seized until a state of war actually had been declared.

THE anti-German allies are well supplied with munitions and men for their immediate needs, the administration has learned, and, therefore, the immediate assistance to be rendered by the American government will consist in sending bread, meat and money, and in providing ships to convey food supplies to Europe. The placing of an embargo by Argentina on some forms of foodstuffs has lessened the supply for the remainder of the world, and expected shortages in the United States have impressed the administration with the necessity of doing everything possible to increase the output of live stock and necessary grains.

A HISTORY OF THE PERCHERON HORSE.

Six Hundred Pages of Text and Two Hundred Illustrations.

There has just come from the press under the above title a volume that will be of special interest to draft horse breeders, notably to those who are breeding Percherons. The authors, Mr. A. H. Sanders and Wayne Dinsmore, secretary of the Percheron Society of America, have succeeded admirably in putting between the covers of one volume the important facts of Percheron horse history. Mr. John Ashton, a continental authority on Percheron horse history, has aided in the preparation of this volume, securing as he did in France all available documents that would tend to throw light on the early origin and development of the modern draft horse type. The cordial coöperation of the French government was also obtained and permission was given to photograph valuable historical manuscripts. Many documents were discovered that have been entirely overlooked in the past by those who have undertaken to write Percheron history. Indisputable evidence appears in this volume proving that for practically a hundred years France has coöperated cordially and effectively in the improvement and development of Percherons. Since the middle ages special emphasis has been placed by the farmers and breeders of the province of Perche on the development of a horse that combines speed with ability to move heavy loads.

This volume contains a detailed history of the Percheron in the United States and Canada, reference being made to all those who have had an important part in the development of the breed in the past as well as those who are advancing its interests at the present time. This volume is beautifully illustrated and it should find a place on the library shelves of every lover of draft horses. It sells for $2 and The Wisconsin Farmer will be pleased to wait upon those who are interested in the matter.

If in doubt regarding the condition of your soil have it analyzed. Write to the soils department, college of agriculture, Madison, Wisconsin.

SHOES FOR FARM WEAR

The Wisconsin Farmer

THURSDAY, APRIL 19, 1917.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

SOME THOUGHTS FOR WISCONSIN FARMERS.

I REALIZE, of course, that present conditions are abnormal so far as the prices for farm products are concerned, but I am also confident that even after the war is over prices for foodstuffs will not again sink to their former level. I am reminded in this connection of a remark of the late James J. Hill's that seems prophetic. He said, a few years ago: "Inside of twenty years America will go to bed hungry unless greater attention is paid to agriculture."

Even if we were not in the midst of the greatest war of history, with its consequent withdrawal of millions of hands from the plow, food production for 1917 would still fail to keep pace with the world's increasing population.

This is due to several causes. In America it has become a fad to say that this is because farm life has not been made sufficiently attractive to hold the young folks. But I am inclined to take this statement with several grains of salt in these days of automobiles, rural mail delivery, telephones, and all the other comforts and conveniences of farm life. It is true that farming is hard work, early and late, the year round, but it pays well. The hardships of pioneering are things of the past, and so I believe that there is a lot more theory than fact in this uproar about the young folks being driven from the farm home by its unattractiveness. It has been my experience that the young folks who leave the farm in nine cases out of ten go to a much less attractive existence than that of the old home, and I believe they are coming to appreciate this fact.

While there is unquestionably much to be said for the effort to keep boys and girls on the farm, I do not believe it is going to be as great a problem in the future as in the past, and that it is to be reached more by changes in our school system, which has educated young people away from the farm instead of back to it, rather than by preaching exclusively the gospel of greater attractiveness for the farm home.

The truth is that the question of increased agricultural production in this country has resolved itself largely into a problem of more intensified farming, which means either fewer acres better cultivated, or a larger labor supply. It used to be that the opening up of new lands took care of increased production, and I can easily remember when there were almost millions of acres of virgin soil put under cultivation each year. But with the passing of the old frontier, with its new lands and high promises, that time is gone. It is now largely a question of greater yields on the lands that are under cultivation.

It is true that we will be able to increase dairy products in Wisconsin somewhat by putting our northern cut-over lands under the plow, but outside of that the problem is one of better feeding and more scientific methods. Wisconsin has raised little wheat for twenty-five years. In 1916, Wisconsin farmers sowed 100,000 acres of winter wheat and had about 107,000 acres in spring wheat. This year, owing to prevailing high prices, the acreage will probably be increased, but the fact is that, while we are furnishing the butter, someone else must furnish the bread.

It is a fair question as to whether Wisconsin is raising as much corn and wheat as she should, and perhaps there are many who wish they had put in winter wheat last fall, but in this state, as well as elsewhere, the question of grain production is largely one of more bushels to the acre. The same principle applies to live stock and other foodstuffs, which are decreasing while the hungry mouths of the world go on increasing in spite of wars.

I am afraid too many farmers are farming in a haphazard way. They are working hard, but hard work will not do it all. Many of them could accomplish better results with less work if there were more planning, more study of the conditions and needs of the soil, the stock and the growing crops —in a word, more efficient business management.

My friends, our opportunities have been enhanced by war, but the success of farming in the Wisconsin of the future does not depend on war, thank heaven! I do not expect to see the time when farm prices in normal times will descend to the low level of former years, or when good, careful, practical farming in Wisconsin will fail to yield splendid profits. Is it not then our duty, as well as our privilege, not only to do our part to help meet the food shortage of the world, due to temporary conditions, but to farm right along, year in and year out, with an eye single to increased yields per acre, greater returns from our live stock investments and such increase in our farm values as is sure to result to the farmer who keeps his place up in the very best of shape? I think so and I am sure that every one of you who will stop to consider the matter will agree heartily with me.

THE NEW SPIRIT OF WISCONSIN BANKERS.

THE contrast between the Wisconsin banker of a quarter of a century ago and the banker of today has been brought forcibly to my attention by the recent address of Mr. George D. Bartlett, secretary of the Wisconsin Bankers' Association, at the banker-farmer conference in Madison. Most of us know of Mr. Bartlett today as a prominent figure in Milwaukee's financial circles, but it was not many years ago that he was a banker in the town of Stanley, Chippewa county. The breadth of vision which he acquired at his desk there has been his most valuable asset in his larger work of directing the activities of the state association and of leading the bankers of the state into a better appreciation of the agricultural and live stock possibilities of Wisconsin.

It is certainly one of the most encouraging signs of the times for agricultural Wisconsin to see the changed attitude of the country banker towards his farmer constituents. Well do I recall the feeling of dread and awe with which we used to approach the country banker of a quarter of a century ago for a loan. Going to the dentist was a pleasant task compared with walking up to the country banker and asking for $100 for sixty or ninety days. And, as I recall it, the average country banker of those days did not make the ordeal any easier by his attitude, for he made his loans with somewhat the air of a king granting a favor to one of his humblest subjects.

But all that is changed and today the Wisconsin banker and farmer are more like joint partners in a business, each dependent on the coöperation of the other for his fullest measure of success. The different relationship was brought home to me when I read a poster, sent broadcast throughout the state recently, one paragraph of which read:

> Ask your banker for money. Wisconsin banks stand ready to loan, at fair rates, money needed for live stock, for new silos, to clear or drain land, or for other productive purposes.

I also see, from time to time, such encouraging advertisements in Wisconsin local papers as, "We solicit the accounts of farmers" and "When in town make our bank your home," etc., all of which are signs that the world moves and we are living in an age of new business relations and a new spirit of mutual dependence.

I do not want to be understood as poking fun at the old, conservative banker. He lived in a different age, amid different conditions, and if he has changed it has been in no small part, because the Wisconsin farmer has also changed and is a more dependable customer. It was the part of the earlier bankers to build up and conserve the financial resources of this state, to establish sound credits and to teach safe business methods when there was much temptation to wild-catting. They did this work so well that today no Wisconsin farmer has to worry about getting money if he has a "productive" proposition.

The secret of getting money in Wisconsin is whether or not one can make it earn more money. There are plenty of funds lying in Wisconsin banks for the farmers who can show that they know how to farm, that they are willing to work and can make their investment pay good returns on the money loaned them. The country banker welcomes such customers and is glad to know that their number is increasing yearly. Bankers have come to a realization of the fact that their business can be just as profitably and just as safely enlarged through agricultural as through industrial channels. It is well, both for the banker and the farmer, that this is true, for both are dependent on it for making the most of their opportunities. Only recently I heard a banker at Monroe say that ninety-nine out of a hundred farmers in his neighborhood could borrow from $100 to $1,000 on their personal notes without security. When farmers are regarded in this way by their banker friends, borrowing money becomes merely an incident in the day's work.

I am delighted that Wisconsin is producing so many bankers of the new school, such as Mr. Bartlett, to whose address I referred above. I feel that these men are patriotic and public-spirited in their desire to help advance the agricultural interests of the Badger state. I have read many of the bulletins which they have sent out to the farmers of Wisconsin and I believe that they will accomplish a great deal of good. I hope that my readers will secure these monthly banker's bulletins and read them carefully, for they contain the best in current agricultural thought and expression. Those who read them cannot fail to profit, and they will form only one more link in the tie that binds the farmers and bankers of Wisconsin so closely together for mutual advantages.

WISCONSIN FARMERS ARE BUSINESS MEN.

NOTHING makes me more provoked than to have somebody speak of a Wisconsin farmer and a Wisconsin business man as being two entirely different types of men, having nothing in common. They ignore the fact altogether that to buy land at $100 to $250 an acre, pay $500 for a good "lord of the herd," and invest in other things in proportion and then make the investment pay reasonable returns, takes just as much business sagacity as any other line of commercial activity in our state. I am glad, indeed, that the day has come when the Wisconsin farmer is a business man and the Wisconsin business man takes an active interest in farming.

I wonder if those people, who set the farmer over against the business man as an altogether different kind of human being, ever stopped to think, or ever knew to begin with, that three of the greatest business men this country has produced were farmers. I refer to the late Marshall Field, "the world's greatest dry goods merchant;" John G. Shedd, now the head of Marshall Field & Co., and Frank W. Woolworth, "the world's greatest retail merchant." I am indebted to a series of articles in Leslie's Weekly for some interesting facts, showing how the farm has produced America's greatest business men.

Both Marshall Field and his successor, John G. Shedd, started out in life as farm boys, going from the farm to a counter in a country store. Today the store which the first established, and which the second now manages, does a business of over $100,000,000 a year, employs some 20,000 people and serves as many as 300,000 customers in a single day. If farm life were so inimical to the business instinct, would we find two farm products making the world's greatest retail store such a notable success? I think not.

The career of Frank W. Woolworth, the proprietor of 1,000 5 and 10-cent stores in the United States and Canada, is a magnificent object lesson for young men. Let me quote the introduction to the article descriptive of him in last week's Leslie's:

> A barefooted American farm lad made up his mind that he would rather work behind a counter than behind the plow. He was so green and gawky and awkward, so palpably a "hayseed" that, try as he might, no merchant would engage him at any wage. But the boy had such determination and doggedness that he agreed to serve for nothing, living meanwhile on his painfully earned capital of $50. So complete a failure did he prove at selling goods that in his next job his small pay was reduced instead of increased. But, though he agreed with his boss that he was a misfit as a salesman, he did not give in. He stuck. Today he is the largest retail merchant in the world.

Later on in the article Leslie's quotes Mr. Woolworth himself, on his early days, as follows:

> I was born on a farm at Rodman, New York, but we moved to Great Bend, New York, when I was seven years old. We were so poor that I never knew what it was to have an overcoat in that terribly cold climate, I never knew how to skate because I hadn't the money to buy skates. One pair of cowhide boots lasted a year, or rather six months, for the other six months I went barefooted. My parents and theirs, for I don't know how far back, were Methodists, and I was brought up under the strictest discipline. I attended school in the winter and worked all summer. There isn't a thing on the farm that I haven't done. Often while I was sweating in the hayfield, I could hear the boys near by playing baseball, but the only chance I ever had of playing ball was during the recess at school in winter.

I am pleased to be able to set forth these facts here in this page of mine in The Wisconsin Farmer. There is undoubtedly many a boy on our Wisconsin farms today who has the same business instinct and sagacity that Marshall Field had and Frank Woolworth has. They need encouragement. Far be it from me to say a word which would lure any boy from the farm, where his father has trod the furrows before him. But the boy who has the commercial instinct and sagacity developed to an unusual degree, and who yearns for a chance to demonstrate these talents in a store or a factory rather than in the marketing of farm products, should be allowed to follow his natural bent. At the same time, I believe the day is already here when business sense and acumen can be used to every bit as

(Concluded on page 5.)

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Wisconsin Farmers Win Another Milk War.

The Dane county farmers residing in the vicinity of Stoughton and furnishing milk for the Wisconsin Dairy Products Company were notified on Wednesday, April 11th, that their demand for the Chicago scale had been granted. This means $2.40 per hundredweight for April, $2 per hundredweight for May, $1.60 per hundredweight for June, $2.12 per hundredweight for July and $2.30 per hundredweight for August and September. This is an average of $2.12 per hundredweight for the six months' period and is the highest average ever paid for milk in this territory. It is 5 cents higher per hundredweight than the Chicago district scale for the preceding six months and considerably higher prices paid to those outside of the organized milk producers' association. In most cases the companies which handle condensed milk are getting the added price out of the consumer. The condenseries are everywhere advancing their prices. The rule which has heretofore been adhered to to lower milk prices in May and June will not be effective in many states this summer. Already distributors of milk have announced in several states that they will maintain winter prices throughout the summer. There is a suspicion that they intended to do this anyway and hence the farmers are justified in getting their share of the advance. The justification of the farmers, however, is on a much broader basis than this. It has cost and will continue to cost the farmer a great deal more money to produce milk and hence he is entitled to higher prices. It has been hinted that the advanced price may curtail consumption. However, the food value of milk is so great and so well understood and the demand for food at this time is so heavy that we do not look for any failure on the part of consumers to take up all the milk which will be offered even at the new prices.

The Duty of the Hour.

The war in Europe hinges today, as never before, on agricultural production. The nations which can produce the most foodstuffs will undoubtedly win the titanic struggle. All the authorities, both of the national government and of the various state colleges of agriculture, are urging American farmers to exert themselves to the utmost, in order that America may do its share toward feeding and clothing the world.

In this crisis, the patriotic American farmer will make every acre yield to its utmost. Never was there a time when it was more important tnat every farmer should read a thoroughly practical and dependable farm weekly. We believe The Wisconsin Farmer measures up to every requirement. We, therefore, urge upon all our readers that they attend to the important matter of subscription, renewing without delay if their subscription has recently expired or will shortly expire. We hope also that every reader of The Wisconsin Farmer will induce at least one friend or neighbor to begin taking the paper, to the end that the practical teachings in this paper may reach a still larger number of farmers and agricultural production be still further enhanced.

Renew your subscription today and secure at least one new subscriber for The Wisconsin Farmer. This is the patriotic duty of the hour.

Quitting School to Sow Wheat.

There has been some talk of the young men quitting school to go to war. H. E. Pierce, of Pierce county, Wisconsin, is quitting the Wisconsin College of Agriculture because of the war, but he is not intending to join the ranks of the soldiers. On the contrary, he expects to return to the home farm and sow eighty acres of spring wheat. Here is what Mr. Pierce says about it:

Providing I can get the right seed and the soil is in shape to work well, there will be at least eighty acres of our home farm sown to hard spring wheat this season.

We can dispense with a maximum amount of land for pasture and hay, this year, as our supply is large enough to accommodate all the stock we carry. Last year was especially good from the hay production standpoint, so we can afford to put all our energies into raising food crops. Spring wheat and corn will both be planted, but as labor is a big problem the former crop will take the preference.

There is not much talk, but a good deal of promise of action, in these remarks by a Pierce county, Wisconsin, boy. A few more such boys and we would produce enough spring wheat this year to help out at least a little. This young man will doubtless profit more by his decision than he would by remaining through the spring months in the classroom.

Hints For Wisconsin Dairymen.

The Wisconsin Dairymen's Association, through its field men, H. C. Searles and Noel Negley, has issued a "Ten Commandments" for members of Wisconsin cow-testing associations. Here they are:

1. Screw up every separator to skim a cream testing 35 per cent and save more skim milk for the chickens, calves and pigs.
2. Urge members of your cow-testing association to feed each cow as an individual and give them all better care. It will save feed and make more milk.
3. Urge your members not to start pasturing too heavily. Give the grass a chance, even though feed is high.
4. Encourage keeping as many cows as possible. If the herd must be reduced because of feed shortage, "can" the least efficient. She will serve humanity better as a "canner" than a "milker."
5. Use your spare time to help your members in their work. Many sections cannot get labor at any price.
6. Urge members who grow tobacco as a side line to grow corn or other food crops. They take less labor and are good for man and beast.
7. Save manure and get it on the land now. It will make larger crops this year and next.
8. Advocate better and tested seed, and better preparation of the seed bed. It is late, but not too late to test seed corn. You can test corn as well as cows—do both.
9. Advise every member to plant enough crops for his herd the coming year. Feed will be high, and each farm should support itself, if possible.
10. Branch out. Be a leader in your section. If you do not know, find out. You have a splendid opportunity to serve. Remember seventy other testers in Wisconsin are leading food producing regiments.

Pretty good hints, we must all admit. Will we try to live up to them?

Wisconsin Legislature.

The Wisconsin legislature has passed an act known as "Assembly File No. 627," establishing a state council of defense. Members of this council are to include one representative of manufacturing interests, one representative of labor, one representative of the farmers, one representative of the bankers, one woman who shall represent the Red Cross, a physician, one representative of the railroads, one trained engineer, an adjutant general, and two citizens at large. The governor is given the power to remove any member at any time and fill the vacancy, and it is intended that this Wisconsin council shall coöperate with the national council of defense and carry out in the state of Wisconsin such plans as shall be mutually agreed upon. It is also intended to coöperate with defense bodies in other adjoining states. One section of the law reads as follows:

When in the opinion of the council a serious scarcity of food, fuel, or other articles of common necessity exists or threatens by reason of actual war in which the country is engaged, or when in the opinion of the council unreasonable or excessive profits are being made through the manufacture or supply of necessities for common defense or public welfare, in time of actual war, the council shall advise the governor and he shall call a special session of the legislature to make provision for necessary supplies of food, fuel, and other articles of common necessity to be controlled by the state in quantities sufficient to prevent distress among the people, and to prevent and prohibit unreasonable or excessive profits through the manufacture or supply of necessities for common defense or public welfare.

This council has full authority to make investigations, subpoena witnesses, go over account books and files of companies and individuals, and in case of refusal of anyone to accede to the requests of the council the person who refuses may be called before the district court for punishment.

All departments of the state are expected to coöperate with the council of defense. All information secured by the council is confidential unless made public by the governor, and a heavy fine may be imposed upon anyone who gives out any of the secrets of the council.

A GOOD PARTNERSHIP AGREEMENT.

Field Peas For Wisconsin.

Prof. R. A. Moore calls attention to the availability of the canned field pea, grown quite generally through the northern part of the United States, as a human food crop. This pea is especially noted for its protein content, and it is suggested, in the light of the country's needs, that these peas should be grown more extensively, especially on the clay or low soils of Upper Wisconsin. Mr. Moore says there is no use attempting to grow peas on light sandy soils or heavy muck soils. Mr. Moore is of the opinion that peas will maintain a good price at least for several years, as they may be shipped dry with ease and are in large demand for soups. Mr. Moore writes that the Scotch and the Green are two of the very best field peas to grow. Of the yellow variety, the Marrowfat and common yellow rank among the very best. The Prussian Blue is also recommended. Peas carry from 18 to 20 per cent protein, of which 16 per cent is digestible. This with the valuable carbohydrates makes the pea an excellent human food. Professor Moore makes the following suggestions for the growth of peas:

1. Slightly sloping land is better than the level field.
2. Disk as soon as the ground will work well in the spring. A grain drill is the best piece of machinery to use for putting in peas.
3. Sow peas at the rate of 2 to 2½ bushels per acre.
4. Cover thoroughly. Peas can be seeded to the depth of from 2 to 4 inches.
5. It is often a good plan to run a mower over the ground after putting in the crop. A fine tooth harrow should always be run over the loamy soils after rolling. Remove stones, roots and other obstructions so that a harvester can be used.
6. Harvest with a mower with a simple pea harvester attachment. After cutting, peas should remain until thoroughly dried and then they should be loaded into large racks and hauled to the barns or stacked preparatory to threshing.
7. The peas should be cut before they are too ripe—just when the pods have turned brown and some of the pods are yet partially green.

The pea crop will usually average twenty to twenty-five bushels per acre. Field peas can be grown in southern Wisconsin, but are more susceptible to diseases and insects than in the Upper Wisconsin counties. The field pea belongs to that great family of nitrogen-gatherers known as legumes.

A drop of more than 100,000,000 pounds in the stocks of frozen and cured meats in the United States, compared with last year's store, was indicated in the department of agriculture's monthly report. Total stocks of those provisions April 1st were almost 900,000,000 pounds. Increases over last year were reported in the holdings of frozen beef, cured beef and dry salt pork, but the heavy decreases in supplies came in frozen pork, sweet pickled pork, lard and frozen lamb and mutton. In March dry salt pork stocks decreased 16.9 per cent, sweet pickled pork 3.4, frozen lamb and mutton 5.2, frozen beef 13.7 and cured beef 16.8. Frozen pork supplies increased 6 per cent and lard 22.6. Stocks of those provisions reported April 1st were: Frozen beef, 139,529,215 pounds; cured beef, 30,365,487; frozen pork, 62,721,468; dry salt pork, 218,551,175; sweet pickled pork, 326,917,806; lard, 60,691,012, and frozen lamb and mutton, 4,937,131.

FAMILY CIRCLE TALKS—By The Publisher.

(Continued from page 3.)

good advantage on the farm as in the store or office. The farmer in Wisconsin who succeeds is, of necessity, a business man. I believe that firmly. There is no longer a line of cleavage (if, indeed, there ever was one) between the man in the furrow and the feed lot and the man behind the counter and the cashier's wicket. Business is business, whether it finds its vent on a Wisconsin farm or in the city of Milwaukee.

SUMMING UP THE FARM-LOAN LAW.

I FIND that many of my readers write to me, asking the most elemental questions in regard to the new federal farm-loan law, notwithstanding the fact that I have outlined its workings, in detail, in a dozen or more articles within the last few months. Now that the banks are about ready to commence business, perhaps it might not be amiss if I summed up some of the more important information for the benefit of those of my readers who may have missed some of my earlier articles, or have forgotten the salient facts therein set forth.

One of my most recent inquiries came from Mr. W. S. Hill, vice president of the Hill Steamboat Line, of Kenosha, Wisconsin. My reply to him may be of interest to those who are not thoroughly posted on these new banks. Those who have read all my former articles will find this merely a review of the facts already given, but the letters of inquiry continue so numerous, I believe it will be time and space well spent to print my reply to Mr. Hill, as follows:

The country has been divided into twelve districts with a federal land bank located in each district. Wisconsin has been placed in the same district with Minnesota, North Dakota and Michigan, and the bank for these states has been located at St. Paul. Mr. Benjamin F. Faast, of Eau Claire, Wis., is vice president of this St. Paul bank. If you would write to Mr. Faast I have no doubt but that he would give you much interesting and valuable information.

The rate of interest has been fixed by the federal farm loan board at 5 per cent. There will be no additional charge for commission or bonus whatever. The loans are to be made exclusively on farm lands. Loans will be made up to 50 per cent of the appraised value of the land, plus 20 per cent of the appraised value of the permanent improvements thereon. The loans will range from $100 to $10,000 in size and will run from five to forty years. They must run at least five years, although they can be paid off in whole or in multiple of $25 on any interest-paying date after five years have elapsed. The loans will be paid off on what is known as the amortization plan, which means that a small amount will be paid on the principal annually when the interest is paid. I have seen it stated that if 1 per cent of the principal were paid with the interest every year the loan would pay itself off in thirty-three years. This means that were you to pay 6 per cent on your loan instead of 5 per cent the mortgage would never come due, but would wipe itself out automatically at the end of thirty-three years.

The money which the government will loan on these farm lands is to be raised by private subscription to the twelve banks and by the issuance of farm loan bonds bearing 4½ per cent.

It is necessary if you propose to secure a loan that you join with at least nine other farmers to form a national farm loan association. You must then buy stock in your local land bank to the amount of 5 per cent of the loan which you desire. The necessary blanks and papers are now ready for issuance by the government and there should be but little delay in getting the loan once you have entered the local association. I would suggest that you ask for Circular No. 2 issued by the farm loan board, entitled "How Farmers May Form a National Farm Loan Association."

I need only add that the three other federal land banks located in the grain belt are at Omaha (serving Iowa, Nebraska, Wyoming and North Dakota), St. Louis (serving Missouri, Illinois and Arkansas), and Wichita (serving Oklahoma, Kansas, Colorado and New Mexico). Letters addressed to the president or secretary of these banks should bring prompt information. Loans should be negotiated without undue delay, now that the banks are located, the officials named and the bonds almost ready for issuance.

James M. Pierce

A Proclamation by Governor Philipp.

GOV. EMANUEL L. PHILIPP, under date of April 13, 1917, issued a proclamation to the people of Wisconsin calling upon every citizen to do his full share to support the president of the United States in the present crisis. The governor says that whatever may have been our opinions as to the necessity or advisability of engaging in war, such opinions must now be a thing of the past. After reviewing the situation regarding the shortage in food supply, Governor Philipp says:

I urge every farmer in the state of Wisconsin who has suitable land, to plant enough wheat to produce the flour necessary for his own use, and a surplus if possible. I urge that he plant sufficient acreage of corn and, if possible, increase his herd of swine, to produce pork for the market. I particularly urge that the acreage of potatoes be increased. Every farmer should plant enough of this vegetable for his own use, and wherever the soil is suitable he should make his potato field as large as he is able to cultivate.

I urge our farmers, as a matter of patriotic duty, to cultivate every foot of their soil; none of it is too poor to raise something. White navy beans and buckwheat will be in demand—in fact, anything that is food for man or beast will be a contribution to the pressing needs of our country.

Our farmers should require no greater inducement than the present high prices of all farm produce to encourage them in the cultivation of every foot of tillable soil. The fact that no large stocks of food will this year be carried over is in itself an assurance that the price of farm produce will be high for another year, even if peace were immediately declared.

It is reported that in some sections there exists a shortage of seed, particularly potatoes. The department of agriculture of the state of Wisconsin stands ready to act as a clearing house in the matter of seed supply, and all who have a surplus of seed of any kind should so advise Mr. C. P. Norgord, commissioner of agriculture, Madison, Wisconsin; and all who are short of seed of any kind should address the same official, who stands ready with his department to coöperate with the farmers of the state to the fullest extent in the matter of securing suitable seeds to plant the crop.

In order that we may conserve labor for agriculture and the necessary industries I recommend that public work, so far as it is possible, be deferred until such a time as labor shall not be so urgently needed for these purposes as it is at present.

I wish to again impress upon the people of this state that the food situation is so serious that we will commit a moral wrong against our government if we in any way unnecessarily interfere with the production and successful harvesting of our agricultural products.

I ask that all bankers, business men, farmers, societies, agricultural associations, labor organizations and, so far as possible, the schools of the state, interest themselves in the matter of increasing our agricultural products.

I urge that the bankers of the state give aid in the form of loans, in reasonable sums, to farmers who may need assistance either in the purchase of seed or in the cultivation of crops.

I recommend to the people of the cities, towns and villages that they plant liberal crops of vegetables on the vacant property, in order that they may supply themselves and thereby be protected against high prices of such commodities.

I also recommend that the citizens practice all reasonable economy in the conservation of food, bearing in mind that under present conditions food wasted is food taken from someone who needs it.

IN TESTIMONY WHEREOF, I have hereunto set my hand and caused the Great Seal of the State of Wisconsin to be affixed. Done at the Capitol in the City of Madison this thirteenth day of April, A. D. nineteen hundred and seventeen.

Emanuel L. Philipp,
Governor of Wisconsin.

The governor's proclamation is in line with similar admonitions coming from the president of the United States and from the Federal Department of Agriculture. A most practical suggestion is that offering the services of the Wisconsin Department of Agriculture in the matter of procuring seed. We have no doubt this same department through its agencies will make every possible effort to help solve the farm-help problem. In a number of cities, young men are being let out of high schools and colleges a month or six weeks earlier, in order that they may work in the fields. In such cases they are allowed full credit to the end of the term in case their work is up to the standard at the time they are released.

The Wisconsin Farmer has always hoped that war would be avoided. The publisher and his associates have hated to think that it would have to be necessary for us to become involved in the European conflict, but we approve the action of the governor, now that war is declared. Furthermore, we urge our readers to pay due attention to the proclamation of the governor. There is probably no state in the Union where the average farmer knows so well how to make every acre yield to its utmost as Wisconsin. Our people are thrifty people and know how to get out of the land all that there is in it. We urge special attention to the governor's proclamation, to the end that the year 1917 may see Wisconsin produce its largest crop of food staples.

Hurry-Up Call for Spring Wheat.

THE Wisconsin Experiment Station, the avenue through which our state agricultural workers express themselves, has issued an emergency call for more spring wheat in Wisconsin. Their appeal is based on the fact that a world shortage in wheat is inevitable. South America has just harvested less than half of a wheat crop. Argentina, the greatest wheat-producing country of South America, has declared an embargo on wheat because she needs all of her supply at home. There is no doubt that wheat will bring a high price the coming fall. The only thing which might happen to keep the price down would be a declaration of peace and great wheat crops throughout the wheat-growing sections of Europe. Neither of these is anticipated at this time. The emergency call is issued to Wisconsin farmers for the reason that it is one of the few sections of the country where there is still time to sow spring wheat. Many thousands of acres of winter wheat in Kansas and Nebraska will be plowed up because of winter-killing. Wisconsin is asked to make up for the general world wheat shortage by sowing every acre of spring wheat possible. In a very large portion of the state spring wheat may be sowed and raised to advantage. The eastern and northwestern portions of the state are best adapted to spring wheat. Any good loam soil should raise a good wheat crop this year. The ground is well supplied with moisture. Light and sandy soils are not very desirable for wheat. The seed may be secured from local dealers throughout Wisconsin or from the large seed firms. The Marquis, Fife and Blue Stem varieties are recommended. These are standard and are carried by most of the seed houses. Spring wheat should be sown just as quickly as possible. Sow it on fall-plowed land if you have it. Sow one and a half bushels to the acre. The properly prepared seed bed should have a dust mulch on top which will warm the soil and prevent the evaporation of the moisture. Working with the disk, spring-tooth harrow or cultivator, followed by a smoothing harrow, is usually sufficient to put the seed bed in good shape.

Because of the lateness of this emergency call, the word must be passed around just as rapidly as possible. To accomplish this the Wisconsin station has been able to enlist the support of many important agencies. The most unusual form of coöperation, along this line, was the offer of the telephone companies to send word to thousands of farmers through their operators. This work may be just a sentence or two of reminder, but it will serve to arouse an interest in the subject of more wheat and more crops generally. The Wisconsin Advancement Association, the Wisconsin Real Estate Exchange, the Wisconsin Bankers' Association, the Wisconsin Press Association, and the Wisconsin daily league of newspapers, together with all the organizations connected up with the Wisconsin College of Agriculture, are carrying out the message for bigger crops this year, and the emergency call for more wheat will be a part of the message. Billboards are to be used in the rural districts, and moving picture houses in the small towns will call attention to the need of greater production in every line in this state in the year 1917. Whether the late call for more wheat will have a great deal of effect or not is a matter of some question, as most farmers have doubtless already decided what they will put in their fields.

It is the duty of every farmer in Wisconsin to produce as much of the foodstuffs as possible this year. We think it is scarcely necessary to emphasize this matter, as most Wisconsin producers are keen to take advantage of the opportunity presented. There is small probability of an overproduction of any of the staple articles of food. From events as they are now transpiring there appears to be small probability of much reduction in prices of staple foods for another year at least. Wisconsin was at one time second in the production of wheat. The emergency call for spring wheat this year does not mean that other crops must be neglected. Corn, oats, barley, rye, potatoes, sugar beets and tobacco are also of great importance. Let there be no idle land. By using good seed and good culture methods let us get as much as possible out of every acre seeded. We can be patriotic and still stay on the farm.

President Wilson Appeals for United Nation.

Supreme Test Has Come and Every Man, Woman and Child Must Have a Share in the Conflict.

MY FELLOW Countrymen: The entrance of our beloved country into the grim and terrible war for democracy and human rights which has shaken the world, creates so many problems of national life and action which call for immediate consideration and settlement that I hope you will permit me to address to you a few words of earnest counsel and appeal with regard to them.

We are rapidly putting our navy upon an effective war footing and are about to create and equip a great army, but these are the simplest parts of the great task to which we have addressed ourselves.

There is not a single selfish element, so far as I can see, in the cause we are fighting for. We are fighting for what we believe and wish to be the rights of mankind and for the future peace and security of the world.

To do this great thing worthily and successfully, we must devote ourselves to the service without regard to profit or material advantage and with an energy and intelligence that will rise to the level of the enterprise itself. We must realize to the full how great the task is and how many things, how many kinds and elements of capacity and service and self-sacrifice it involves.

These, then, are the things we must do and do well, besides fighting—the things without which mere fighting would be fruitless:

We must supply abundant food for ourselves and for our armies and our seamen not only, but also for a large part of the nations with whom we have now made common cause, in whose support and by whose sides we shall be fighting.

We must supply ships by the hundreds out of our shipyards to carry to the other side of the sea, submarines or no submarines, what will every day be needed there, and abundant materials out of our fields and our mines and our factories with which not only to clothe and equip our own forces on land and sea but also to clothe and support our people for whom the gallant fellows under arms can no longer work; to help clothe and equip the armies with which we are coöperating in Europe, and to keep the looms and manufactories there in raw material; coal to keep the fires going in ships at sea and in the furnaces of hundreds of factories across the sea; steel out of which to make arms and ammunition, both here and there; rails for wornout railways back of the fighting fronts; locomotives and rolling stocks to take the place of those every day going to pieces; mules, horses, cattle for labor and for military service; everything with which the people of England and France and Italy and Russia have usually supplied themselves, but cannot now afford the men, the materials or the machinery to make.

It is evident to every thinking man that our industries, in farms, in shipyards, in the mines, in the factories, must be made more prolific and more efficient than ever and that they must be more economically managed and better adapted to the particular requirements of our task than they have been; and what I want to say is that the men and the women who devote their thought and energy to these things will be serving the country and conducting the fight for peace and freedom just as truly and just as effectively as the men on the battlefield or in the trenches.

The industrial forces of the country, men and women alike, will be a great national, a great international service army—a notable and honored host engaged in the service of the nation and the world, the efficient friends and saviours of free men everywhere.

Thousands, nay, hundreds of thousands of men otherwise liable to military service will of right and necessity be excused from that service and assigned to the fundamental, sustaining work of the fields and factories and mines, and they will be as much part of the great patriotic forces of the nation as the men under fire.

I take the liberty, therefore, of addressing this word to the farmers of the country, and to all who work on the farms:

The supreme need of our own nation and of the nations with which we are coöperating is an abundance of supplies, and especially of foodstuffs. The importance of an adequate food supply, especially for the present year, is superlative. Without abundant food, alike for the armies and the peoples now at war, the whole great enterprise upon which we have embarked will break down and fail.

The world's food reserves are low. Not only during the present emergency but for some time after peace shall have come both our own people and a large proportion of the people of Europe must rely on the harvests in America.

Upon the farmers of this country, therefore, in large measure, rests the fate of the nations May the nation not count upon them to omit no step that will increase the production of their land, or that will bring about the most effectual coöperation in the sale and distribution of their food products? The time is short. It is of the most imperative importance that everything possible be done and done immediately to make sure of large harvests.

I call upon young men and old alike and upon the able-bodied boys of the land to accept and act upon this duty—to turn in hosts to the farms and make certain that no pains and no labor is lacking in this great war.

I particularly appeal to the farmers of the South to plant abundant foodstuffs as well as cotton. They can show their patriotism in no better or more convincing way than by resisting the great temptation of the present price of cotton and helping, upon a great scale, to feed the nation and the peoples everywhere who are fighting for their liberties and for our own. The variety of their crops will be the visible measure of their comprehension of their national duty.

The government of the United States and the governments of the several states stand ready to coöperate. They will do everything possible to assist farmers in securing an adequate supply of seed, an adequate force of laborers when they are most needed at harvest time, and the means of expediting shipments of fertilizers and farm machinery, as well as of the crops themselves when harvested. The course of trade shall be as unhampered as it is possible to make it, and there shall be no unwarranted manipulation of the nation's food supply by those who handle it on its way to the consumer. This is our opportunity to demonstrate the efficiency of the great democracy and we shall not fall short of it.

This let me say to the middlemen of every sort, whether they are handling our foodstuffs or our raw materials of manufacture, or the products of our mills and factories. The eyes of the country will be especially upon you.

This is your opportunity of signal service, efficient and disinterested. The country expects you, as it expects all others, to forego unusual profits, to organize and expedite shipments of supplies of every kind, but especially of food, with an eye to the service you are rendering and in the spirit of those who enlist in the ranks, for their people, not for themselves, I shall confidently expect you to deserve and win the confidence of the people of every sort and station.

To the men who run the railways of the country, whether they be managers or operative employes, let me say that the railways are the arteries of the nation's life and that upon them rests the immense responsibility of seeing to it that these arteries suffer no obstruction of any kind, no inefficiency or slackened power.

To the merchant let me suggest the thought of small profit and quick service, and to the ship builder the thought that the life of the war depends upon him. The food and the war supplies must be carried across the seas, no matter how many ships are sent to the bottom. The places of those that go down must be supplied, and supplied at once.

To the miner let me say that he stands where the farmer does; the work of the world awaits on him. If he slackens or fails, armies and statesmen are helpless. He also is enlisted in the great service army. The manufacturer does not need to be told, I hope, that the nation looks to him to speed and perfect every process; and I want only to remind his employes that their service is absolutely indispensable and is counted on by every man who loves the country and its liberties.

Let me suggest, also, every one who seeds and cultivates a garden helps and helps greatly to solve the problem of the feeding of the nations; and that every housewife who practices strict economy puts herself in the ranks of those who serve the nation. This is the time for America to correct her unpardonable fault of wastefulness and extravagance.

Let every man and every woman assume the duty of careful, provident use and expenditure as a public duty, as a dictate of patriotism, which no one can now expect ever to be excused or forgiven for ignoring.

In the hope that this statement of the needs of the world in this hour of supreme crisis may stimulate those to whom it comes and remind all who need reminder of the solemn duties of a time such as the world has never seen before, I beg that all editors and publishers everywhere will give as prominent publication and as wide circulation as possible to this appeal.

I venture to suggest also to all advertising agencies that they would perhaps render a very substantial and timely service to the country if they would give it widespread repetition. And I hope that clergymen will not think the theme of it an unworthy or inappropriate subject of comment and homily from their pulpits.

The supreme test of the nation has come. We must all speak, act and serve together! Woodrow Wilson.

In and Around Wisconsin

A MOVEMENT has been started at Boyceville by the local union of the American Society of Equity, to build a warehouse for the farmers in the surrounding territory. The community is very much interested in the project and if it is carried out, the farmers should be greatly benefited, since it will provide accommodations which are badly needed in the handling of their products.

THE Burlington milk club of the milk producers' association, now claims the distinction of being the largest local club in the organization. The Waterford-Rochester local club recently voted to consolidate with the Burlington, which makes a combined membership of about 450. The new schedule of prices which will be received during the summer in the territory of this organization averages $2.12 per hundred for milk testing 3.5 per cent.

THE prospect for an increased acreage planted in tobacco this year in the region of Chippewa Falls, Chippewa county, has induced the Hussey Leaf Tobacco Company, of Chicago to plan on building an addition to their local plant in that territory. The outlook is for a business which will practically double that of last year. Farmers in Chippewa county are realizing that there is a good profit in tobacco growing, and are increasing the acreage.

A BRANCH pickling station may be erected at Colfax, Dunn county, in the near future, if the farmers of the surrounding territory will contract to plant a sufficient acreage to furnish the crop. A representative of the Reid-Murdock Co. was at Colfax recently to learn whether or not the community would be interested in the project. About 100 acres tributary to Colfax would be the area needed to supply the station, the individual contracts running from one-half acre to five acres each.

FARMERS near Hayward, Sawyer county, are planning to organize a live stock and produce shipping association, with a view of reducing marketing costs and getting more satisfactory prices for farm products. Such associations are becoming more numerous in Wisconsin and with efficient management have brought important benefits to the farmers. The Hayward organization will be managed by a board of directors and such officers as are needed and an experienced man will be selected to represent its interests in the marketing, listing and shipping of live stock.

THE cow-testing association of Langlade county held an enthusiastic meeting recently and elected the following officers: P. W. Krier, president; Gus Schroeder, vice president; Adam Guenthner, treasurer, and F. G. Swoboda, secretary. John Reckinger was hired as tester for the present year. A discussion of feeding problems was taken up at the meeting with considerable interest. The advantage of a variety in the dairy ration and the saving in buying winter feed in summer and early fall were among the principal points brought out.

A LIVELY interest is being shown this year in the use of "home-grown" seed in Wisconsin, according to officials of the state seed inspection service. Farmers are taking care to clean and grade the seed which they have for sale and on the whole the quality of their product is excellent. There is a large stock in the farmers' hands and it is gratifying to note that the number of transactions direct from producer to consumer is rapidly increasing. The supply of grass and small grain seeds will probably be sufficient for the demand, but peas and beans are apt to be scarce because many were tempted to sell their supply at the high prices which ruled during the past winter.

Upper Wisconsin

TO the Editor:—I have raised Lincoln and Wisconsin No. 1 pedigree oats on clay loam soil and have been very successful with both varieties. I find the Wisconsin No. 1 oats straw stands up best with the rank growth which is made on this soil. Oderbrucker barley is also very successful on this soil.

J. S. Findlayson.

Douglas county, Wis.

TO the Editor:—In the second week of March we held twelve potato meetings in Burnett county. Mr. R. L. Cuff, county agent of Barron county, was with me at five of these meetings. Potato growers' associations were organized at Swiss, Danbury and Webster. In every community we tried to impress upon the farmers the need and advantages of standardizing potatoes in their community. Even though prices for seed stock are high several farmers are starting with a bushel of good, certified seed to be used for a seed plot. We took up the importance of treating seed potatoes, spraying for insects and diseases, the importance of good sprayers, methods of cutting up potatoes, and, in fact, most all the points in connection with the improving of the potato crop. Even though immediate results may not be obtained, such meetings are bound to have a bearing upon the general improvement of the country. Everything that can be said of live stock improvement can be said of potato improvement. Have a standard variety in your community; one that is adapted to your soil. Use the best seed obtainable by selection and then give them good care. By doing this a market will come to you for all your potatoes. Your buyer will give you a premium for your crop if the whole community has the one brand of potatoes. The potato industry has been the principal crop in our county for quite a few years. Owing to the fact that the farmers are not pulling together prices are not always satisfactory. These meetings were held for the purpose of stimulating more interest and getting farmers to raise one standard variety. G. M. Briggs.

County Agent Burnett county, Wis.

THE potato institutes which finished their course on March 31st, at Crandon, have been especially successful this year. The commercial agencies of all the counties where meetings were held coöperated with farm institute officers and with the State Potato Growers' Association in a manner that insured a satisfactory turnout at every meeting. The itinerary of the institutes included Shawano, Oconto, Amberg, Gillette, Mountain, Laona and Crandon. The choice of these cities was made because of their importance as points for shipping and sections where potato interests are coming in for bigger development. Marinette county formed a potato growers' association, with W. E. Morton for its secretary. Forest county formed another association at Crandon, with John Swinehart as secretary, and Shawano formed another, with Merton Moore as secretary. At every one of the institutes the attendance was especially good, a fine interest manifesting itself among the growers. A practical program was carried out at each point. Prof. J. G. Milward, of the college at Madison, had charge of the work. Talks were given on handling the seed stock, seed storage treatment, handling potato soil and summer cultural problems. A complete exhibit of standard potatoes, together with charts and illustrated lantern slides, formed a feature of the institutes. The meetings will be followed up with summer sessions on the fields of members.

The Seed Bed For Corn.

(Continued from page 1.)

do in a mysterious way with the rapid liberation of fertility in the surface soil.

Of course, we must make up our minds in advance that all will not be clear sailing, because many times our work will be punctuated by heavy storms. Most of us will know how to do a great deal better than we will be able to do. There will be thousands of instances this year in the central West where a soil has been plowed and put in shape for planting, and the planting will be delayed a week, ten days, or even two weeks. We are well aware that the weeds ought to be killed before planting, but of the two evils we will prefer to get the corn in the ground and trust to luck to care for the crop afterwards. This, in most cases, will be a wise decision, and wherever it becomes necessary to plant a field at a time when the weeds have already started, blind plowing should by all means be practiced. If two teams are at work, put one on the planter and one on the corn plow, throwing an inch or two of soil over the planted row and stirring effectively all the intervening space between the rows. This will be a serious setback to weed growth, and after the soil has been allowed to remain in this condition a few days, so that the weeds are again starting, give the field a good cross harrowing. If there is time, by all means go over the soil twice. Very few hills will be disturbed, but an immense amount of good will be done by again disturbing the tender weeds and by stirring the soil directly over the corn row. It would add greatly to the yield of corn this year if much blind plowing could be done, because it means in the end that the corn crop will be given about two weeks of a start on the weeds. The corn hills will not be choked out late in the season by weeds that cannot be caught with a cultivator, and every corn grower knows that this, in itself, will vitally affect the yield.

Agencies Behind Beef Campaign.

Several agencies are working in alliance to create practical interest in beef making by farmers and stockmen who have the natural requisites at hand. Foremost among these agencies is the Wisconsin Live Stock Breeders' Association, which, with the Department of Farmers' Institutes, held more than twenty special baby beef institutes in several counties of the state this winter.

Fifteen counties have entered the 1917 junior farmers' contest for the production of baby beef, or early matured animals. Local contests at county fairs will be followed by another all-state round-up at Madison in November, where large prizes will be given to the boys who show the best steers and heifers by farmers' organizations and packing houses.

No less aggressive and practical in their campaign methods for a general extension of beef production are the four state breeding clubs representing Aberdeen Angus, Hereford, Short-horn and Red Polled cattle. Many active members of national beef-breeding clubs are also swinging into line for the meat supply, as are also a number of community live stock associations.

Peat For Fuel

Mr. B. J. Packer, of the immigration department, has been making some inquiries relative to the commercial use of peat fuel. Mr. Packer furnishes us the following letter from Carl Bengtsson, of Chicago, who has had considerable experience along this line:

When I had the pleasure of meeting you at the United States Immigration Station here last Saturday we were talking of peat fuel and you asked me if peat could be commercially utilized for fuel purposes. To this I will answer that any bog (marsh) with a quality equal to the Merrill bog (which is the only one I have tested in your state) can be made into fuel, provided its location is not too far from market. This can be proved with little expense by making a few tons of what we in Europe call "tramp peat," which requires no machinery and is almost as good as machine peat. I will be glad to give a minute description of this method and answer any question pertaining to peat so far as my knowledge goes.

I also have a thorough knowledge of the manufacture of moss litter (stable bedding), and I think the possibilities of this industry ought to be investigated especially in a dairy country. The litter's great capacity of absorbing (often eighteen times its weight) and retaining not only the fluids, but also the gases in the stable is proved to be a real purifier, and the greatly increased value of the stable manure as fertilizer ought not to be forgotten.

Feeding the Cow Before Calving Time.

The proper time to begin feeding a dairy cow is six or eight weeks before calving, and practical dairymen agree that this preparation has more to do with the amount of milk and butter fat which a cow produces during the lactation period than does the feeding during any other period.

For cows calving during the summer or early fall most dairymen like to have a small pasture away from the herd, but with an abundance of grass, and, in addition, they like to feed a suitable grain mixture. Corn silage, with clover or alfalfa hay and a limited grain ration of three parts ground oats, two parts of bran and one part of oil meal is especially good for cows calving during winter or early spring. After calving the cows should be brought slowly up to full feed and thereby steadily to a higher production.—[H. H. Kildee, University Farm, St. Paul.

Attention to Navy Bean.

R. A. Moore, secretary of the agricultural experiment association, is of the opinion that more attention should be given at this time to bean growing by the farmers, especially in the light soil regions of the state.

The navy bean grows easily in this state; it bears a good market price and its food value makes it highly popular. Beans can be kept in storage indefinitely without injury and can be easily shipped to various parts of this country or abroad.

Wisconsin grows only but 15,000 acres, while Michigan has more than 400,000 acres in beans at the last federal census.

These cultural methods for the navy bean in Wisconsin were briefly outlined by Mr. Moore:

Beans follow corn in point of planting time. Usually the first ten days of June is the preferable period.

The ground must be well tilled. If ground is fall plowed it should be thoroughly disked early in the spring, and then gone over with a fine-tooth harrow. The mulch thus made will allow the soil to take in heat to the depth of several inches and sprout the weed seeds. By running over the soil at weekly intervals with a drag the weeds will be killed as they come up. This should be done several times before planting.

Beans do well on new soils and follow clover in rotation to advantage. In sandy soils they may be planted as deep as three inches, but on heavy soils two inches is enough. The regular grain drill will answer the purpose, the beans being dopped about four inches apart in the row.

Bean diseases, such as blight and rust, do not as a rule injure the crop in rotation or when planted on new soil.

Your Battery is the Heart of Your Electrical System

When you press the starter button power goes from the battery to the starting motor, which turns the fly-wheel and starts the engine. The engine runs the generator, which in turn, supplies fresh current to the battery.

The battery is the beginning and end of the electrical system. If it goes dead, the whole system becomes useless.

There is only one way to keep it going and that is to take good care of it.

It must be filled regularly with distilled water, and tested with a hydrometer at least every two weeks.

If it needs repairing send it to me: the work should be done only by experts such as are at every Willard Service Station.

Write to the Willard Storage Battery Company, Cleveland, Ohio, for their booklet, H-4, "Your Electrical System and How It Works," which will also tell you where to find me. Meanwhile ask your dealer about the expert service given at over 900 Willard Service Stations.

The Willard Service Station Man

Willard STORAGE BATTERY

Holds your Ford To the Road

You can drive all day with ease, if your FORD is equipped with an

Irreversible Worm Steering Gear

Absorbs all the vibration, shock and strain your arms and shoulders take up without it; makes a rigid grip on the wheel unnecessary. Especially desirable for women drivers.

Put one on your Ford now —money back if not satisfied.

IRREVERSIBLE WORM STEERING GEAR

The kind that protects all high-priced cars

Locks the front wheels so that ruts and bumps cannot turn them aside. No "leaving the road," "going into the curb" or "turning turtle" with this steering gear. Holds your Ford the way you want it, through mud and sand and on center-crowned roads.

Inexpensive—Easily Attached.
Guaranteed against interference with the mechanism or operation of a Ford.

If your dealer hasn't it, write us. Big opportunity for local agents. Write *today*.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Questions and Answers.

An Electric Burglar Alarm.

Please give drawing and description of an electric burglar alarm attached to doors and windows of a house; one that will operate when the door or window is opened. What are bell magnets, and the armature of the same? The alarm is to operate with dry cells. What size of insulated wire is necessary? Can it be applied to the doors and windows of a chicken house with the same instruments?

Answer.—A burglar alarm may be arranged so that opening a window or door closes an electric circuit and causes a bell to ring, or it may be arranged so that opening the window or door opens an electric circuit and causes a bell to ring. The latter is much the better, especially where the wires must pass between buildings. In the former system all the burglar would have to do to prevent the alarm from operating would be to cut one of the wires. With the latter system the instant he cut one of the wires the bell would begin to ring.

Figure 1 shows how the first system is applied to the lower sash of a window. A thin brass strip T is fastened to the edge of the sash. Two strips of spring brass, S S, are fastened as shown just above the sash when the window is closed. B is an electric bell and D is the battery, consisting of one or two dry cells. When the window is raised the brass strip, T, bridges the gap between the two brass springs, S S, thus completing the electric circuit and causing the bell to ring. A switch may be placed anywhere in the line so that the bell may be shut off during the day. The upper sash may be wired the same way. Number 14 copper wire may be used. The door may be arranged on the same principle, two pieces of spring brass being fastened near the hinge of the door so that they are brought in contact when the door is slightly opened.

FIGURE 1.

The application of the closed system to the lower sash of a window is shown in Figure 2. When the sash is down the electric circuit is closed between the two spring brass strips, S S, by a brass strip on the bottom of the sash. This sends the current from the battery, W W, through the magnet coils of a telegraph sounder and draws the armature of the sounder down as shown. When the window is raised the circuit is broken, the armature, E, of the sounder lifts and closes the circuit between the battery and the bell, causing the bell to ring. Wet batteries of the zinc-copper-blue-vitriol type should be used for this system, as the constant drain of current would soon ruin a dry battery. Either system may be applied to several buildings using the same instruments.

FIGURE 2.

The "bell magnets" referred to in a former issue are the magnets on an electric bell. The armature of the same is the soft piece of iron that bridges the ends of the magnet. This piece of iron is attached to the rod that works the clapper of an electric bell.

Weight of Water Under Pressure.

If water in a closed tank and under an air pressure of twenty-five pounds per square inch be weighed, would it weigh more or less than it would in a tank from which all the air had been exhausted? Is the weight of water the same under pressure as in a vacuum?

Answer.—Under ordinary temperatures and pressures, water is almost incompressible. One cubic foot of water under 100 pounds pressure would not weigh perceptibly more than one cubic foot of water under twenty pounds pressure, the temperature remaining the same. Of course, one cubic foot of water at 40 degrees Fahrenheit will weigh more than a cubic foot at 200 degrees. If water be placed in a tank and all the air exhausted, the water would become steam unless the temperature were below the freezing point. It would, therefore, occupy all the space in the tank, and one cubic foot of the vapor would weigh much less than one cubic foot of water under twenty pounds pressure. It would not be possible to pump all the air and vapor out of the tank so as to obtain a perfect vacuum.

BIG FUTURES FOR TRAINED Auto Experts

Mr. Wm. Arheiger. He has turned out more auto experts than any other man in the west.

Your future—what will it be? Long hours of hard work every day or short hours with good pay? Decide now to become an auto expert. The auto business is easy to learn, pays good money, is here to stay and growing bigger every day. Learn it the practical way at the

A Farm Success Against Odds.

Being a Few Observations on What an Eau Claire County Farmer Has Been Able to Accomplish by Hard Work and Perseverance.

THE experiences of those who are succeeding against heavy odds are always interesting. It matters not whether it be a young man forging to the front in a big concern because he has ambition and ability or the success of a settler who is making good on his chosen piece of land. Perseverance, it is said, always wins and when one learns of someone who is making it go it is interesting to delve into the history of that person.

MR. INGALLS CONFERRING WITH MR. HANGARTNER RELATIVE TO EXPERIMENTS WITH SOY BEANS AS SOIL BUILDERS AND A CASH CROP.

This desire prompted the writer recently to spend an hour in company with Mr. G. R. Ingalls, county agricultural representative, on the Hangartner farm in Eau Claire county. This is not a big farm or even a show farm, but here Mr. Alfred Hangartner, his wife and their four children are making for themselves a good home, are working against great handicaps in building up their farm, and, best of all, they are succeeding. The great lesson of it all is that constant work and interest and perseverance will win.

READY FOR THE DAIRY HERD. NEW BARN OF MR. ALFRED HANGARTNER, EAU CLAIRE COUNTY, COMPLETED LAST FALL.

Twelve years ago Mr. and Mrs. Hangartner came to Eau Claire county, Wisconsin. They had come over from Germany to the land of opportunity and with their savings they bought 120 acres a few miles from the city of Eau Claire. With a few old buildings thereon it was bought for $1,900 and the day the deal was closed Mr. Hangartner began his work to turn it into a productive farm, the kind of a farm he wished.

As he remarked to the writer, "I soon found the land wouldn't grow anything," but he did not throw up his hands in despair. On the contrary, he began studying the methods of soil improvement. Those were the days before county agricultural representatives and before the experiment associations were carrying their experiments to the farmer's door and much of Mr. Hangartner's knowledge had to come first hand and at his own expense. He began considering crop rotations and the growing of legumes to improve the soil, which was light and sandy. It was out of the question to suggest a herd of cattle to supply much-needed fertility. Fertility was expensive and, like the Upper Wisconsin settler of today, Mr. Hangartner, with the help of his wife, had to do the best his means permitted.

The rotations selected gradually improved conditions until one field which grew nothing but weeds when he took it produced 125 baskets of corn one year to the acre. Small grains were tried and a system of rotations were worked out which proved rather successful. This was to follow corn with winter rye, potatoes with oats, oats with winter rye and then sweet clover. This was followed until Mr. Ingalls became county agricultural representative and he immediately took an interest in Mr. Hangartner's operations with the result that he has introduced soy beans into the crop scheme to add humus to the soil, the long-needed element.

Mr. Ingalls, during the past summer, conducted several experiments with Mr. Hangartner, who realized the value of such aid, and particular attention was paid to the use of lime on this soil, it turning out that the limed sections produced much more heavily than unlimed sections. Mr. Ingalls also experimented with potatoes on this farm, but the severe season interfered to a great extent with his success. Soy beans were found to produce well and these will doubtless have a permanent place in the rotation system of this farm. Mr. Hangartner, compelled by necessity to work out for many years his own solution of his problems, was a ready coöperator with the county representative and the results he has accomplished on this farm, non-productive twelve years ago, shows what good methods and study will accomplish.

During the twelve years, aside from raising an estimable family, Mr. Hangartner has improved his soil so that it will begin to support a dairy herd. He has just completed a new modern barn; has six head of cows as a start into dairying and a delightful site picked out for the new home when that becomes a possibility. The barn came first because Mr. Hangartner believes that his cows should be well cared for, as they will provide the money eventually to build the new house. During this time the value of the land has increased, more through the improvements than from any outside cause, and it is certainly worth considerably more than the $1,900 it cost. Some estimate it now worth $6,000, not including the new barn. Mr. Hangartner hasn't placed a valuation on the farm; neither is he particularly anxious to sell.

THE CHILDREN ARE THE BEST CROP OF ALL. ALICE AND ERNA HANGARTNER.

These Are Right Tools

WHAT you do for your seed beds before the crops go in has so much to do with the yield and quality you reap at harvest time that it pays to go slow and **be right in choosing your tillage implements.** That is why farmers everywhere—your neighbors among them—are using International Harvester disk harrows, peg and spring-tooth harrows, cultivators, etc.

At your I H C dealer's store is your opportunity to find out about these. There you will find disk harrows with rigid lasting steel frames, with gangs made to be level at all cutting angles, bearings with four wears, built correctly as to adjustments, seat and levers. You'll find double harrow attachments, forecarriages, transports, everything to just suit you and your fields, even though they be hilly, stony or of any sort of unusual soil.

Take note of what has made the peg and spring-tooth harrows popular with men who want crops as big as they can be made. Pegs that never wear loose. Oil-tempered spring teeth fastened on steel pipe bars to stay. Runner teeth and transports, easy-set levers, riding sulkies, etc.

Be careful in buying tillage tools and be sure to study the International Harvester line. We have catalogues that will interest you.

GET MY PRICES

BEFORE YOU BUY BE sure and get my prices! Before you buy a manure spreader (gasoline engine, cream separator or tractor) of any make, or kind, or price, first get Galloway's 1917 catalog—the biggest, most important book and greatest money-saver for my customers I ever put out! Get my proposition to you and compare it with all others; then be your own judge! We are actual manufacturers and sell direct to you from our factory. We specialize on the lines we offer. We were first to offer manure spreaders, engines, separators direct from the factory at one small profit. We have made the manufacturing and selling of these lines a life business. You can't afford to buy a manure spreader or any of the other Galloway lines until you first get our prices and our proposition. Get my prices before you buy!

UNDENIABLE PROOF!

I saved $29 by ordering a Galloway. I know it is a better spreader than I could have bought here for $125. Geo. A. Kralik, Okla.City, Okla.

I consider it equal to a prominent machine sold for $140. One neighbor who has use both says he would rather have the Galloway. W. Craeraft, Eckley, Colo.

I saved $39. Believe I got a better spreader than was offered me here for $135. A. T. Miller, Orella, Neb.

It is as good a spreader as money can buy. I kept $36.48 in my own pocket. A team that weighs 1,850 lbs. pulls it easily. W. H. Adams, Pound, Wis.

THE WM. GALLOWAY CO., 80 Galloway Sta., **Waterloo, Iowa**

IRON AGE

Farm, Garden and Orchard Tools

Answer the farmers' big questions. How can I grow crops with less expense? How can I save in planting potatoes? How make high priced seed go farthest? The

IRON AGE Potato Planter

solves the labor problem and makes the best use of high priced seed. Means $5 to $50 extra profit per acre. Every seed piece in its place and only one. Saves 1 to 2 bushels seed per acre. Uniform depth; even spacing. We make a full line of potato machinery. Send for booklet today.

DAIRY

Many in Pound-a-Day Class.

To the Editor:—At the end of its fourth year's work the Roberts and River Falls Cow-Testing Association shows production for the last twelve months as follows:

One cow, 500 to 550 pounds butter fat; two cows, 450 to 500 pounds; eight cows, 400 to 450 pounds; thirteen cows, 350 to 400 pounds; forty cows, 300 to 350 pounds; sixty-two cows, 250 to 300 pounds; sixty cows, 200 to 250 pounds; forty-four cows, 150 to 200 pounds; eleven cows 100 to 150 pounds; four cows, fifty to 100 pounds.

A total of 245 cows completed the years work, out of 430 which started. The remainder were sold or butchered. Some of the grades sold as high as $150. The highest producing cow for the year owned by J. L. Chapman, River Falls, has a record of 543.6 pounds of fat. She is a grade Holstein. The second on the list is a registered Jersey, owned by L. W. Ash, of Roberts, produced 494.6 pounds of fat. The average cow of the association produced 6,477 pounds of milk, and 267.15 pounds of fat. The value of the fat produced by the average cow was $96.75, cost of feed, $46.50 and profit $50.25. The return for every dollar spent for feed on the average cow was $2.08. We consider this a fairly good average for this year. Grain was so high that some herds did not get the feed they should have had. The lowest production of any cow was 91.6 pounds of fat and she showed a profit of $7.57 on that. There was one star boarder out of the cows which stayed for the year and she cost her owner $7.69. She was a two year old and may do better next year. It pays to feed grain even though feed is high. Don't look for all the profits in the winter. A cow on grain in the winter is in much better shape for good, hard work in the summer. I believe also that a little grain may be fed to advantage even in the summer months.

One of J. L. Chapman's grade Holsteins showed a profit of $113.39, this being the highest profit of the year. This cow was bought a little over a year ago for $75. She has produced as high as ninety-eight pounds of milk in twenty-four hours. Her feed cost for the year was $84.32. A grade Guernsey owned by J. W. Ruddeman, Roberts, made a total profit of $106.85. H. A. Rundell, of Roberts, also had a total profit on one cow, another grade Guernsey, of $106.15. C. G. Carlson,
Official Tester, River Falls and Roberts Association.

In Marathon County.

To the Editor:—During the month ending March 31st, 285 cows were on test in our association. Eleven produced over forty pounds of butter fat, and thirty-eight over thirty pounds. Five cows were disposed of as unprofitable. William Lenz' four cows produced an average of 738.4 pounds of 4.66 per cent milk, of 34.48 pounds of fat. Two cows passed requirement for the two-year-old junior class. One owned by Chrouser Bros. freshened the 24th of September, produced 723.1 pounds of 4.5 per cent milk, or 32.5 pounds of butter fat, in twenty-eight days. William Schneider's cow, Bossie, started a twenty-eight-day work at one year, eleven months and six days, making 996.5 pounds of 3.2 per cent milk, or 31.8 pounds of butter fat. Garret Hughes' registered Holstein for the month of March, produced 1,566.1 pounds of 3 per cent milk, or 46.7 pounds of fat. George W. Bargabos had two native cows which produced each forty-five pounds of fat, one showing a 5.2 per cent test on 873.6 pounds of milk.

Harry A. Johnson,
Official Tester, Stratford Association, Marathon county, Wis.

Alto Association.

Best cow for month, grade Guernsey owned by Mrs. Theo Kastein, 1239 pounds milk, test 6.0 per cent, 74.3 pounds butter fat. Fifty-eight cows in forty-pound list for March.

F. L. Cuenot Tester.

In Shawano County.

To the Editor:—Shawano County Association No. 1 had 290 cows under test in March. Nine produced over forty pounds of fat. G. R. Rauseau's grade Holstein, producing 50.8 pounds of fat from 1,209 pounds of milk was high cow. Paul Druckrey's herd of four cows, averaged 855 pounds of milk and 30.5 pounds of fat. Members were saved about $4 a ton on purchase of car of feed. C. M. Rydberg, Official Tester.

Mishicot Cow-Testing Association

To the Editor:—The Mishicot Cow-Testing Association has just finished its first year's work, and is reorganized and started on the second year with increased interest. This increased interest is conclusively shown by the fact that already more than 400 cows have been entered for the yearly test, while last year only 300 were in the test for the year.

Mr. Albert Johannes has not only the highest butter fat producing cow, but the one making the most milk during the association year. His six-year-old grade Holstein produced 417.3 pounds of butter fat, and made a profit above feed of $98.47. To another of his grade Holsteins goes the honor of producing the most milk during the year, and second in the production of fat. This cow made 12,105 pounds of milk and 409.9 pounds of fat.

Mr. Chas. Kornely had the third highest butter fat producing cow, and also that in which we are most interested—the herd and the cow that made the most profit. The cow that made the largest profit above feed was a grade Holstein, making $133.61. With an average profit above feed of $88.99 his herd was the highest profit-making herd in the association.

Mr. Walter Zander had the herd making the highest average production of butter fat for the year. Each cow in his herd made an average of 330.1 pounds of fat and a profit above feed of $70.47.

Following are the ten herds having the highest average fat production:

Owner	Milk	Fat	Feed cost	Profit
Walter Zander..	7965	330.1	$67.71	$70.47
Albert Johannes	8704	311.19	63.48	61.97
Chas. Kornely..	8809	300.9	55.38	88.99
Oscar Sanz	6443	296.1	60.31	63.65
Geo. Wuellner..	7759	295.3	37.70	83.13
Wm H Spencer	6852	292.2	51.12	73.49
Wm. Bertoloet..	5909	290.3	53.45	69.32
Peter Fliegel...	7115	290.1	63.06	57.46
Robert Hessel ..	7442	287.2	54.84	60.40
H Zermuehler .	8017	285.8	55.37	61.19

These records certainly show that we have some high producing cows in this section. They show, too, that the cows producing large quantities of fat are the biggest money-makers even though they do eat more than some of the other cows.

Nine of these cows have qualified for entry in the pounds a day register for Wisconsin Cow-Testing Association, a register that is being established for cows making high-production records in cow-testing associations. The tester will continue his work in the association for the new year.

E. H. Meineke,
Official Tester, Manitowoc county, Wis.

Wrightstown, Greenleaf and Brillion Association.

To the Editor:—Our association records prove that more Wisconsin dairymen are learning the value of liberal feeding to good cows. Over 20 per cent of those tested in the month ending April 10th, or a total of seventy-three cows produced more than forty pounds of fat, and our high herd averaged 17.8 pounds [illegible]

High Feed Costs Smashed!

Down they go—to *smash!* In scads of cases cut down a HALF! Thousands of farmers are selling their No. 1 hay, milling off-grades. They're making the grandest alfalfa chop; fattening hogs, cattle, sheep, poultry and *purses!* making it cheaply, easily, with our famous patented Recutter Attachment (6 sizes for field use).

Handles leaves, stems and all! No wasted no injuring color of hay. Makes dandy combination feeds from clover, rice, straw, cornstalks, bean straw, pea vines, oats and rye. Biggest guaranteed capacity! 1200 to 2700 lbs. per hour. 600 to 900 lbs. of meal per hour with Junior Mill (run with 6 to 8 h. p. engine). Cracks peas, corn and beans.

SMALLEY SILO FILLER

SEVEN SIZES

Tremendously simplifies silo filling. Grip Hook Force Feed table automatically feeds cutter—saves wage and board of from one to three men. Makes richest feed, increases silo tonnage.

Blower built independent of cutter. Let your fan spin fast or slow, the speed of knife shaft is unchanged. No belt to slip, wear out, and waste time, money, power. Patented low-speed one pulley chain drive is faster, cleaner. Saves 1-4 to 1-4 power costs! Powerfully built. A fourth heavier with wonderful record for long service. Handsome new catalog FREE. Write for it to Dept 55

SMALLEY MFG. COMPANY
Manitowoc, Wis.

B. V. T. SILO

Notice the patented block. Excludes air and moisture. Permanent construction. Block indestructible. Why not have a Silo that will last forever? Write for free Silo book.

BRAZIL HOLLOW BRICK & TILE CO.
BRAZIL, INDIANA

I MET HIM ON THIS VERY SHIP!

It was within an hour of sailing time. I was on my way home from Europe five years ago. The Mauretania lay beside her Liverpool wharf. Everybody was hurrying to get on, as we were to sail at five o'clock. Suddenly, without warning—without a propeller turning—she commenced to pull away from her moorings. The gang planks creaked—broke loose—and there was quite a commotion as the mighty Mauretania tore loose from her moorings and floated out into the water. In the excitement I met a man who was leaning over the rail who looked at me and we laughed together. Then we just naturally got acquainted like people do when they are traveling. He was J. J. Berrigan of Orange, New Jersey, the famous cream separator expert and inventor. I had never seen him before but I had heard of him. I told him I was from Waterloo, Iowa, and he said, "You are Galloway." I soon found out he was the great cream separator expert and a man I was glad to meet. Naturally

"Read this little story. It was my turning point as a manufacturer of cream separators."—Wm. Galloway.

WE BECAME WELL ACQUAINTED

He told me what he had done in perfecting cream separator patents and improvements. I told him he was just the man I was glad to get acquainted with. After the Mauretania had been lashed to her wharf again, the excitement was over, and we pulled out of Liverpool several hours late—Berrigan and I began to talk cream separator, and every day after that we spent several hours together visiting. I told Mr. Berrigan that we were perfecting what I thought was the best cream separator ever produced, and I also told him if he would come to Waterloo and put on the finishing touches, go over the separator, test it, criticize it, find fault with it wherever he could, and suggest any possible improvements, I would pay him well for his time. In a few days after we landed in New York he did come to Waterloo. He said our separator was one of the finest designs he had ever seen, and with the few recommendations which he made, he pronounced it O. K.—good as the best—and better than many of the separators on the market today. Our engineers, designers and separator builders had produced a machine with graceful lines, simplicity of construction, combined all the good features and left out all the faults. Mr. Berrigan commended us on the work and immediately put his stamp of approval upon this machine. That's why I say

WE PERFECTED THIS SEPARATOR

before we offered it on the market. We put out in the hands of farmers and dairymen enough of these separators to know that they would stand up under any test, whether operated and used in the kitchen, the milk house, the creamery or elsewhere, used two or more times per day, every day, week after week, month after month. **I just want you to try it.** If you like it, buy it. If you don't, send it back. **We pay freight both ways.** If the New Galloway Sanitary Separator is as good as I say it is you can't afford to buy any other kind. If it is not as good as I say it is, I could not afford to make this **ninety day trial** offer and I could not afford to guarantee it for **ten years.**

Get My New Low Prices

AND READ MY 1917 BOOK ABOUT CREAM SEPARATORS

It tells of how we took four years to design and perfect this separator, to build into it every good cream separator feature and retain its beautiful proportions. How we did not build it down to a price, but built it up to a high standard in our own factories right here in Waterloo. It tells how we build Galloway Sanitary Separators from the ground up. How they are designed and many other separator secrets and facts. A meaty, exact, concise, truthful book about cream separators, gasoline engines, manure spreaders, tractors and other implements we manufacture. Why, by selling direct, I can make a machine as good or better than any high priced separator sold through other systems. These are a few of the reasons why I want you to get this book. It tells the whole story. It tells the truth. It tells the facts. Ask for it today. A postal gets it. Don't delay. A reading will save you dollars in buying.

Indisputable Proof!

Have operated several different kinds of separators. Galloway Sanitary skims as close and runs lighter than any. J. E. Ricketts, Paddensburg, Mo.

We know it skims close. It paid for itself. Wm. S. Brower, Farnum, Idaho. It is easier running and more easily cleaned than others. We made a saving of $23. I wouldn't exchange it for any high priced separator. E. F. Louthan, Carthage, Mo. Your No. 9 separates perfectly at rate of 800 lbs. per hour. (Only guaranteed for 750 lbs.) S. S. Brockway, Greenville, Pa.

Try a Galloway Sanitary Cream Separator in Your Dairy for Ninety Days.

Stand it side by side with cheaper machines and you will see the difference in material and workmanship, design and skimming qualities. Stand it beside the highest priced machines, test them together for months! Higher priced machines will not run any easier or skim any closer and cannot be more perfectly sanitary or better built. We want you to be the judge—we will take your decision as final. Separators shipped from Waterloo, Council Bluffs, Kansas City, St. Paul, or Chicago, whichever is nearest to you.

Note these few strong, simple, sanitary parts. Easy to wash clean—no rough edges—no sharp corners. Bowl catches any foreign matter in the milk. Only two shafts in the whole gearing—both of high-carbon steel, in long, perfectly fitted bearings. All gear shaft and both bowl spindle bearings supported by one casting—the gear case. All the working parts run spray of oil. Simple, effective driving clutch on crank shaft.

4 Good Sizes From 375 to 950 lbs. Capacity per Hr.

F. A. Gaiser,
Official Tester, Wrightstown, Greenleaf, Brillion Association.

Five Hundred Cows to Texas.

To the Editor:—Notwithstanding the scarcity of good roughage and the high price of feeds, the cows in the Winnebago Cow-Testing Association are returning fair profits. The best cow for March was a grade Holstein owned by Ed G. Race, of Omro. Mr. Race has a herd of 106 Holsteins, consisting of pure breds and grades. He has a barn 50x120, and as fine a ventilating system as anyone I know of. On March 26th, Mr. E. W. Dale, of Beatrice, and O. E. Leibers each from Texas, and Mr. Frank M. Clark, of Healy, Texas, bought twelve head of high-grade milk cows from Mr. Race. These were shipped to Appleton, where they were to join a train load of grades and pure breds, numbering 500 in all which started for Texas, April 2d. Mr. Leibers stated that nothing but pure-bred bulls were allowed to go in this bunch. Mr. Race also sold his senior herd bull for $1,200 to Kirkpatrick Brothers, at Reedsburg, Wis. The following is the forty-five pound list for the month ending March 31st:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat

Feed Cotton Seed Meal

No Feed supplies protein at such low cost. No feed gives such rich manure.

Manure Worth $38 Per Ton

The value of manure from animals fed cotton seed meal almost pays for the feed. For cotton seed meal is not only a rich feed, but one of our richest plant foods. At present prices it is worth, as a fertilizer, $48. Feed it and 80% of its plant food is retained in the manure. Thus, the manure is worth $38 per ton. At average fertilizer prices, the manure is worth $25 per ton. The manure from corn is worth $6 and the manure from oats but $7.

6c Per Lb. for Protein—or 24c

In no way can you get protein so cheap. In Indiana it was found that "a ton of cotton seed meal saved $55.40 worth of corn and clover hay." At present prices for corn, each ton saves $88. The figures below show just the number of pounds of protein to a ton in different feeds, and the cost of protein in each at present prices. Our valuable book on feeding cotton seed meal sent free. Address nearest office. (24)

How to Erect A Wood Tire Silo

Bolt tire to concrete base. Set the 2 x 4 spacers on lower tire and toe-nail. Place second tire on spacers and toe-nail. Repeat until framework is done. Nail on outer covering of spruce—then inner lining of California redwood.

You then have a **storm-proof, frost-proof, mould-proof** silo without hoops or guy wires—one that will not swell, shrink or decay—a different, *patented* silo that gives you the best possible service and at a reasonable cost. Write for our FREE silo folder and learn more about its construction and advantages.

Should Use in its Construction

DRICO EXPANSION DOORS
DRICO INTERLOCKING HOOPS

Drico Expansion Doors are mentioned by the Hemlock and Hardwood Manufacturers' Association of Wisconsin in the Korn Keep Silo specifications for economy and convenience. No patented silo door equals the Drico. They make a silo air-tight and provide for possible expansion caused by heating of the ensilage during fermentation. The crank arm, which easily operates the door, forms a combination lock and ladder.

Drico Interlocking Hoops are made of wood, 4-ply thick, steamed and rolled to the correct curvature. In using these hoops the silo will be perfectly round, permitting an even settling of the ensilage. Hoops never need tightening, nothing can get out of order.

Both Drico Doors and Drico Hoops can be gotten from the lumber yards owned by the members of the Hemlock and Hardwood Manufacturers Ass'n of Wisconsin and from lumber dealers in general. If your local lumber yard cannot supply you, write direct to us **For Free Booklet** and prices.

Agents Wanted Everywhere — DRICO SILO COMPANY, 9th and Murphy Sts., Des Moines, Iowa.

EAGLE ENSILAGE CUTTER — The Anti-Clog Machine

Eagle Cutters are known for their great strength and power, yet they are the very acme of simplicity and are so constructed that it is *impossible to feed too fast.* You start, stop and reverse the Eagle Cutter instantly—all with the same lever. Positively safe for any one to use. *Safety Cylinder Head* does away with the possibility of damage to knives. *Improved Rollers*—upper one grooved, lower one spiked, give

50% GREATER FEEDING POWER

Positive speed relation between cutting head and fan makes the Eagle absolutely *anti-clogging.* Idler pulley and blower pulley done away with—direct drive on cylinder pulley only—*no slipping of belts.* These and other special features make it the safest, most powerful, most economical ensilage cutter you can buy. Send today for free booklet showing all sizes of Eagle Ensilage, Feed and Fodder Cutters.

Beautifying Farm Home Grounds.

Just a Little Added Expense Will Add to the Value of the Home Property.—By Franz A. Aust, Wisconsin Station.

MAKING a drawing on paper of the best way to plant the home grounds often "turns hindsight into foresight." When possible draw a plan to a definite scale; that is, have perhaps eight or ten feet on the ground equal one inch on the paper. Show the location of buildings, walks, drives, trees, garden, play area, laundry yard, and the like.

The house is the central feature of the home-grounds picture. Give it the

THIS HOME WOULD LOOK MUCH MORE BEAUTIFUL WITH A PROPER SETTING.

greatest prominence. Never dwarf its size by placing larger buildings nearer the road. Never plant tall-growing trees close to a small house.

The lawn is the foreground of the home picture. It should be large enough to give privacy and expanse. Keep it open, free from flower beds, statuary, monstrosities or improperly located plants which deface the picture. Trees furnish the frame and background of the home picture. Plant them on the border of the lawn to enframe the views to and from the house, to screen unsightly objects and for shade in summer and protection in winter. Plant trees along the roadway, so they will give shade for the passerby. Avoid planting trees too closely. Large trees should seldom be planted closer than forty feet apart. Do not plant box elder, soft maple, or poplar, unless they are alternated with permanent, long-lived trees. Remove the fast-growing trees as soon as they interfere with the permanent ones. Avoid planting lawn trees in straight rows. As a rule, they should stand either as single specimens, or in irregular groups. The weeping mulberry, camperdown elm, weeping beech, catalpa bungeii, and the like, are freaks and out of place on the lawn.

Small trees, such as the flowering crabapples, thornapples, plums, and mountain ash, when used singly, are valuable for enframing views near a small house where large trees would dwarf the house. When used in groups of two or three, and supplemented with shrubs they are valuable for

EVERGREENS ARE NOT ARRANGED TO THE BEST ADVANTAGE.

screening unsightly objects, for forming a transition between larger trees and shrubs, and for breaking monotony in the shrub border.

Evergreens are usually sold by their height and spread. Other trees, up to ten feet, are usually sold by their height, and larger trees by the diameter of the trunk near the base. Ordinarily it pays to buy a tree of at

WHEN THESE TREES GROW UP THE BUILDINGS WILL BE HIDDEN.

least one and one-half inches in diameter. Frequently much larger trees can be planted at comparatively low cost.

Shrubs are the harmonizing elements of the home-grounds picture. Group them at the corners and angles of the house to make it appear a part of the grounds. Plant masses of shrubs along the boundaries to give interest and year-around beauty. Use them to screen unsightly objects and to make walks and drives less prominent. Plant the more refined-growing varieties about the house and the coarser ones, such as sumacs, elders and blackhaw, at the borders, where they will be seen at a greater distance. Plant the high-growing shrubs at the corners of the house and in the wider portions of the border beds for accentuation. Plant the low-growing shrubs in front of the higher ones, so there will be a continuous mass of foliage.

Before buying or planting, be sure you know the ultimate height to which the plants will grow. When planting close to walks and drives, use compact-growing species to avoid obstructing traffic. Do not plant shrubs in a straight line, but place the plants irregularly, in order to avoid a lined-up appearance. The side of the planting beds next to the lawn should present a pleasingly curved outline.

Shrubs are sold according to their height. One and a half to two feet for low shrubs, two to three for medium, and three to four feet for the higher-growing species are good sizes to buy. They should have good, bushy tops and equally bushy and well-balanced root systems. Mere whips are never acceptable. When purchasing in quantity, buy direct from a reliable nursery; stock purchased through agents naturally comes at higher prices. When bought in lots of ten or more, the cost of the common shrubs should generally not exceed 20 to 25 cents each. This does not always include packing and freight.

Unpack shrubs immediately upon their arrival, and if you cannot plant at once, place them in a trench and cover the roots with earth to prevent drying. When planting, do not leave the shrubs lying about the lawn, as great care should be taken to prevent injury to the roots by exposure. Spade up the entire bed to a depth of eighteen inches and work in some well-rotted manure. Dig a hole large enough to contain all the roots without crowding, and prune back the top of tree or shrub to balance the loss of roots made in digging. Water the plants well during the dry season by thoroughly saturating the ground once every week. Cultivate the beds by hoeing and keep down all weeds.

Flowers give life, color and variety to the home-grounds picture. Hardy perennial flowers, which come up from the root each spring, require much less

THE SETTLER CAN WELL AFFORD TO SPEND A LITTLE ON HOME SURROUNDINGS.

care than annuals or bedding plants, and many are just as satisfactory for cutting. Plant flowers along the garden walk, wall, fence, or at the edge of shrub plantings. Use those which can endure shade, together with ferns at the north side of the house. Na-

It Beats Out the Grain

THE big cylinder throws straw, chaff and grain against the "Man Behind the Gun." 90 per cent of the grain is forced out here. The straw goes over; then shakers *beat out* remaining grain. The farmer saves more of his grain—the thresherman makes more profits. Hire or buy a

Red River Special

and save your high-priced grain. "The fastest thresher and the best grain saver we have ever seen," says W. T. Wilson and three other farmers of Wanesville, Ohio.

If you are a thresherman, write and learn why Red River Special owners get the big money-making runs. Red River Special outfits are built to thresh *fast* and *well*. Speed up your run—get in more *good* jobs—please more customers—make a bigger income. Save the farmer his thresh bill by saving his grain and time.

tive wild flowers are usually best for such locations. For the beginner, it is better to plant perennial flowers in masses, using only two or three kinds, being careful that the colors will harmonize. Plant the taller perennials at the back and the lower ones in front.

To be beautiful, the home-grounds picture must be simple. Each object must be harmonious with the general plan, for "the beauty of the whole is greater than the beauty of any part." There must be a logical and orderly arrangement of the useful features and the planting materials must be in harmony with other features of the landscape. Do not neglect the plants we call common. The common—elder, sumac, blackhaw, thornapple and crabapple—are more beautiful in the average home grounds than many of the foreign shrubs. Plant permanent, long-lived trees and shrubs, which will be a credit to your efforts in years to come.

A recommended list of trees for street, lawn or woodlot. Many trees have been omitted from this list for the following reasons: (1) Because they are not universally reliable; (2) because their many insect enemies or some particular characteristic make them undesirable; (3) because they are useful solely for added variety. Those wishing more complete lists may write directly to the department of horticulture, University of Wisconsin, Madison, Wis.

A. Evergreens.

1. For background, screens, windbreak or woodlot.
   Long-lived trees—Norway or red pine, white pine, white spruce, white cedar, or arbor vitae.
2. For lawns.
   Large evergreens—See A-1 above.
   Small evergreens—Cedar in variety, Siberian arbor vitae, dwarf arbor vitae.
   Dwarf evergreens—Four to six feet; American yew, Japanese yew, Dwarf Mugho pine, Savin juniper, Waukegan Juniper.

B. Deciduous Trees.

1. For background, screens, windbreak or woodlot.
   Long-lived trees — Hard maple, elms, white oak, red oak, basswood.
   Short-lived trees (for quick effect only)—Carolina poplar, soft maples, willows, Bolle's poplar.
2. For street.
   Elms, Norway maple, pin oak, green ash, basswood.
3. For roadside planting.
   The best native trees of the locality.
4. For lawn.
   Large trees—(See B-1 and 2 above). Red maple, honey locust, burr oak, scarlet oak, hackberry.
   Small trees—Wild cherry, wild crabapple in variety, thornapple, mountain ash, alternate-leaved dogwood, moosewood, birch, shadbush or Juneberry, Tatarian maple.

Permanent and reliable shrubs for foundation and border planting. The list is not complete, but includes the shrubs most frequently used. The height at maturity depends upon soil and climate conditions, but when planted together the relative heights given will be maintained.

1. High shrubs—Ultimate height ten to fifteen feet. Plant five to six feet apart. Buy three to four-foot stock. Tall Siberian pea for borders. Red-twigged dogwood, bush honeysuckle, mock orange, ninebark, smooth sumac, lilac, nanny berry, wayfaring tree.
2. Medium-sized shrubs — Ultimate height six to eight feet. Plant four to five feet apart. Buy two to three-foot stock. Five-leaved aralia, buttonbush, gray dogwood, rough deutzia, winged burning bush, white bush honeysuckle, Morrow's honeysuckle, Japanese rose, Ramanas rose, American cut-leaved elder, silverberry, early-flowering spiraea, Van Houtte's spiraea, snowberry, arrowwood, downy arrowwood.
3. Low-growing shrubs.—Ultimate height, three to five feet. Plant two and one-half to three feet apart. Japanese barberry, small-leaved cotoneaster, summer snowball, hills of snow, fragrant sumac, Alpine currant, prickly rose, prairie rose, dwarf red spiraea, dwarf white spiraea, maple-leaved viburnum, dwarf evergreens.

Vines.

1. For brick walls—Engelmann's ivy.
2. For trellis or lattice—Japanese clematis, clematis virginiana, wild grape, Virginia creeper.

Perennial and near perennial flowers.

1. For poor soil.—Native columbine, wild aster, Scotch pink, blanket flower.
2. For border along fence, wall, or shrub plantings. (Arranged according to height.)
   A. Tall, two and one-half to six feet. Plant one and one-half to two feet apart. Swamp rose, false camomile, New England aster, New York aster, tiger lily, herbaceous or Chinese peony, golden-spurred columbine, canterbury bells, Japanese iris, hardy phlox, baby's breath, yellow-day lily, Siberian iris, Oriental poppy, hardy chrysanthemum, German iris, old-fashioned early peony, balloon flower, cone flower.
   B. Medium-sized, one to two and one-half feet. Plant one foot apart. Double sneezewort, peach-leaf campanula, coreopsis, bleeding heart, blanket flower, blue bonnet, giant daisy, dwarf balloonflower, showy sedum, globe flower, Rocky Mountain columbine, meadow sweet.
   C. Low—less than one foot high. Plant six to eight inches apart. Wild Sweet William, Carpathian hare bell, white Carpathian hare bell, Scotch pink, lily of the valley, Forget-me-not.
   D. Native wild flowers are usually better adapted to local climatic conditions than the garden flowers.

HOMELIKE BUT NOT ARTISTIC ACCORDING TO MODERN IDEAS.

425 EARLY PLANTS $1.00 POSTPAID

A complete garden for a one dollar bill. Texas winter field grown vegetable plants. Save you four weeks of time. Means an early garden. For $1 you receive these plants: 100 beets, 25 cabbage, 100 carrots, 15 cauliflower, 25 celery, 100 onions, 50 head lettuce, 10 parsley. Postpaid. Thrifty plants. Send your order today. Complete catalog free.

RUSH PARK SEED CO.

Established 19 years and reaches 76,200 readers. Send 25c for one year's subscription or $1.00 for five years. Department F. Farm and Real Estate Journal, Traer, Iowa.

SEED CORN

Golden Glow (Wis. No. 12) 98 ½ germinated, 99 9-10½ pure. Absolutely guaranteed. A limited amount for sale.
RILEY MARTINY & SON, Baraboo, Wis.

At wholesale—Send $1 and we will send you 100 Progressive Everbearing strawberry plants (postage prepaid). Trees, shrubs. Free catalog, something good. Welsh Nursery, Shenandoah, Ia.

When writing to advertisers kindly mention The Wisconsin Farmer.

Land Clearing Costs Reduced

The recent land clearing tests conducted by the University of Wisconsin revolutionized methods and established much lower costs. The leading kinds of stump pullers---hand and power---were represented. The dynamite used was

DU PONT

Red Cross Farm Powder

These tests proved the following important facts:

1st---The cheaper Red Cross Farm Powders will in most soils blast out stumps as well as the more expensive 30% and 40% grades. 2nd---The combined use of Red Cross Farm Powder and a stump puller is often the cheapest and best way to clear land. 3rd---Properly placed charges fired with a blasting machine greatly reduce the amount, strength and cost of the dynamite required. Average stump covered land can now be cleared at less cost per acre than before the war.

GET MY PRICES

BEFORE YOU BUY BE sure and get my prices! Before buying a gasoline engine (manure spreader, cream separator or tractor) of any make, or kind, or price, please ask for and read Galloway's 1917 catalog—the biggest, most important book and greatest money-saver for my customers I ever put out! Get my proposition to you and compare it with all others; then be your own judge! We are actual manufacturers and sell direct to you from our factory. We specialize on the lines we offer. We were first to offer engines, separators, spreaders direct from the factory at one small profit. We have made the manufacturing and selling of these lines a life business. You can't afford to buy a gasoline engine or any of the other Galloway lines until you first get our prices and our proposition. Get my price before you buy! Cash or time.

HERE'S THE REAL PROOF!

My 6 h.p. Galloway was 5 yrs. old this fall. Works perfectly—good for 15 yrs. yet. HAROLD W. BARNES, DELPHI, IND.

I can't give it praise enough. I had a 6 h. p. Galloway engine belted to my 16 in. corn mill and it does the work, where an 8 h.p. of another make did not. M. P. SHOEMAKE, DEFEATED, TENN.

it has not cost me one cent for repairs. Am now buying a 2 1-4 h. p. engine and washing machine for the home. Consider the Galloway simplest engine made. ADOLPH DRINOVSKY, TRAER, IA.

I found the 16 h. p. Galloway simplest, most powerful, best governed engine I ever saw and $225 cheaper. HENRY WENHAM, MILTON, WIS.

LANDS AND HOMES

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production

The demand for farm labor in Canada is so great that as an inducement to secure at once the necessary help required, Canada will **give one hundred and sixty acres of land free as a homestead** and allow the farm laborer, who files on land, to apply the time he is working for other farmers as residence duties the same as if he had lived on the land he had applied for. This offer made onl yto men working on Canadian farms for at least 6 months during 1917, thus reducing the necessity of actual residence to 2 years instead of 3 years, as under usual conditions. This appeal for farm help is no way connected with enlistment for military service, but solely to secure farm laborers to increase agricultural output. A wonderful opportunity to earn good wages while securing a farm. Canadian Government will pay all far over one-cent per mile from St. Paul and Duluth to Canadian destination. Information as to low railway rates, etc., may be had on application to

GEORGE A. HALL
Canadian Government Agent
123 Second St. Milwaukee, Wis.

OPPORTUNITY LAND

Others are making good in Montana and North Dakota and so can you. Montana leads the world in development of farm lands—in quality of grain produced. There is still opportunity to homestead or purchase deeded land at very low prices in this great new golden Montana country. Send for Montana Bulletin today, fully illustrated and with complete information. Up in North Dakota prosperity reigns supreme. Diversified farming is proving a huge success in this bread basket of the world. And your share of this land awaits you for a small investment.

Let Me Mail You FREE Bulletins

containing full information about Montana and North Dakota opportunities. I will gladly help you make a choice and advise you honestly about best values on the line of the Great Northern Railway. Write for bulletins and advice today. Address

Des Moines, Iowa

ADVERTISING LOWERS SELLING COST.

Plenty of Facts Available to Substantiate This Claim.

The rising cost of living is the great universal hardship of the present day. So great and so many have these rises been that few people stop to realize that there have been any exceptions to the general rule. But the fact is that there have been numerous exceptions and all of these exceptions belong to the same great class—that of widely advertised goods.

The old idea that the cost of advertising raises prices dies hard. But the business man knows better. He knows that selling goods is costly business, no matter what the goods or what the selling methods. And he knows that anything which creates 'emand on a large scale, and thus makes selling easier, is bound to reduce selling costs and thus helps to reduce prices.

But evidence is better than argument; facts are better than theories. The Association of National Advertisers, an organization of 260 of the leading advertisers of the country, has been at great pains to collect the facts. It has secured an immense body of data from its members which proves that advertising does reduce selling costs and thus tends to reduce the selling price of advertised goods. "The proof of the pudding" is the argument that settles everything.

To present all the evidence, instance by instance, is impossible within these limits. A few representative cases will suffice.

The makers of a famous photographic camera, when they began advertising twentyeight years ago, made one camera which took a 2½-inch picture and which sold at $25. Today they make a far better camera which sells for $10. Another, which took a 4x5 picture, sold for $60. Today they sell a far better one for $20, and so on through the line.

A prominent hat manufacturer has, by means of advertising, reduced his selling cost 7 cents per hat. Result—the buyer gets a hat of better quality at no increase in price; this despite increased cost of raw material and workmanship.

When the manufacturer of a famous breakfast food specialty began advertising, his goods sold at 15 cents a package. Today the package is 50 per cent larger and the price has been reduced to 10 cents. Again advertising did it, the same causes producing the same results.

The producer of another well-known food specialty is selling his goods at 25 per cent less to the wholesale grocery trade than four years ago.

Twenty years ago a nationally advertised shaving stick was sold in a cheap metal leatherette-covered box. Today a stick containing 20 per cent more soap is sold in a handsome nickel box at the same price.

Then take the most conspicuous example of them all—the automobile business; and compare the $5,000 or $10,000 cars of ten years ago with the equally good cars of today, selling for a fraction of the money.

And so on through a long list. In every case, the manufacturer either has been able to lower the price or improve the quality at no increase in price.

How has he done it? By means of advertising, which has created demand on a larger scale and thus permitted production and distribution on a large scale. Result—improved manufacturing efficiency and reduced selling costs. And all of this in the face of a steady increase in the cost of labor and raw materials which, with advertising eliminated, might in many cases have fairly doubled the price of the goods.

"A triumph of economical marketing" is the only possible verdict for advertising in the face of these facts.

Ailing Animals.

Lack of Milk or Mammary Secretion.

Will you please tell me what to do for a sow to make milk? I have a sow with eight pigs and she doesn't give enough milk. They seem to be starving and she is fat and healthy. I feed her swill made of ground oats and shorts. They are her first pigs.

Some sows are naturally not good "sucklers." A supply of good food and plenty of exercise are to be advised. If you can obtain some good clean alfalfa hay take some of it that is well leaved out and pour boiling water over it and let it steep, then make a slop with the tea thus obtained. This may be of some benefit to her.

Crampy.

We have some horses that are crampy, or I suppose that is what is the matter with them. When we are working them in the field and stop them to let them rest they will raise their feet off the ground and jerk for a few seconds at a time. Can you tell me what causes this, and if there is any remedy?

You do not say whether these horses have been affected this way before or not. It may be simply crampiness from change of work, such as going into fields. This will probably wear off as the animals become more used to the work.

Worms in Horses.

Would like to know how to give turpentine and other ingredients to horses infected with round worms. Do you give it to them only once? Do they die after that? This recipe was given in the February 8th issue.

There was a misprint some time ago in regard to treatment of worms in horses. It should have read: Give twice daily for three days a drench composed of oil of turpentine or creolin, one ounce in linseed oil three or four ounces, to be followed on the third day by a physic of Barbadoes aloes, one ounce. This is for round worms. Feed lightly during treatment and rest for twenty-four hours after giving aloes.

Law Questions.

Widow Inherits Whole Estate.

A Subscriber, Middleton, Wis.—If a man in Wisconsin dies without making a will, leaving a wife and stepchildren, but no children of his own or descendants, to whom does his farm and personal property belong?

Answer.—His entire estate goes, by law, to his widow.

Mortgage Required No Stamp.

A Wisconsin Subscriber.—A real estate mortgage was executed and delivered on the fourth day of August, 1916. Did the federal law require United States revenue stamps to be placed on it, and if so, and stamps were not affixed, what is the penalty?

Answer.—No U. S. revenue stamps were required to be placed on said mortgage, as it was given to secure the payment of a debt, and such instrument did not require stamps.

Dog Law.

A Subscriber, Le Roy, Minn.—(1) If a farmer's dog runs out in the public road and bites the heels of the horses of a passing team, or scares the horses, has the driver of the team a lawful right to kill the dog? (2) If a farmer's dog chases cattle in another man's field, has the owner of the cattle a right to shoot the dog?

Answer.—(1) He has not, but if the dog has such a habit, he can make complaint before a justice of the peace and prove it, and the justice will order the constable to kill the dog and bury it. (2) The owner of the cattle has a right to kill the dog.

Claim Not Collectable—Mortgage.

A Subscriber, Madison, S. D.—(1) A moved on a farm as a tenant in the spring of 1915, when B, the preceding tenant, moved off. B left several things on the place, including an old steam engine with upright boiler, which he admits was no good for anything, except as old iron. After it had been on the place more than a year, A's boy took from it a few small pieces of brass and other little things for playthings, and when B moved the engine he charged A $15 for the things the boy took. Can B collect the same by law? (2) A certain farm lease, with a mortgage clause in fine printing, was made in July, 1914, covering all crops raised on the rented premises by the tenant, but it was not put on record. Is the mortgage valid?

Answer.—(1) He cannot. (2) The mortgage is valid as between the landowner and the tenant, but valid as to other persons who had no notice of the mortgage.

Settling an Estate.

A Subscriber, North Milwaukee, Wis.—I have several brothers and sisters, all of whom live in the city. I left the city years ago to become a farmer. Our parents died six years ago, leaving real estate in Wisconsin—an old homestead which is to be sold and the proceeds divided among us children, but there is delay in selling and settling up the estate. One of my brothers is administrator of the estate and about two months ago I wrote to him asking for my share, as I was growing old, and wanted to buy a place of my own, but I received no answer. What steps can I take to get my share of my parents' estate?

Answer.—You should employ a reliable lawyer in the county where the homestead is located, to compel the administrator to settle the estate of your parents, and have partition made between you and the other heirs. You can do nothing in the matter by law without the assistance of a lawyer.

Insurance—Debts—Concealed Weapons.

A Subscriber, Langford, S. D.—(1) I had an insurance policy on which the premiums were all paid. I suffered loss on property insured, but my policy has been lost. How can I collect the insurance? (2) A man who is hard up, but has plenty of property, owes me money. How can I collect it? (3) When the publisher of a paper or magazine continues to send it to a subscriber after his subscription has expired, can the publisher collect pay for the same? (4) Have I a right to carry a concealed loaded revolver in the United States?

Answer.—(1) If the company refuses to pay you can bring suit against it and prove the contents of the policy and that the instrument was lost and recover your loss. Employ a good local lawyer to attend to it. (2) Sue the man and get judgment for the amount he owes you and have execution issued against his property. (3) If the subscriber continues to receive the paper or magazine by mail without objection the publisher can compel him to pay for the same. (4) Every state has its own laws on this subject. If you carry a concealed loaded revolver in South Dakota you are liable to be put in jail not exceeding one year or fined not more than $500 or both.

Kirstin Stump Puller

This KIRSTIN Horse Power Puller, used by the KIRSTIN METHOD, is the cheapest and fastest way known for clearing land ready for the plow. We will guarantee you a saving of 10% to 50% over any other method. Over 40,000 in use. All steel construction combines great strength and light weight. Clears two acres from one anchor. Easily moved. Can be used with single, double, and triple power as needed. Will pull any size stump. Guaranteed fifteen years, flaw or no flaw.

Automatic take-up for making quick hitches. Foot for foot of cable, KIRSTIN covers more ground than any other machine. Easy on horses and man. Ten-day trial in your stump field.

Now—today—quick—write for our special Profit Sharing Plan to early buyers and our big Free Book—"*The Gold in Your Stump Land.*"

A. J. KIRSTIN COMPANY
6552 Ludington St. Escanaba, Mich.
Largest makers in the world of Stump Pullers—both One Man and Horse Power.

More Sunshine Less Feed

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Hatching Eggs and Chick Care.

To the Editor:—Run the incubator in the cellar, if possible. Turn eggs morning and evening. When through turning, gently roll with palms of hands for two minutes. See that all little ends of eggs are down. Do not turn the eggs after the end of the eighteenth day. Do not open the machine while hatching. This will let moisture escape.

First chicks out of shells are profit makers. In the brooder house maintain a floor temperautre of 65 to 70 degrees, and use a good hover. Baby chicks should not be fed until the morning of the third day, and then very sparingly. The floor should be covered with fine-cut, clean straw or chaff to a depth of two inches. To every seventy-five chicks scatter a half teaspoonful of grit and a small half handful of a good chick feed. They should be fed four times a day, and never more at a time than they will eat readily. If any grain is left, feed less next time. Gradually add more straw to promote exercise. At ten days keep a box of grit and charcoal before them at all times. On the sixth day feed a mash composed of two parts bran and one part rolled oats. To this add one-eighth finely sifted beef scrap and feed it dry in hoppers. Increase the amount of grains to meet the requirement of rapid growth. Now gradually feed them some green foods, such as sprouted oats, cabbage or alfalfa leaves, moistened a bit. Keep clean water before them always and do not let the vessels get foul.

As soon as the weather permits, the young chicks should be put out on range. This gives them a chance to develop rapidly. We have had good success raising chicks in houses 5x5, 4½ feet high in front and 3½ in back, with hover to nurse them.

For growing stock on range, keep before them in hoppers a mash composed of ten pounds bran, ten pounds shorts, ten pounds ground corn, five pounds meat scraps and a small handful of charcoal and salt. This should prepare them for fall laying. We have found that pullets that have laid heavily in their pullet year invariably have pale shanks and feet. This is due to the pullet's body not being able to furnish pigment necessary for the yolk of the egg, and consequently it must come from feet and shanks.

Eggs do not hatch well, chicks appear weak and puny and many die before ten days old because of immature stock and inbreeding. A common cause of lack of vitality is close confinement without sufficient exercise and fresh air. Beware of feeding too much corn. This is a one-sided ration. A variety of grains, including plenty of green food with plenty of exercise, is the proper way to insure good hatches. See that your hatches are normal. Oftentimes failures are caused by not being prepared to care for chicks. All coops or buildings that are to house the chicks should be thoroughly cleaned and disinfected. See that the brooder or hover is in good running order. Don't forget the straw, sand and chaff for the floors where your chicks are housed. This promotes exercise and warmth. Beware of chilling your chicks and exercise great care in not letting them crowd. If chicks go into the brooder strong and healthy and later many begin to have drooping wings and toe-pulling starts, it is an indication that the chicks have been overfed and have not been made to exercise enough.

Care must be taken that the chicks are not too numerous in the brooder. Overcrowding will cause them to sweat and take cold, and roup is the result.

Please remember that the "e" in exercise is the same "e" in eggs and don't forget that cleanliness is the silver key to success in the poultry world. Ever-Laying Egg Farm.

Our Farm Help Column

The Wisconsin Farmer realizes the seriousness of the farm-help problem in the grain-belt states. In an effort to help our readers, this paper will publish for a limited time names and addresses of those who are in need of farm help, and also names and addresses of those who want jobs on farms. Will our readers who desire help please be as explicit as possible in their letters as to the kind of a man they need, whether for general all-round farm work, dairying, grain farming, live stock, and whether single or married man is wanted? Our readers will kindly conduct correspondence direct, using the addresses below in which they may be interested. Names will be published only once.

HELP WANTED.

John H. Kono, Dolliver, Iowa. General work. Wants experienced man.

FARM JOBS WANTED.

Joseph McCoy, Goldsberry, Mo.

SAVE YOUR CHICKS—FREE.

Write the Wight Company, 43 Main, Lamoni, Iowa, and they will send you enough Iowite Remedy, absolutely free, to save 40 chicks from White Diarrhea.—Adv.

MARATHON County Farms for sale. Bargains. Geo. Ritger, Cashier State Bank, Marathon, Wisconsin.

FARM LANDS.

FOR SALE—One of Wisconsin's best highly improved farms. If you want one made to order don't think you could improve on it. 229 acres all in one body. 180 acres under plow. 20 acres woodland with underbrush removed, balance pasture. All of his can be plowed as this pasture has no stumps or underbrush. No waste land. All heavy, clay loam soil, same as the best in southern Wisconsin. Lays fairly level, just enough slope to give the same good drainage. Nice 9 room house, lawn, grove, large basement barn 36x84, cement floor, gas and windmill water system. Other buildings, 4½ miles from Ry. town and seven miles from county seat, city of 3,500. Fine neighborhood. Corn, cattle, hogs main crop. Price $110 per acre, easy terms, worth more. Ry. fare refunded if not found as advertised. Write H. C. Inenfeldt, owner, Menomonie, Wis.

NORTH DAKOTA is essentially an agricultural state. In past five years it ranked first in production of wheat twice; twice it was second and once third; always first in production of spring wheat; also flax, equalling production of all other states. Once it was first in barley—never below third; never below seventh in rye or oats. Has made great increase in corn and stock. You can still obtain home there without commission to us, while land is still cheap. Easy terms. Write at once for plan direct dealing. J. S. Murphy, Immigration Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minnesota.

OREGON & CALIFORNIA RAILROAD CO grant lands. Title to same revested in United States by act of Congress dated June 9, 1916. Two million three-hundred thousand acres to be opened for homesteads and sale. Timber and agricultural lands. Containing some of best land left in United States. Now is the opportune time. Large sectional map showing lands and description of soil, climate, rainfall, elevations, etc. Postpaid one dollar. Grant Lands Locating Co., Box 610, Portland, Oregon.

HERE IS YOUR CHANCE—Get a home; $1.00 per acre down and long time on balance. Hardwood timber land with timber enough to pay for the land and build your buildings, close to market, school and cheese factories. Clay loam soil all tillable. Taylor Co., the clover and dairy belt of Wis. Rib River Land Co., Medford, Wisconsin.

THE cream check is the thing! No where are conditions so favorable to the farmer and dairyman as here in Rusk county, where our company has opened up its own lands and offers them in tracts to suit at low prices and on the easiest possible terms. You won't know what you miss if you don't send for our literature before you locate. Flambeau River Lumber Co., Station D, Ladysmith, Wis.

A SMALL farm in California will make you more money with less work. You will live longer and better. Delightful climate. Rich soil. Low prices. Easy terms. Sure profits. Hospitable neighbors. Good roads, schools, churches. Write for our San Joaquin Valley illus. folders, free. C. L. Seagraves, Ind.Com'r, A.T.& S.F.Ry., 1959 Ry. Ex., Chicago.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

WHY NOT START this year? There will never be a more favorable time. Land will be higher every year. You want a dairy farm in Aitkin county. Make arrangements for it now by sending today for our free illustrated literature. Don't put the matter off. Arnold, Land Agent, Rock Island Railway, 153 Wolvin Building, Duluth, Minn.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Editor Home Dept., The Wisconsin Farmer, Madison, Wisconsin.

Food Selection.

The food we eat must furnish several different substances if we are to maintain bodily efficiency and health. These substances may be grouped under seven heads: Mineral substances, protein, starches, sugars, fats, cellulose, and certain little-known, but very important, growth-stimulating substances. The housewife, therefore, who plans her meals or attempts to save money on food without some knowledge of these substances and of the five simple groups of foods which supply them is very liable to omit from her meals some food essential for the growth of children or necessary to supply the family with the energy they need for their daily tasks.

To plan meals in the interest of family efficiency and economy at the same time, the housewife, fortunately, does not need to do elaborate sums in calories, or to have any intimate understanding of such terms as protein and carbohydrates. If she will group the various foods in her pantry, vegetable bins and refrigerator into five simple groups, and will see that foods from each of the groups appear in each day's meals, she can feel certain that she is giving her family the eight different substances which the body needs. This grouping will help the housekeeper, who wishes to save money or time to simplify her meals without making them one-sided or incomplete. It will enable her to determine whether the meals supply all the different materials needed and will prevent substituting one food for another which has an entirely different use.

The nutrition specialists of the U. S. Department of Agriculture have published suggestive grouping in Farmers' Bulletin 808, on how to select foods, which will help the housewife to group foods in a simple and effective way. The first group includes fruits and vegetables, without which the diet would be lacking in mineral substances needed for building the body and keeping it in good working condition; in acids which give flavor, prevent constipation, and serve other useful purposes; and in minute quantities of other substances needed for health. They give bulk to the diet, also, thereby making it more satisfying to the appetite.

Meat and meat substitutes constitute the second group. These, which include milk, skim milk, cheese, poultry, eggs, fish, dried peas and beans, and nuts, furnish protein, which is an important body-building material. In the case of children part of the protein food should always be whole milk.

Foods rich in starch make up the third group. This would include cereal grains, meals and flours, cereal breakfast foods, bread, crackers, macaroni and other pastes, cakes, cookies, starchy puddings, potatoes (white and sweet) and other starchy vegetables. Cereals come near to being complete foods, and in most diets they supply more of the nourishment than any other kind of food. It is not safe, however, to live only on cereals.

Foods upon which we depend for sugar are included in the fourth group. Molasses, sirups, honey, candies, sweet cakes and desserts, fruits preserved in sugar, jellies, and dried fruits are in this class.

The fifth and last group furnishes the body fuel—the fats. This includes butter and cream, lard, suet and other cooking fats, salt pork and bacon, table and salad oils. Without a little of the fats the food would not be rich enough to taste good.

Some food materials really belong in more than one group. For example, cereals supply protein as well as starch; potatoes supply starch as well as mineral matters, acids, cellulose and body-regulating substances, for which they are especially valuable (group 1); and most meat supplies fat as well as protein. These classifications show some of the common food materials arranged in the five groups according to their most important nutrients, and a study of them will show the housewife, who has been serving bread, potatoes and rice or hominy in one meal, that one, or even two, of these may be left out without omitting any important nutrient. They will show her that a custard, which is made of milk and eggs, two foods from group 2, would hardly be needed after a meal in which a liberal supply of meat had been served, and that a child does not need milk at the same meal with an egg or meat. It will suggest that baked beans or other legumes, or thick soups made of legumes, are substitutes for meat rather than foods to be eaten with meat.

If, by studying these groups, the housewife finds that she has provided tissue-building protein (group 2) and the necessary, though small, amount of tissue-building minerals and body-regulating materials (group 1) she may safely build up the bulk of the diet from whatever materials from the other groups that seem economical, wholesome and appetizing.

How to Can Peas.

To the Editor:—I noticed that Mrs. J. S. wants to know how to can peas, so I will tell her how I did so successfully last summer. It was my first attempt, but came out quite well.

I had a wash boiler with a tight-fitting lid, which seems to be necessary. I used Mason jars with new lids and rubbers. I took a board that fit in the boiler and nailed cleats on the lower side—two are enough, one at either end—to keep the jars from the bottom of the boiler.

The sooner the peas are canned after gathering the finer flavored they will be. Boil them three minutes, drain, throw into cold water, drain and pack closely in the jars, putting a teaspoonful of salt on top. Fill the jar full of hot water (should be boiling), put the rubber and lid on, not quite tight, and place in the boiler with enough water to come within an inch of the top of the jars, and cook three hours after they begin to boil.

Remove from the boiler and tighten the lids at once. If the seal should not be perfect the first trial, replace the lid with a fresh rubber and boil fifteen minutes more.

A little surer way is to boil them one hour each day for three days, changing the rubber each day, as you will probably spoil the one already boiled in loosening the lid a little.

Canning vegetables is not difficult, but it takes time and care. Corn and beans are canned in the same way, only I found it more expedient to put the boiling water in the can before I put in the corn, as the water would not fill all the air spaces when I poured it in last.

We have had home-canned vegetables all winter and still have a few. I expect to can more this time if possible. Mrs. C. C. Dye.

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Going to Make a Garden.

Dear Little Friends:—I always read your letters and enjoy them very much. I have often thought I would like to write a letter, so now I am going to do so and maybe some time I will write a story.

I am a girl of thirteen and I have dark brown hair and eyes. I weigh about 118 pounds and am quite short. I have three sisters and one brother.

I live on a forty-acre farm about seven miles from town. Our nearest neighbors live about sixty rods from us. One of my sisters and I have to walk two miles to school. We are having vacation now because the roads are so muddy. I am in the seventh grade. I love to read and am always reading when I haven't anything else to do. Nearly every night mamma reads aloud to us.

I am going to have a garden this summer and am going to raise pumpkins, watermelons, muskmelons, cabbage, tomatoes, onions, radishes, lettuce and maybe some early garden vegetables. I wish all the other girls and boys would make gardens. It is great fun. —Brown Eyes.

Wants to Make Bow and Arrow.

Dear Young Folks:—I should like to join your circle. We have had lots of snow here this winter, but now it is beginning to look like spring. The birds are back and the snow is just about gone.

Have any of the young folks had any experience in making a bow and arrow? I want to know what kind of wood to use and how to bend the bow and how to make the arrow go swift and straight. I don't know how to aim or what the shooting position is or how to hold the bow and arrow. I hope someone can tell me all about it. —Theodore.

The Dishwashing Game.

Dear Young Folks:—I have read your letters for a long time. I am eleven years old and am in the sixth grade at school. I have not been absent this term, but have been tardy a few times.

Will some of the young folks tell me how to play the game "Key to Unlock Character?" I have heard about it before, but do not know how to play it. I will tell you how to play the dishwashing game. My sister and I play it this way: As I wash the dishes I count them to see how many there are, and my sister counts them as she dries them. All of the dishes used in getting dinner ready must be counted—everything but the dish pans. Before starting we each make a guess and the one that makes the worst guess has to put away the dishes. If one guesses twenty-one and the other guesses twenty-three and the number of dishes is twenty-two, then we have to put away the dishes together. —Leona.

Has a Fine Team of Ponies

Dear Young Folks:—I am a boy eight years old and live on a farm of 292 acres. I go to school every day and am in the fourth grade. I love to read your letters every week.

I have many pets, one a little black dog named Nig. My brother and I have a team of Shetland ponies. We have harness, buggy and a saddle for them. We have lots of fun driving. Their names are Topsy and Madge.

This summer I am going to raise a great number of ducks, geese and chickens. I sure love the farm. —Ariel.

Rugs or carpets put away for the summer should be first thoroughly cleaned on both sides and beaten and then wrapped up in tight rolls protected by wrapping with tar paper. The additional covering or baling with burlap is not necessary except where the rolls or bales are to be transported or will require considerable handling.

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wisconsin.

1759—A practical house dress. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 7 yards of 36-inch material for a 36-inch size.

2052—Ladies' apron. Pattern is cut in 4 sizes: Small for 32 and 34 inches bust measure, medium for 36 and 38 inches bust measure, large for 40 and 42 inches bust measure, and extra large for 44 and 46 inches bust measure. It requires 5¾ yards of 36-inch material for a medium size.

Waist 1817-Skirt 1818—A simple, but practical combination. Waist pattern 1817 cut in 8 sizes: 34, 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Skirt 1818 cut in 8 sizes: 22, 24, 26, 28, 30, 32, 34 and 36 inches waist measure. To make and combine skirt and waist of one material will require 5⅝ yards of 44-inch material for a medium size. Two separate patterns, 10 cents for each pattern.

1729—A simple, becoming dress for the little miss. Pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 3 yards of 40-inch material for a 6-year size.

1731—Girls' "Middy" dress, with sleeve in either of two lengths. Pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 inches. It requires 4⅞ yards of 44-inch material for a 14-year size.

2056—A becoming dress for the growing girl. Pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 3¾ yards of 44-inch material for a 12-year size.

2041—Girls' underwaist and drawers. Pattern is cut in 6 sizes; 2, 4, 6, 8, 10 and 12 years. It requires 1 yard of 36-inch material for the waist, and 1¼ yards for the drawers, for an 8-year size. Ruffles on drawers will require about 2½ yards of edging, 3½ inches wide.

2050—Girls' one-piece dress, with bloomers. Pattern is cut in 5 sizes: 2, 4, 6, 8 and 10 years. It requires 3½ yards of 27-inch material for the dress and 2 yards for the bloomers, for a 6 year size.

1892—Ladies' yoke skirt, in raised waistline. Pattern is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅜ yards of 44-inch material for a 24-inch size.

2053—Ladies' dress, with sleeve in either of two lengths. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 5½ yards of 44-inch material for a 36-inch size.

Blouse 2061-Skirt 2063—A charming sports or beach costume. Blouse 2061, cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 36-inch material for a 36-inch size. Skirt 2063, cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. It requires 3⅞ yards of flouncing or bordered material 48 inches wide, or 4½ yards of 54-inch material for a 24-inch size. Two separate patterns, 10 cents for each pattern.

2062—Ladies' waist with sleeve in either of two lengths. Pattern is cut in 6 sizes: 34, 36 38, 40, 42 and 44 inches bust measure. It requires 2½ yards of 44-inch material for a 36-inch size.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for April 22, 1917.

Jesus Anointed at Bethany.

LESSON TEXT—John 12:1-11.

GOLDEN TEXT—She hath done what she could.—Mk. 14:8.

This is a lesson of Jesus in the home. It occurred at the beginning of passion week. We have before us the master; the worker, Martha; the worshiper, Mary; the witness, Lazarus; the traitor, Judas, and the people without. An unconscious bit of wisdom fell from the lips of that good housewife who exclaimed, "How much better my neighbors' houses look when I have my windows clean." Too much we are looking through the eyes of selfishness. Out of this lesson let us learn to look through unselfish eyes.

I. Unjust Criticism (vv. 1-6). It is six days before Jesus' last Passover. The accounts of Matthew and Mark suggest it to have been within two days, because they mentioned this feast after telling of the conspiracy of the chief priests and elders with Judas, who came to his determination to sell his Master after the reprimand given him on this occasion.

(1) The Value of Good Deeds. Jesus did not forget, in the supreme hour of his life, the friends whom he loved. To bring them some further spiritual gifts, he had come to their home in Bethany. Doubtless he also had in mind the desire to nourish the faith which had been kindled in the hearts of all by the resurrection of Lazarus, just as he returned to Cana after having performed his first miracle (John 4:54). Jesus was Very God of Very God, yet he was very much of a real man; therefore, he enjoyed the pleasures of home as much as other men, and the joys of kinship and brotherhood.

(2) The Wealth of Good Deeds. Out of her love Mary expended $51, probably her whole treasure, in the purchase of this alabaster box, and put it aside to use it upon him at the proper time. We do not think that she stopped to calculate the cost of this ointment. Love never estimates value. Her deed proved a safer guide of conduct than the calculating prudence of Judas and the other disciples (see Matt. 26:8). Such deeds are always looked upon with suspicion. The Iscariots usually are the leaders in criticizing the actions of others. Envy lay at the bottom of their criticism, but good deeds are unconscious, for we read that 'the house was filled with odor."

(3) A Standard of Good Deeds (Mark 14:8): "She did what she could," and we have also the record of good deeds, a memorial to her (Mark 14:9). A large number of people who never give of their own to the poor nor to the kingdom of God are willing to criticize others who do give out of the gratitude of their loving hearts.

II. Gracious Commendation (vv. 7-11). Jesus praised where his disciples and Judas criticized. The poor they always had with them (Mark 14:7). This must have been a challenge that evidently they had not attended to the poor as they should. Jesus also tells them frankly that whatsoever they do for him they must do speedily. Jesus' judgment upon Judas is a rebuke of the disciples; his exposure of the sophistry of the critics and of their subtlety is suggestive. Upon Mary's act he bestowed the highest possible praise. "She hath done what she could." That is all that is asked of anyone (II Cor. 8:12). Such commendation as Jesus bestowed upon no other and his wonderful predictions concerning her (Matt. 26:13) have been literally fulfilled. Jesus' judgment upon Mary is also suggestive. He shielded her, "let her alone;" He approved her works as being good, and he interpreted her innermost purpose in the act which she had performed. This outward act was literally the pouring forth of her heart's adoration and worship. Martha was in part taken up with her household service. Lazarus was in part taken up with his enjoyment of the presence of Jesus, but Mary was wholly taken up with Jesus himself. Does the record surprise us: "Wheresoever this gospel shall be preached throughout the whole world, this also which she hath done shall be spoken of for a memorial of her?" Judas, under the judgment of Jesus, was stung (Matt. 26:14) and hurries at once to the enemies of Jesus to strike a bargain with them for the betrayal of his Lord, though he did not secure from these enemies the equivalent of what she had poured upon him. Christ will be no man's debtor. He takes the poor offerings we lay before him, and crowns them with the richest reward. Mary's gift of ointment received words of commendation of which she never dreamed, and a reward far beyond her fondest hope, and has been the fount of countless deeds rich with love. Many people had gathered, not only for Jesus' sake, but that they might see Lazarus also. He drew people because of what Jesus had done for him, yet he drew them to Jesus. This brought him also under condemnation, for we must share the bitterness of the foes of Jesus.

Concrete walks keep a lot of mud from being tracked into this home.

A Simple Concrete Job

Women like a concrete walk from house to barn. It keeps mud out of the house. Concrete steps and a concrete slab around the pump are also simple, inexpensive and permanent improvements.

You can easily build these yourself. The only materials necessary are portland cement, sand, and pebbles or broken stone. Your local dealer has the cement. You can probably dig the sand and pebbles on your farm or nearby.

Concrete is the material used for city sidewalks because it lasts. You want your walks to last, too.

Our free illustrated Bulletin No. 137 will tell you how to build concrete walks, concrete feeding floors and barnyard pavements. Write for your copy.

CONCRETE FOR PERMANENCE

Stephenson's Holstein Sale.

As prophesied, the Stephenson Dispersion Sale held at Lake Mills April 6th and 7th, proved to be one of the record breakers in Wisconsin Holstein history. One hundred seventy-seven head sold for an average of $325. The splendid average is not only a tribute to James Torrey, whose skill as a breeder and clean reputation gained the complete respect and confidence of the buyers, but also to F. H. Everson, sale manager. Mr. Everson's wide experience as a sale manager and the excellent facilities at Lake Mills for conducting an auction made it possible to conduct the sale in a smooth and orderly fashion, which is of the utmost importance to get the maximum price for animals run through a ring. Another of the most gratifying things about this event was the fact that we have every reason to believe the animals sold are the kind that will do their owners good and will prove to be a profitable investment. There were so many animals deserving of special comment that it would be impractical to give them all mention; suffice it to say, however, that the splendid semi-official yearly work represented in the herd was appreciated. Many breeders came to the sale to learn the attitude of the average buyer concerning this point and we did not hear of any one expressing opinions discrediting yearly work after the sale. The Edgewood Farms, Pewaukee, were the heaviest Wisconsin buyers, while Gustave Pabst and R. E. Benson took some of the choicest individuals of the sale. The following is a list of sales:

FEMALES.

Zerma Pride, Nov., 1906; Gustave Pabst, Donovan, Wis. $400
A. W. P. Zerma Pietertje, March, 1915; Geo. Minshall, Darian, Wis. 580
A. W. P. Zerma Pride, March, 1913; C. J. McCulley, Reedsville, Wis.. 205
A. W. P. Zerma Pride 2d, Nov., 1916; Ernest Maltby, Mokena, Ill..... 280
Queen Walker Mercedes Molly Zell, Nov., 1909 M. J. Vea, Stoughton, Wis. 605
Rhaitgundis Mercedes Molly Zell 3d, Nov., 1909; Homer R. Dopp, Oconomowoc, Wis. 335
A. W. P. Rhaitgundis, April, 1913; Homer R. Dopp 310
A. W. P. Molly Zell, March, 1916; S. E. Jensen & Son, Clinton, Wis... 200
Victoria Segis Johanna, April, 1910; Kirchhefer 800
A. W. P. Johanna Segis, Dec., 1914; Ernest Maltby 750
No. 13½, G. A. Carter, Mauston, Wis. 100
A. W. P. Victoria Segis Johanna, May, 1916; Ernest Maltby..... 400
A. W. P. Segis Johanna 2d, Oct., 1915; Jas. Torrey, Kenosha, Wis.. 310
Queen Segis Johanna of Lake Sice, May, 1910; F. H. Scovel, Butte Des Mortes, Wis. 190
A. W. P. Queen Segis Johanna, Oct., 1915; Ernest Maltby 420
A. W. P. Queen Segis, Dec., 1913; Ernest Maltby 1125
A. W. P. Queen Segis 2d, Jan., 1916; Ernest Maltby 450
Gertrude Wayne Pontiac, March, 1911; Vea & Hildebrand, Stoughton, Wis. 355
A. W. P. Pontiac Girl, Sept., 1913; Ernest Maltby 410
A. W. P. Gertrude Wayne, Nov., 1914; R. E. Benson, Dousman, Wis. 415
Gertrude Wayne Johanna, March, 1914; E. B. Hill, Edgerton, Wis.. 190
Gladys Wayne, Jan., 1908; W. G. Banks, Jonesboro, Ark. 600
No. 27½, C. J. Ward & Sons, Ft. Atkinson, Wis. 265
Gertrude Pontiac Wayne, May, 1911; W. G. Banks..... 450
Pauline Wayne 3d, July, 1906; Hamslett & McNutt, Oxford, Wis. 260
Primrose Wayne, Feb., 1908; Cash Faville, Lake Mills, Wis..... 110
A. W. P. Primrose Wayne, March, 1913; H. Nelson, Union Grove, Wis. 480
Gertrude Wayne Colantha Fayne, March, 1911; Edw. G. Race, Omro, Wis. 410
Queen Netherland Wayne 2d, April 1903; W. G. Banks..... 125
A. W. P. Queen Netherland Wayne, Jan., 1916; Ray Benson, Donovan, Wis. 250

The Compensation Bill is Merely an Equal Rights Bill

THE so-called Compensation Bill now before the Wisconsin Legislature might be called by any other name. It doesn't grant compensation to anybody for anything. It only grants the right to sue. That is a right every other citizen enjoys—to go into court and ask payment for injury or damage sustained. It might better be called an Equal Rights Bill.

It could be called a *Legal Corrective Bill* for it only corrects the statutes which today discriminate against liquor men, denying them the otherwise universal right of citizens to bring civil action for damages or losses.

If you are run down by a street car or automobile, compensation or payment for your injuries is not handed to you. You have to prove your case in court. But the point is right here—you have the privilege and opportunity of doing so. The legal avenue is opened to you. You are allowed to sue for damages.

And that is all the so-called Compensation bill provides. It does not grant Compensation to brewers or anybody else in case of Prohibition. It provides no payment and carries no appropriation. It only opens the legal way so that the man or corporation effected can go into the Circuit Court and ask for a hearing of his claim for damages. Then he must prove his case before a jury, just the same as any other petitioner.

And *you* sit on the jury. You grant him a measure of Compensation or you do not, according to the evidence.

Is there anything unreasonable or unfair in that?

No. 27 *The Brewers of Wisconsin*

ABSORBINE STOPS LAMENESS

from a Bone Spavin, Ring Bone, Splint, Curb, Side Bone, or similar trouble and gets horse going sound. It acts mildly but quickly and good results are lasting. Does not blister or remove the hair and horse can be worked. Page 17 in pamphlet with each bottle tells how. $2.00 a bottle delivered. Horse Book 9 M free.

ABSORBINE, JR., the antiseptic liniment for mankind, reduces Painful Swellings, Enlarged Glands, Wens, Bruises, Varicose Veins; heals Sores. Allays Pain. Will tell you more if you write. $1 and $2 a bottle at dealers or delivered. Liberal trial bottle for 10c stamps.

The Inter-County Breeders' Association Sale.

The intercounty Breeders' Association fourth semiannual sale held at Watertown, April 5, 1917, was not up to its predecessors, as the list of the sales will indicate. The fact that it came just before the Stephenson sale may have had something to do with it, but inasmuch as the cattle consigned were not up to the usual standard of excellence undoubtedly had more to do with the low average received. There were, however, some splendid individuals consigned. Chief of these was Oak Homestead Fobes, an almost perfect individual and from a line of breeding recognized as being about the best Wisconsin has produced. Mr. Elbert Early, of Kansas, bought this animal consigned by T. J. Mullen for $475 and topped the sale. The following is a list of sales amounting to $100 or more:

FEMALES.

Vera Tritomia Woodcrest, Dec., 1916; F. G. Bartlet, Juneau, Wis. $120
Lady Vera Beets, June, 1913; Frank Gronert, Watertown, Wis. 165

THE MARKETS.

Union Stockyards, Chicago, April 14th.—A booming cattle market last week and the first two days of this week has been checked by a liberal run due, in part, to feed scarcity and to the continuous advance in corn, but apprehension of arbitrary fixing of values by the federal government, as improbable as it is, has had much to do with it. This idea got into circulation and has dislodged many cattle prematurely, cattle that will be sadly needed later on when they would have come to the shambles in seasonal manner. The only proposition regarding price control that has been seriously made is the fixing of a minimum which would afford the producer assurance of remuneration and relieve him of apprehension of overproduction. The law of supply and demand will doubtless continue to govern maximum values.

Scarcity is and will continue to be for some time to come the keynote of the general live stock situation. Cattle receipts this week may look liberal from a statistical viewpoint, but at least 25 per cent of the crop represents premature marketing. Current prices for all classes of live stock are legitimate, no suspicion of manipulation attacking. Under war and semifamine conditions almost anything is possible, and it is improbable that top levels of the season have yet been touched. While the cattle market this week is closing in a slump and the hog market is off a point or two from the high time early in the week, the week's trade as a whole has been at the highest price levels in history. New top prices recorded during the week include beef steers at $13.45, hogs at $16.50 and lambs at $16.

Advances ranging from 15@35c in beef and butcher cattle values the first two days this week have since been lost and some of the beef steers now selling between $10.50 and $12.00 show 10@25c lower levels than a week ago. A run of nearly 23,000 cattle here Wednesday, the largest one-day crop for nearly two months, was the sole influence of depression. Buyers were quick to seize their temporary advantage to force price swings in their favor after having been at the mercy of the selling side for some time past, and they simply made the most of their opportunity. The dressed beef market is holding up well, but record prices are in force and they are restricting consumer call, as they doubtless will continue to do as the season advances. A number of loads of fat, heavy bullocks crossed the $13 line this week, with a few loads of the primest selling up to $13.25@13.45. The latter are specialties that have not been involved in trade vicissitude the last few days, but a good class of 1,325@1,475-pound steers have gone at $12.60@12.75 that were the $13 kind early in the week and declines from Monday's high spot measuring from 35@50c apply to most steers now selling between $10.50@12.50. On the lower qualitied light cattle the decline is less marked and killers are still getting very few steers with a decent flesh covering at $10 and below. Where feed is available, throwing over medium and light cattle at this juncture is questionable policy. The beef market is in healthy condition and values on a legitimate basis, but the market will not stand crowding. The excess this week has been wholly of cattle that could have been carried along and distributed. Many of them would not have been dumped, but for the arbitrary price scare, and letting them go at a sacrifice will be regretted.

Butcher cattle have followed much the same course as the steer market, advancing sharply to new record levels early in the week, but losing all the gains then scored, excepting on the top cream of the offering, before weekend. A spread of from $6.15@6.65 is now taking plain to good canner cows, with a meaty cutter kind ranging upward to $7.25. Most of the butcher cows of fair to good class are selling at a range of from $7.75@9, good to right choice 1,100@1,300-pound beef cows from $9.15@9.85 and choice to prime heavy Kosher cows up to $10.25@11.50. Some trashy, light, thin heifers are selling down to $6.50, but few decent killing heifers go much below $8 and $8.50@9.75 is taking a medium to good fat class, choice corney heifers selling largely between $10.25@10.75 and occasional prime lots upward to $11.50 and even $12, but they are decided specialties. On the week's high spot, ch ice heavy bologna bulls sold up to $9, stillers to $9.90 and odd prime corn feds to $10.50, all new price records, but the market is closing the week largely 25@35c under that time and back to last week's closing levels. Most of the bologna bulls are now selling at $8.15@8.65, common light canner bulls down to $7 and under, and the bulk of the butcher grades at $8.85@9.50. Good to choice veal calves are on a $13@13.50 basis, with common to plain light at $12@12.75, a choice 300-pound class around $9@9.50 and good, heavy and light throwout "bobs" around $8.

Summer grazing in the corn belt promises to be on the smallest scale in many years, meadows and pastures being rooted up everywhere in an effort to plant a record corn acreage. This policy and the high cost of thin, young cattle is working against a free trade in stockers and feeders and a good share of the supply here the latter half of this week sold 15@25c lower than the high time last week. A range from $8.50@9.50 has taken the bulk of the stock and feeding steers this week, choice strong weight feeders being quotable to $10 or better and some common light stockers selling below $8.

The elevation of top hogs to $16.50 on Tuesday of this week was followed by a 25c drop in prices after the first rounds on Wednesday, but the market refused to be held down and the better grades rebounded 10@15c from the midweek low spot. On the basis of yesterday's closing market, prices showed advances of mostly 60@65c over the corresponding day last week.

When and How to Spray Wisconsin Fruit.

J. G. Moore, of the Wisconsin College of Agriculture, horticultural division, has given us the following pointers on when and how to spray Wisconsin fruits:

Apple Sprays.—To control scale insects, spray with lime sulphur shortly before growth starts. Use five gallons commercial lime sulphur in forty to forty-five gallons of water, which is known as winter strength lime sulphur.

Prevent Plant Lice.—If plant lice were present during the past season, spray with 50 per cent nicotine sulphate, one part to 1,000 to 1,200 of water (one pint to 125 to 150 gallons of water) to which should be added four pounds of soap in solution. Apply just as the buds begin to show green.

To Have Pest-free Trees.—The above applications may or may not be necessary, but the following applications, known as summer spraying, must be made if the best results in producing pest-free fruit are to be secured:

1. Spray with a fungicide and arsenate of lead when blossoms show pink and have mostly separated in the cluster. If plant lice are present, add 40 per cent nicotine sulphate, one part to 1,000 to 1,200 of spray material.

2. Spray with fungicide and arsenate of lead from three to five days after most of the petals have fallen.

3. Spray with same material ten days to two weeks later.

4. Spray with same material about July 20th to 30th, depending upon the section of the state and whether the season is relatively early or late.

If the weather is moist and warm, make an application between applications 3 and 4.

The fungicide used may be either lime sulphur, one and one-fourth gallons to fifty gallons of water (summer strength) or Bordeaux mixture.

Arsenate of lead powder is more conveniently used than paste. One and one-half pounds to fifty gallons of spray material will be a satisfactory strength.

Bordeaux mixture is probably preferable as a fungicide in all applications except in numbers 2 and 3, but the price of the materials may at times make it advisable to substitute lime sulphur.

Sprays For Cherries.—It is not necessary to spray the cherry for scale insects. Bordeaux is preferable to lime sulphur as a fungicide on cherries.

1. Spray with fungicide and arsenate of lead just before blossoms open, using material of the same strength as that given for the summer sprays of the apple. Recent experiments indicate that this application may not be necessary.

2. Spray with same material when calyx (shuck) falls.

3. Spray with same material two to three weeks later.

4. Spray with same material as soon as possible after fruit is picked.

If aphis (plant lice) are present, spray with nicotine sulphate, one part to 500 to 700 of water. Add one and one-half pounds of soap to each fifty gallons of water.

Fighting Plum Pests.—1. Spray with fungicide (summer strength) and arsenate of lead just before blossoms open.

2. Spray with same materials when calyx (shuck) falls.

3. Spray with same materials two to three weeks later.

4. Use a fungicide shortly before fruit begins to ripen.

Bordeaux For Grapes.—Spray with Bordeaux mixture about June 10th to July 1st. Other applications may be made if fungous diseases appear. Use kerosene emulsion or nicotine sulphate if leaf hoppers or other sucking insects become troublesome.

Currant and Gooseberry.—1. Use nicotine sulphate, one pint to 125 gallons of water, to which add 3 pounds of soap in solution, just as buds show green.

2. If aphis are present, repeat in about ten days.

3. Spray with Bordeaux mixture and arsenate of lead about June 10th.

4. Spray with same materials after fruit is harvested.

Arsenate of lead or Paris green should be applied whenever the currant worm is present. Examine plantation at least once a week from May 15th to September 1 for the presence of this pest.

E-B BALING PRESS

The short baler with the long stroke. Big feed opening—long baling and tying chamber. Automatic safety device prevents breakage. Built for high speed, turns out a bale a minute. Light in weight—sturdy frame—short wheel base—easy to handle in small space. Supplied either with E-B Gas Engine or with belt equipment. Look for the E-B trade mark. It's our pledge and your guide to quality.

Beautiful Picture for You

Solve This Puzzle

Here are seven ponies in a pen. By drawing three straight lines you can put each one in a pen by himself. If you can do this we will send you as a prize, a beautiful panel picture, "The Popular Girl," printed in many colors. This is a wonderful picture. All you have to do is enclose four cents stamps in your letter to pay postage and cost of mailing. We will also send a certificate for 1500 Free Votes in our grand contest for a beautiful Shetland pony.

Fine Pony Given Away

Remember the Pony will absolutely be given away in the grand contest which we will tell you all about. Send your answer at once so you can be entered in the great contest. In case of a tie a pony will be sent to each person so tied. Write me today.

THE PONY MAN Dept. 608 Des Moines, Iowa

Live Stock and Commercial Field Notes

Collected by Representatives of The Wisconsin Farmer

Consignments at Fond du Lac County Sale.

ATTENTION of the Holstein breeders of the state is now directed to the big Fond du Lac county Holstein breeders' sale to be held at Fond du Lac, April 26th and 27th. This is to be one of the great sales of the year and our readers will be interested in some points concerning the several consignments. F. J. Bristol's consignment, consisting of fifty head from his own herd, offers an opportunity to get animals having a high percentage of Korndyke and King Segis blood. Probably no herd in America has more of the blood of these two famous sires than the one from which this consignment is coming. There are 44 females in this consignment, most of which are bred to Adventure Lad (165686) a 26th son of Spring Farm King Pontiac 6th. The dam of Adventure Lad will be one of the special features of the sale. She has 20.04 pounds as a junior two year old, 26.57 as a three year old and is one of the most beautiful cows in the state of Wisconsin. Mr. S. H. Bird is consigning some young stock from his herd which represents one of size, good individuality and consistent production. There are several families of three to five generations in the herd which indicate that these animals should be able to reproduce their kind. W. J. Gillett & Sons' consignment contains four daughters of King Peter Lyons and two daughters of 30-pound cows. It will be remembered that this consignment is coming from the well-known herd that produced Colantha 4th's Johanna, probably the best known cow of the Holstein breed. In S. C. Stanchfield's consignment we have eight cows and heifers bred to Colantha Johanna Champion 4th (113134) including an 18-pound daughter of a 27-pound cow and a 23-pound bull sired by Colantha Johanna Champion 4th. Henry C. Weber's and H. W. Bennett's consignment consists of 18 splendid daughters of Champion Johanna de Pauline (94988) a sire that is closely bred to Colantha 4th Johanna, being sired by her noted son, Colantha Johanna Champion. The dam of Champion de Pauline is Johanna Pauline 4th, with a record of 25 pounds in seven days and 731.25 pounds in a year. These daughters are uniformly good individuals and are from heavy-producing dams. They are bred to produce and should do some one a lot of good. Mr. W. H. Steiner is consigning 12 promising young cows and heifers to his 30-pound bull, Colantha Belle Boy Duchess (139113). He is also consigning two fine bull calves. One of them is out of Beauty Aaggie Grace 25.87 pounds which makes him practically a 26-pound bull. His sire is Colantha Belle Boy Duchess, 30-pound sire, so that he is royally bred and well backed by A. R. O. work. See page 23.—Adv.

Worms in Hogs.

IF your hogs have worms, you can't possibly expect them to put on weight in a short time, and that is the only way to make your hogs pay. Try putting Dr. Hess stock tonic in the swill or feed every day and watch the change. In a short time you would never know them for the same hogs. They will eat greedily, take on weight quickly and be able to ward off contagious diseases, now that their systems are right. Disease attacks only the weak and out-of-condition animals, never the strong, vigorous ones. A word about feeding your stock. When fed dry feed and stabled inside it is easy for them to get "off feed." Give them in every feed a little Dr. Hess stock tonic. This will keep them toned up, aid their digestion and generally improve their health. Below is given the ingredients of Dr. Hess stock tonic so you can see what it is made of and what each is for. Nux vomica, nerve tonic, aids digestion. Quassia, appetizer, worm expeller. Iron, blood builder, worm expeller. Sulphate of soda, laxative, acts on liver. Sulphate of magnesia, increases secretion. Nitrate of potash, acts on kidneys. Charcoal, prevents unhealthy fermentation. Dr. Hess, who is a doctor of veterinary science as well as a doctor of medicine, after years of veterinary practice, compounder the above mixture. So sure is he that it will expel the worms, add to the weight and put your hogs in healthy thrifty condition, that he has arranged with your dealer to supply you with enough for your stock, and if it does not do as claimed return the empty packages to him and your money will be returned. The manufacturers, Dr. Hess & Clark stand back of this guarantee and they have over 28,000 dealers in the United States and Canada.—Adv.

Seventy-five Years of Farm Tool Making.

THE P. & O. line of light draft plows, harrows, planters and cultivators are noted for their great strength, simplicity of construction and ease of operation. They are made in all sizes and types, in order to meet every condition in all sections. The Parlin & Orendorff Company, Canton, Ill., manufacturers of this line, have been in business for three-quarters of a century and the construction of their tools is based upon the knowledge gained from this long experience. Every farmer who is in need of one or more tillage implements should write to the company for their catalog which will be sent free on request, as advertised on page 18 of last week's issue.—Adv.

Herefords Numbering Ninety Head.

WE have just "discovered" one of the largest if not the largest Hereford herds in the state of Wisconsin. They are owned by L. M. Scott & Sons, Bagley, Grant county, Wis. The Scotts have been breeding and raising Herefords for the past ten years and have a herd of females numbering around 90 head. They have a herd that will justify publicity and the owners have made a mistake in not letting the people of the Northwest know that there was such a good herd of "white faces" in this territory. Their breeding herd is made up of cows from the noted Hereford herds namely, Luce & Moxley, Birch & Thompson, Van Natta, S. L. Brock, Geo. Leigh and others. Their cows are big and from the looks of the calves on the place, every cow of breeding age has a youngster. We believe that the Scotts can pick out 30 breeding cows that would equal any herd, other than show cattle, in the state. The senior herd bull is Beau Valentine by Director by the well-known Dandy Rex. The dam is by Columbus 19th by Columbus, the noted show bull. The young stuff on the farm speaks for this fellow as a sire of merit. The junior bull is Lad's Perfection, the real attraction on the farm. Sired by Bonnie Lad by Bonnie Brae 24th and his dam, Sister Perfection 2d is a full sister to old Perfection. He is bred in the purple and individually he is hard to fault. The other bull in service is imported Curly Boy, imported as a yearling by Geo. Leigh. Keep this herd in mind, it will be heard from, for James Scott, who is the cattle man, is a real caretaker and he has the cattle to work on, and the combination of the two generally gets good results.—Adv.

Wisconsin's Foremost Angus Herd.

MANY of the beef cattle men of Iowa have the idea that in traveling over the state of Wisconsin they would not see anything but "black and white" cattle, or dairy cattle of some breed. It is a fact that many farmers and breeders of the central states do not think of Wisconsin, only as a dairy state. In this connection we wish to call attention to an Aberdeen Angus herd owned by the McKevitt Brothers, Bloomington, Wis. There are few herds in Iowa that can boast of 100 head of "doddies" the equal to the McKevitt Angus. They are breeders in the strict sense of the word and while the McKevitts do not make a lot of noise, they are busy raising a class of cattle that are ready sale. The farm buildings are spacious, and irrespective of the weather the cattle are propertly housed and cared for. One never sees a lot of old thin, cows around this farm. High-class bulls have always been used in this herd. The young stuff on the farm is sired by a Pride bull, he being by a son of Black Woodlawn, and out of a granddaughter of Prince Ito. The present herd bull is Pawpaw, a pride by Protine by Baden Lad out of Pride McHenry 91st by Prince Pico by Bobby Dobbs. This is one of the best young bulls in the Northwest. There is a yearling bull on this farm that should be in the hands of a show man, he is the best bull of his age that the writer has seen. It will pay some of the Iowa men to cross the river and take a look at this great beef herd in a dairy state. Bloomington is in Grant county, the southwest county of the state.—Adv.

Features of the Sharples Separator.

SOME of the advantages of the Sharples suction feed cream separator are that it skims clean at widely varying speeds, it gives the same thickness of cream regardless of speed changes, it skims more quickly when turned faster, it is easy to clean and it has a low supply tank that eliminates a back-straining lift of the milk pail. These and other features are fully explained in the new catalog of the Sharples Separator Company, West Chester, Pa. Write for the catalog and kindly mention The Wisconsin Farmer when you write.—Adv.

Kirkpatrick Bros.' Holsteins.

THE Kirkpatrick Brothers, of Reedsburg Wis., have one of the best herds of registered Holsteins in that vicinity and if you need a good cow or a few heifers safe in calf to a King of the Pontiacs bred bull, write this firm. They also have some young bulls coming on. As mentioned above, they have good cattle and will give you a good deal. Write and mention The Wisconsin Farmer.—Adv.

Some Guernsey Bargains.

DO YOU know that there is a "real" herd of Guernseys at Platteville, Wis., owned by Chas. A. Wilkins? Mr. Wilkins has been breeding Guernseys for about eight years and in that length of time has built up a wonderful herd. Heading the herd is Langwater Frenchman, a fine, large bull with one A. R. daughter and several more on test. His sire is Dolly Dimples May King of Langwater, he by King of the May out of Dolly Dimples, champion, three and one-half years, 907 pounds fat. Few Guernsey herds have at the head a bull with the individuality and breeding that Langwater Frenchman has and Mr. Wilkins was very fortunate in getting this fellow. At this time he is offering seven of this bull's sons for sale—your opportunity. The following are four of the dams: Imported Daisy of Mound City, A. R. 10,066 milk, 514.86 fat; Lily Ella's Maid of Richmond, A. R. 9,507.5 milk, 515.38 fat; Goldie of Mound City (now on test) 196 days, 238 pounds fat; Mabel Olive A. R. 9,181.2 milk, 494 pounds fat as junior two year old. Mr. Wilkins also has a good tried bull for sale. A four year old sired by a son of Glenwood Boy of Haddon, out of a dam with a 530-pound fat record, as a junior two year old and now on retest and barring accident she will make better than 700 pounds fat. One of the best cows in the herd. A tried sire at a fair price. Mr. Wilkins has the goods, write him for sale list and please mention Wisconsin Farmer. See this page.—Adv.

Abundant Power and Light For the Farm.

THE Delco-Light farm electric plant brings city comforts and conveniences to the farm. It keeps the young folks on the farm and makes life happier and brighter for them. The Delco-Light outfit is simple and economical; the expense is reasonable and the advantage is very great indeed. It will light the home, run machines like washers, cream separators, churns, electric fans, and will also pump water for the stock. If you want to know more about Delco-Light on the farm write to the Domestic Engineering Co., Dayton, Ohio, for complete information, mentioning The Wisconsin Farmer in your letter. See advertisement on page 6 of last week's issue.—Adv.

Field Men for The Wisconsin Farmer.

J. R. Garver, eastern half of Wisconsin. Address Room 201, Washington Building, Madison, Wis.

T. P. Shreve, western half Wisconsin and eastern Minnesota. Address Room 201, Washington Building, Madison, Wis.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

W. S. Steele, northwest Iowa, South Dakota, western Minnesota. Address Box 109, Sioux City, Iowa.

M. T. White, western Iowa and northeastern Nebraska. Address 4015 Izard St., Omaha, Neb.

A. T. Cole, Missouri. Address 3900 Holmes St., Kansas City, Mo.

A. L. Gray—Chester Whites.

AS usual, A. L. Gray, Mt. Hope, Wis., is having good success with his spring crop of Chesters. About 50 head out of the "danger stage" three more sows to farrow. We have seen no pigs that are doing better than the Gray Chesters. He has a strong average with few runts. Most of them are by his good boar, Paddy, a son of the noted Schoolmaster, although there are a few good litters by High Style, the top boar in Chas. Richards' 1916 boar sale. He is by Elmo Chief by St. Elmo, and is a good breeding boar. There is one good litter by Combination Giant the good Iowa boar. These pigs will be shipped at weaning time, a single boar or gilt, a pair or trio, unrelated. Hogs are bound to be high next fall, so it will be to your advantage to buy early. Please mention this publication when writing.—Adv.

Opportunity to Buy Red Polls.

IF YOU wish to buy Red Polls, males or females, write Cloverbelt Farm, Hamburg, Wis. Just at this time they have a surplus of young stock. They are sired by Nerlar Jr. 18301, a bull that was grand champion at the state fair in 1915, and a sire of unusual merit. The foundation for this herd came from one of the best breeding establishments in this state and you will be pleased with the cattle raised on this farm. Write your wants and mention The Wisconsin Farmer.—Adv.

R. A. Morley Co. Short-horns.

R. A. MORLEY CO., Baraboo, Wis., are breeders of Short-horns and Percherons. Just now they have for sale a number of bulls, red white and roans. They come from good milking dams and if you are in need of a bull of this breed, write for particulars. See page 23.—Adv.

Line Bred "Yeksas."

WITH this issue of The Wisconsin Farmer, A. O. Oleson, Livingston, Wis., starts a card calling attention to his Yeksa Guernseys. This is the first time that Mr. Oleson has ever done any advertising, but he has a herd of Guernseys that are worthy of advertising and recommendation. We doubt if there is another herd of Guernseys in Wisconsin with as much Yeksa breeding. His farm has been rightly named Yeksahurst. Mr. Oelson is an experienced dairyman, having been with Guernseys for the past ten years. For five years he was half owner of the Helendale Guernseys at Athens, but for the past few years he has been located near Livingston, where he purchased a 200-acre farm. Twenty-five females represent his breeding herd. Among his good cows is Pattinette, a granddaughter of Guydette and Benjamine. She is in test now and bids fair to produce over 700 pounds during the year. Yeksanette is a daughter of the above cow sired by the well-known Increase. She has been in test 126 days and has to her credit 221 pounds fat. A twenty months old bull out of this cow is for sale. Madame Cherie is another one of the good ones. She is sired by Endymion, the national grand champion. This cow is in test now and the first 29 days in January gave 52 pounds fat. Missy Willow has been in test 131 days and has made 246 pounds of fat. Her dam has an A. R. record of 410 pounds at two and one-half years. Space will not permit us to mention all of the good record cows in this herd. All of the above are line-bred Yeksas, none of them are in-bred. There are only two cows in the herd that are not of Yeksa breeding. The bulls being offered are outstanding good individuals and will please. Write for tabulated pedigrees and mention The Wisconsin Farmer. See page 21.—Adv.

The Birch & Thompson Hereford Sale.

NO doubt the greatest lot of Hereford cattle ever sold in the state of Wisconsin will be sold by Birch & Thompson at their farm near Lake Geneva, May 18th. Sixty head have been cataloged—50 females and 10 bulls. This will include breeding matrons with calves at foot and yearling and two-year-old heifers. Of the latter there are some that are eligible to the big fairs this fall and it will be a grand opportunity to secure some show heifers. In Bonnie Brae 43d, this firm has a wonderful bull, in fact we believe him to be the best aged bull that we have seen in th state. Particular breeders should have some of his get. We will have more to say about this offering later, but in the meantime send your name for one of their illustrated catalogs. Herefords are gaining in popularity in Wisconsin and those that get in on the ground floor will reap the harvest in years to come. When sending for catalog please mention The Wisconsin Farmer.—Adv.

Schoenfelds Have Good Sales.

C. J. SCHOENFELD & SON, Fox Lake, Wis., report very good sales in Poland China hogs and Short-horn cattle. They now have 25 red, white and roan calves in one lot and six bulls ready for service. They are also offering 10 brood sows, May and June farrow, at reasonable prices. Among the sales recently made were one bull to S. B. McCune, Osseo, Wis.; one cow to Hickey, Beaver Dam, Wis.; one bull to H. Neinas, Ripon, Wis.; three heifers to H. N. Drake & Son, Beaver Dam, Wis.; one bull to August Raatz Cornell, Wis.; one sow to Dan Donovan, Adel, Wis.; one sow to August Middebrant, Fairwater, Wis.; one boar to William Schoenfeld, Beaver Dam, Wis; one sow to Frank Jones, Mineral Point, Wis.; one sow to Wisconsin State Prison, Waupun, Wis.; one boar to H. Kugrath, Watertown, Wis.; one sow to Marcus Whiting, Bruce, Wis., and one sow to H. Fratzke, Fairwater, Wis. Read Mr. Schoenfeld's advertisement on page 23 and write him your needs.—Adv.

Martiny & Son Guernseys.

RILEY MARTINY & SON, Baraboo, Wis., have gained publicity during the past winter by buying some of the best Duroc Jersey sows sold at auction. They now have a fine herd of Durocs, but when talking about this firm do not overlook the fact that their Guernsey herd is in keeping with their Durocs. Just at this time they have two Guernsey bulls of serviceable age for sale. They are well bred and out of good producing dams. Bulls that will suit you. Write and mention this publication.—Adv.

TOO LATE TO CLASSIFY.

MOUND CITY FARM

OFFERS [illegible] sired by Langwater Frenchman [illegible] and Dairymaid's Glenwood Pontiac [illegible] 30 [illegible] average 460 lbs. 20 average 505 lbs. fat. Send for sale list.
CHAS. A. WILKINS Platteville, Wis.

ANDERSON'S BIG-TYPE POLAND CHINAS

AM offering one choice yearling boar that weighs about 425, registered as Big Bone King. Have a choice litter of 13 February pigs which I will pay the express on if ordered before May 1st.
S. ANDERSON ROUTE 8, GREEN BAY, WISCONSIN

GUERNSEY CATTLE.

A DOUBLE-BRED KING OF THE MAY BULL

READY for immediate service. Miriam's King of Ingleside 34140, born April 10, 1915, a well-marked, well-grown Guernsey of good, straight type. His sire and dam were both sired by sons of Imp. King of the May. His dam has an A. R. O. record (class E) of 447.76 lbs. fat. His five nearest dams average 10,812.46 lbs of milk and 580.28 lbs. of fat. Here is an opportunity. Send for extended pedigrees. Several yearling and younger bulls also for sale.

HORSES.

PROPRIETORS OF THE WHITE CITY STOCK FARM.

WE OFFER

TO STALLION MEN who are looking for a good stallion to put on the stand a lot of stallions that will please the most critical. Our two-year-old black and dark gray Percherons weigh now up to 2,100, with the bone and conformation to carry their weight. Our Belgians are big and the right type. We now offer Bizzarrie, our 2,350 five-year-old imported herd header. This horse is the best we ever owned. A great stallion for someone. We now offer ten head of stallions from six to ten years old at sacrifice prices, as we won't carry any aged stallions over. We also offer one five-year-old imported Shire stallion for less money than he could be bought in Europe. Wanted to buy 50 head of big drafty stallions, one coming twos. Write us what you have. Send 25c in stamps for large horse hanger. All horses at big discounts till sold out.

HOLSTEIN BULL CALF FOR SALE

Korndyke Washington Ormsby

His sire is from a 23-lb. junior two-year-old daughter of Sir Pietertje Ormsby Mercedes and a 29.98-lb. dam. His dam is a 13.01-lb. junior two year old whose sire is from a sister to the sire of Ormsby Jane Segis Aaggie, 44.42-46.33 lb.

Look up his sire, Sir Korndyke Fytje Pietertje No. 132719.

I own his dam, Bonnie Ormsby Colantha No. 228930.

As I live in town and have no room for him, he will be sold worth the money.

Box W, Oconomowoc Waukesha County
WISCONSIN

Purebred Registered
HOLSTEIN CATTLE

A Cornell University test proves the value of a purebred Holstein bull in grading up a herd of ordinary cows. A cow three quarters Holstein, in 45 weeks, produced 11,693 pounds of milk containing 413 pounds of butterfat, and another three quarter blood Holstein cow, in 48 weeks, produced 13,574 pounds of milk containing 430 pounds of butterfat. A purebred Holstein bull is one of the most business-like investments a farmer or dairyman can make. There's big money in the big "Black and White" Holsteins.

Send for FREE Illustrated Descriptive Booklet.

The Holstein-Friesian Association of America
F. HOUGHTON, Sec'y, Box 143, Brattleboro, Vt.

DON'T WAIT

UNTIL you are ready to use a bull, but buy a calf and have one when you need him. You can raise him as cheap as we can and you will save on express charges. The one you want may be gone if you wait too long. Write now.

EDGEWOOD FARMS, INC.
Pewaukee Wisconsin

AT LA BELLE VIEW FARM

WE sell Ormsby bull calves by wire before breakfast. If you want one of these youngsters from an A. R. O. dam, sired by our richly-bred Ormsby sire, whose six nearest dams have a 4% test and better, and who is first cousin to Duchess Skylark Ormsby (dairy queen of the world) get busy. Our prices are very reasonable.
EARL E. ROSENKRANS Oconomowoc, Wis.

Walcowis Farms

OFFER grandson of King of the Pontiacs, born July 19, 1916. Sire is a full brother to K. P. Manor Kate, world's yearly record senior two year old. Dam is a 19-lb. granddaughter of De Kol Burke. This calf is a splendid individual, dark in color and tuberculin tested. For further information, address
N. DICKINSON & SON Lake Geneva, Wis.

HILLVALE PAUL ORMSBY

REPRESENTS a rare combination of Ormsby breeding. His sire, Paul Ormsby, is a half-brother of Ormsby Jane Segis Aaggie and his dam, Lady Ormsby 2d, 22.35 lbs., is a half-sister of Duchess Skylark Ormsby and Pietertie Mai l Ormsby. Our herd is on the accredited list. Send for extended pedigree. Address
H. E. Reddelien Oconomowoc, Wisconsin

A 28.70-POUND HOLSTEIN BULL

WHOSE 2 nearest dams average 32.07 lbs. butter in 7 days. His sire is out of the 35.43-lb cow, Pontiac De Nylander. His dam has a record of 28.70 and has a 24.61 lb. 4-year-old daughter. He is 7-8 white, well grown and of exceptionally good conformation. Send for his extended pedigree. Address
A. M. Anderson Whitewater, Wis.

23-POUND HOLSTEIN BULL

BORN March 14, 1916. His dam is a 23-pound daughter of the noted "but tter fat" sire, Sir Clyde. Her test is 4.23% fat. His sire is a 25-pound son of the 32-pound bull, Beauty Pietertje Prince, and whose dam is the do uble bred Ormsby cow, Queen Ormsby Duchess. Send for pedigree and price. Address
Dopp Brothers Ixonia, Wisconsin

RUST BROS.

OFFER the richly bred Holstein bull, Sir Isa Lotta Hengerveld 188663, born Aug. 18, 1915. Ready for service. His dam, Ida Lotta Hengerveld, at 3½ years made 21.34 lbs. of butter in 7 days, 31 days after calving. She is from a long line of heavy producing ancestors, records of her three nearest dams averaging 27.20 lbs. butter in 7 days. She has inherited this heavy producing ability, and transmits it. Sire of bull for sale is Daisy Johanna 5th, 1st prize two year old at Wisconsin State Fair, 1915. His dam has two A.R.O.daughters. Arthur Rust, West Allis, Wis.

Registered Holstein Heifers

HEIFER calves and young cows for sale. Ten daughters of the 24.12-pound bull, Sir Korndyke Zoldusky De Kol, that has 10 A.R.O. daughters. He is a grandson of Hengerveld De Kol, that has 116 A. R. O. daughters. These heifers are bred to the 40-pound bull, Johanna King Segis, a son of the 40-pound cow, Johanna De Kol Van Beers. Yearling bulls and younger from A. R. O. dams with records from 14 to 30 pounds. High-grade springers and young cows. Write us your wants.
H. F. McNutt Oxford, Wisconsin

HOLSTEIN CALVES

WE offer for sale choice, beautifully marked, 15-16 pure-bred heifer or male calves 1 to 2 weeks old, out of heavy-milking dams, $15 each, crated f. o. b. cars. First check takes them. Write

Lawrence Robers Lyons, Wis

26.64-lb. Holstein Bull

TEN months old, sired by Sir Parthenea Champion and from the 26.64-lb. 3-year-old heifer, Parthenea Jolie Clothilde De Kol. Four other young bulls from A. R. O. and untested cows, 7 to 10 months old. We also offer for sale our senior herd sir e, 8 registered and yearling heifers and bull and heifer calves. We produced 16 A. R .O. cows last year, several from 20 to 28 pounds. Come and visit our herd and see the sire and dams of these anim als.
ADAM LORENZ SHEBOYGAN FALLS, WISCONSIN

HEAD YOUR HERD WITH A WINNER

GET INDIVIDUALITY WITH BREEDING. Would you like to head your herd with a brother to the junior champion Holstein bull at the Minnesota State Fair, 1916, or the junior champion bull at the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of that blood that won for us the Premier Breedership at the Southwestern Dairy Show and the Waterloo Dairy Cattle Congress, 1916? DO YOU want some of the blood that enabled us to win the Wisconsin Farm Management Contest, 1915? DO YOU want to breed individuality and production into your herd? If so, NOW is your chance. We offer some 20 choice young bulls from 1 to 15 months old bred in these lines. They are sired by our senior herd sire, Bairdland Segis Sir Prize, and out of daughters of Sir Urmagel Burke, a 31-lb. bull, with a 35-lb. sister. These daughters are making from 18 to 25 lbs. as 3 and 4 year olds. WHAT would one of these youngsters be worth to you? Write us your wants or come and see them. Herd tuberculin tested. Each animal guaranteed to be a breeder.
BAIRD BROS. - - - - WAUKESHA, WISCONSIN

150 HEAD PURE-BRED HOLSTEINS Come and see the good things we have been telling you about. Catalogs now ready.

S. H. BIRD, Sale Manager, SOUTH BYRON, WISCONSIN

15th Semi-Annual Consignment Sale

LAKE MILLS, WIS., MAY 8 and 9

THIS sale company, known from coast to coast as one of the oldest and most reliable organizations of its kind, has taken great pains in selecting the cattle for this spring's sale. They offer 175 head of healthy, desirable Holsteins from first-class breeders' herds. Watch further announcements. Auctioneers, Haeger, Kelley, Mack. S. T. Wood in the box. Write for catalog to

F. H. EVERSON, Mgr. LAKE MILLS, WIS.

HEREFORD CATTLE.

WALTER BROS.' HEREFORDS

ONE two year old. **Bulls for sale.** Two senior yearlings, sired by **Beau Gomez 2d,** he by the noted $4,000 **Beau Gomez.** Outstanding bulls at reasonable figure.
WALTER BROS. CHIPPEWA FALLS, WIS.

SHORT-HORN CATTLE.

ROCK COUNTY SHORT-HORNS

FIFTY registered herds in the county. Milking Short-horns— Scotch or Scotch-topped. You can find what you want in Rock county. Write
J. E. Kennedy, Sec'y, Rock County Short-horn Breeders' Ass'n, Janesville, Wisconsin

OAK LAWN SHORT-HORNS

SCOTCH CATTLE of the most fashionable breeding. Some young bulls for sale. I invite inspection. Address
J. E. KENNEDY JANESVILLE, WISCONSIN

AYRSHIRE CATTLE.

REGISTERED

AYRSHIRES

OF all ages for sale. Pedigrees and prices gladly given upon request.
STEPHEN BULL RACINE, WISCONSIN

CHESTER WHITE SWINE.

CHESTER WHITE

FALL BOARS of different ages, from September to November farrow, sired by Ignatz, the junior champion of Minnesota, 1915, and Calloway's Kind, first at Minnesota in the senior yearling class and grand champion at La Crosse, Wis., for sale. Also booking orders for spring pigs of March and April farrow to be shipped at three months old. Address
H. A. DERENTHAL, Manager, EAST SIDE STOCK FARM, WYKOFF, MINN.

Gray's Chester Whites

PIGS will be shipped at weaning time. Sire, Paddy by Schoolmaster. Get your order in early.
A. L. GRAY Mt. Hope, Wis.

RAINY DAY

BY Callaway's Favorite, one of the good Chester White boars of the state. Booking orders now.
WALTER GEORGE EVANSVILLE, WIS.

1-2 TON I. C. S. AND CHESTER WHITES

WE are sold out at present but we are booking orders for spring pigs. These will be sired by Schoolmaster, the greatest boar of the breed, undefeated grand champion for 1916; Crandell-wonder, grand champion Ohio State Fair; Callaway Edd, grand champion Mo. State Fair, School Boy, grand champion at Wisconsin State Fair and Chicago fat stock show, and Abo 2d. We have 100 sows due March and April. Get our big catalog. We ship on approval. Reg. free. Harry T. Crandell & Son, R. 1, Cass City, Mich.

CHESTERS

NOTHING for sale at present. Booking orders for spring pigs to be shipped at 3 months. Sired by Pay Streak. Write
Wm. T. Butts Evansville, Wis.

HAMPSHIRE SWINE.

HAMPSHIRES

OR "Belted" swine, have 40 March farrowed spring pigs for May 1st delivery, males and females unrelated.
Dane Stock Farm Oshkosh, Wis.

Adolph Nuttleman

BREEDER of Chester Whites. Let me know your wants.
WEST SALEM WISCONSIN

Please mention this paper when writing

GREEN VIEW STOCK FARM SHORTHORNS

OF serviceable age. Not a poor one offered. Guaranteed breeders. Address
John H. Bear & Son Spring Green, Wis.

SHORT-HORNS

OF either sex, sired by or bred to PRIZE-WINNING SCOTCH BULLS. Our cows have SIZE and are great milkers. A large herd. Write
W. J. Bernd New Richmond, Wis.

HILLSHADE FARM SHORT-HORNS

IF you are looking for good cattle at prices that are right we can suit you. Address Eben E. Jones, Rockland, La Crosse county, Wisconsin.

SHORT-HORNS

BULLS, cows and heifers. Bred for beef and milk. Herd headed by one of the best grandsons of Whitehall Sultan. Address
H. B. Drake & Son, Beaver Dam, Wisconsin

THREE SHORT-HORN BULLS

FOR sale—10, 11 and 13 months old. Sired by a son of White Sultan and from good milking dams. A. J. Wheeler, R. 1, Beaver Dam, Wis.

GOOD VIEW STOCK FARM

SHORT-HORN BULLS—Two ready for service. From good milking dams.
J. M. SWEENEY & SONS, Edgerton, Wis.

SHORT-HORN BULLS

Red, white and roans. For particulars address
R. A. Morley Co. Baraboo, Wisconsin

REGISTERED Short-horn bulls of serviceable age, also some pure-bred calves, for sale. Prices right. Address John Fitzgerald, Grimms, Wisconsin.

SHORT-HORNS Both sexes and good individuals. Address Williams Bros., Bangor Wisconsin.

WE have some young Short-horn bulls sired by Senator Clay 5th for sale. Out of good milking strains. O. C. Olson, Strum, Wisconsin.

LITTLE SHORT-HORNS

FEW CHOICE BULLS of serviceable age, and it so happens that they are out of the best cows in our herds. We satisfy our customers. Write
HARVEY H. LITTLE EVANSVILLE, WIS.

Bates Milking Short-horns

YOUNG bulls from heavy milking dams and backed by generations of **heavy-milking --high testing cows.** They combine **Clay Buttercup** and **Wildeyes** breeding, the two best Bates families. Prices reasonable.
Geo. Wenham & Sons, Ft. Atkinson, Wis.

Good Short-horns

FOR SALE. 20 choice bulls and heifers. Prices reasonable. Standard Scotch breeding and of the right type and quality. Richard Maurer & Son, Fox Lake, Wisconsin.

KITTY CLAY HERD HORNLESS SHORT-HORNS AND SHORT-HORNS

YOUNG bulls and heifers sired by Kitty Clay's Duke, that is out of the best family of milking Short-horns in existence. Also several Buff Wyandotte cockerels. Address
J. Warren Hoyt Rosendale, Wis.

Short-horn Heifers

YEARLINGS and over. A few young bulls. I'll try to please you. Write.
P. N. COLLINS RIVER FALLS, WIS.
(35 miles southeast of St. Paul)

THE GREAT WORLD'S FAIR HERDS

40 Short-horn bulls and heifers sired by Village Mystic. 100 big-boned Poland China boars and sows sired by Big Bone and Long Wonder. Call at Prairie Lawn Stock Farm or write C. J. Schoenfeld & Son, Fox Lake, Wis.

Bates SHORT-HORNS

OFFERING choice bulls old enough for service sired by 17th Duke of Wapsie. Herd established 40 years. Correspondence invited.
B. W. Little Janesville, Wis.

SHORT-HORN bulls for sale from 9 to 14 months of age. J. D. Beetham, Lancaster, Wisconsin.

$1150 F. o. b Racine
Mitchell Junior—a 40-h. p. Six
120-inch Wheelbase

Mitchell SIXES

$1460 F. o. b. Racine
7-Passenger—48 Horsepower
127-inch Wheelbase

One Type—In Two Sizes

Built Like No Other Car

This model plant—covering 45 acres—was built and equipped for this single type.

It is designed to build this one type at a cost which none can match. John W. Bate, the great efficiency expert, has spent millions of dollars to do that.

The savings go into extras. So the Mitchell has a wealth of features which other cars omit.

All Mitchell cars are designed by our artists, and built by our own craftsmen. So each style is exclusive.

A Distinctive Car

Mr. Bate has worked 14 years to perfect this factory and this car. Every building, machine and method shows the last word in efficiency.

His methods save us on this year's output about $4,000,000. And all that goes into Mitchell extra values.

Our latest models are the result of more than 700 improvements made by Mr. Bate. He spent a year in Europe to get some of the ideas.

So the Mitchell offers, in many ways, what you cannot find elsewhere.

Unique Features

The latest Mitchells embody these distinct attractions:

31 Extra Features—
24 Per Cent Added Luxury—
100 Per Cent Over-Strength.

There are 31 features, most of which all other cars omit. Each is something you will want. Go see them. These are paid for by our factory savings.

On this year's models we add 24 per cent to the cost of finish, upholstery and trimming. Our new body plant saves the money to do that. This makes the Mitchell the luxury car of its class.

In the past three years we have doubled our margins of safety. Now each important part shows 100 per cent over-strength.

TWO SIZES

Mitchell—a roomy, 7-passenger Six, with 127-inch wheelbase and a highly-developed 48-horsepower motor.

Price $1460, f. o. b. Racine

Mitchell Junior—a 5-passenger Six on similar lines with 120-inch wheelbase and a 40-horsepower motor—¼-inch smaller bore.

Price $1150, f. o. b. Racine

Also six styles of enclosed and convertible bodies. Also new Club Roadster.

To Double Car Life

The object of this new standard is to double car life. Over 440 parts are built of toughened steel. Safety parts are all oversize. Parts which get a major strain are built of Chrome-Vanadium.

Our engine test is 10,000 miles without wear. Our gear test is 50,000 pounds per tooth. Our spring test calls for limitless service. Not one Bate cantilever spring has broken in the two years we have used them.

One Size, $1150

Mitchell Junior is about like the Mitchell, but a slightly smaller car. Still it has a 120-inch wheelbase. It is the marvel of Motordom this year in the value that it gives. See which size you like best.

You will want these extras. And, when you know, you will want a Bate-built car. It means a complete car, a smart car and a lifetime car. It is the last word in efficiency. Let your dealer show it to you before the spring over-demand.

VOL. XLVI. NO. 17. THURSDAY, APRIL 26, 1917. WHOLE NO. 1839

Barron County Potato Work.

PREVIOUS to 1915, Barron county was not especially known for its potatoes. Potatoes were grown there as they are in many other counties today, with little or no attention being paid to quality. Since that time, however, the county has made some mighty steps forward. The progress that has been made is the result of proper organization and intelligent direction of this work. Twenty potato growers' associations were formed in 1915, with a total membership of 750. With the coming of these associations came an understanding of how the best results could be obtained from the efforts toward improvement and standardization. Each association decided upon the variety which was to be grown and thereby eliminated one of the chief difficulties of any potato-growing district. It is not only necessary that land will grow a big crop, but it is essential that the crop be uniform as to variety when marketed. As many as seven varieties could formerly be found in one field of potatoes. Now each field represents a particular variety, with no distant relations of that variety showing up in a row every so often. A big financial result of this organizing was noticeable during 1916, when $1,500 premium over the market price was received for Barron county potatoes on one shipment.

Though the associations are all very young, results at the shows have been highly satisfactory. Individual members showing at the Eau Claire State Show, in 1916, took quite a few prizes for Barron county. On Rural New Yorkers, first, second, third, eleventh and twelfth places went to members on individual exhibits, as did also first prize on Green Mountains, and first, fourth and fifth prizes on Burbanks. The county received second prize on the booth exhibit.

The associations were not formed, however, with an idea of merely standardizing the varieties grown. The work reaches farther than that. During the regular meetings of each association cultural methods of the crop are discussed by members or outside authorities, with the result that better methods in the field are now being followed. Some excellent results have been obtained with spraying under the direction of R. J. Cuff, the county agent. He has been behind the organization work in Barron county, and much credit is due him for the success of the work. His first effort toward saving the crop in the field by timely spraying, however, met with the usual rebuff from individual members. In one instance he visited the farm of a member and noticed that fifteen acres of the forty in the patch were "black as pitch" from blight. He offered to spray the balance of the crop for the owner, but received a kindly reply that it was deemed unnecessary. Blight had never, according to this member, spread from row to row, and he thought that that would be the total of his loss for the season. However, the next day the county agent received a telephone message to the effect that the little black spots were showing on the other rows and perhaps spraying would do some good anyway. Mr. Cuff immediately went to this man's farm and sprayed the rest of the field the same day. The little formula of five pounds of copper sulphate, five pounds of quicklime and fifty gallons of water saved that man $500 worth of potatoes. The loss from the remaining acres that had not been blighted was small, though they were attacked, while the first fifteen acres produced no potatoes at all. Quite naturally this convert is one of the strongest advocates of spraying in Barron county today.

WHAT THE BUGS DID IN TWO DAYS.

The biggest results in spraying have been obtained with Bordeaux mixture to prevent tip burn and sun scald. On the farm of Mr. Benson, at Barronett, $10 worth of spraying resulted in a profit of $300 worth of extra potatoes. Carl Hazelberg, at Barron, sprayed his fields of Burbanks and averaged eighty-eight bushels to the acre, while the unsprayed check portion yielded only twenty-five bushels to the acre. On another lot of Green Mountains 100 bushels were harvested to the acre where spraying took place and only fifty-seven bushels where no spraying was used. On a field of Rurals which was sprayed the yield was 156 bushels to the acre, while the unsprayed acre yielded only sixty-seven and one-half bushels.

The cost of spraying is approximately $5 an acre. On two fields the highest priced sprayer that could be bought on the market was used, and it was found that on a field of thirteen acres each acre made enough profit from the spraying to buy two machines of the kind used for the field. That would almost prove the wisdom of making an investment of this sort. The work of improving the quality of Barron county potatoes is given principal consideration. Mr. Cuff, however, has not made the mistake of advising all reforms in one year. The first year it was standardizing the varieties, the second better cultural methods, and this year it is to be better seed selection and treatment of seed for disease. Black scurf has made considerable inroads on the seed crop not only in Barron county, but all over Wisconsin. To combat it effectively, Barron county growers this year will use the corrosive subli-

COMMON POTATO SCAB.

POTATO PLANTER.

MOLINE-DUTCH UNCLE
RIDING CULTIVATOR

Hammock seat, steel tube frame, perfect balance under all conditions, and other features make this an exceptionally easy riding and light working cultivator.

Gangs suspended from swivel masts are raised, lowered and guided by foot pressure. Hand holds assist in dodging crooked rows.

May be tilted in or out for work on ridges or in trenches.

Shovels adjustable for wide or narrow cultivation.

Narrow Wheel Adjustment

makes the Dutch Uncle useful in close planted crops—adjustable any width, 39 to 57 inches.

Driver has an unobstructed view of the work at all times.

Built entirely of steel and malleable iron—Strong, light, simple, durable.

Ask your Moline dealer about the Dutch Uncle, or write us for illustrated literature.

Moline Plow Co., Moline, Ill. Dept. 30

THE MOLINE LINE INCLUDES

Corn Planters, Cotton Planters, Cultivators, Corn Binders, Grain Binders, Grain Drills, Harrows, Hay Loaders, Hay Rakes, Lime Sowers, Listers, Manure Spreaders, Mowers, Plows (chilled and steel), Reapers, Scales, Seeders, Stalk Cutters, Tractors, Farm Trucks, Vehicles, Wagons.

FARM MECHANICS

Auto, Farm Engine and Farm Machinery Ailments diagnosed and remedies suggested in this department

Conservation of Farm Machinery.

War has come and with it new conditions for the farmer to meet. Within the next year millions of men who have been engaged in productive labor will cease to produce. Labor is already scarce and the places left vacant by the men going to the front cannot be filled by other men, as there are no surplus men to be had. Machinery and more efficient methods of labor must make up the deficiency. It must more than make up the deficiency, as the rest of the world is demanding more of us than ever.

We wish to impress upon our readers the necessity of properly caring for every farm implement and using it to the best advantage during the coming year. A cultivator rusting out in some fence corner is one item being detracted from the country's resources. While it may not pay to build expensive sheds to store idle machinery, every effort should be made to use the buildings at hand for protecting it. It is not a question of saving so many dollars and cents; it is a question of releasing the shops from the burden of making machinery needlessly when their efforts should be directed to other lines. The shops will have a difficult time of it at the best. Many mechanics will have joined the army, and steel will be hard to get, due to a shortage of the supply and the congested condition of the railroads. The farmer protecting his machinery is adding to the defenses of his country.

Needless to add, the most should be made of power farming. The gas engine and tractor should be used to the limit, as they are great savers of human labor and the labor of horses. France and England are encouraging the use of tractors as one means of increasing their food production.

Questions and Answers.

Repairs For Wilson Engine.

I would like to know where I can get repairs for the Wilson gas engine. It has been manufactured in Des Moines by the Gibbons Machine and Foundry Co., successors to the Wilson Machine Co.

Answer.—We doubt that you can obtain repairs for this engine unless you can obtain them from the Gibbons Co. It might be possible for you to get repair parts made at some local machine shop or garage.

Increasing Output of Generator.

We have a 1916 Reo Four auto. The generator, Model 241, is set to deliver ten amperes at twenty-five miles per hour. As we run but twelve to eighteen miles per hour, the battery is always going down. We do not want to send the car to the service station, as we are mechanics; we wish to learn how to adjust it ourselves.

Answer.—If we understand your outfit correctly it would be necessary for you to speed up the generator, making it run about one-half faster. To do this, increase the size of the sprocket on the engine or decrease the size of sprocket on the generator, or do both.

Poor Gasoline.

I have a Studebaker Six, 1914 model, that lets the gasoline through into the oil. The motor is not worn at all, and the piston rings seem to be good. They will hold the piston in place in the cylinder when it is loose from the bearing below. I tried all the pistons carefully; looking them over to see if there were any cracks. The inside walls of the cylinders are all smooth. After running a while, the oil becomes as thin as gasoline. You can see through it in a bottle. I believe that I could burn it in the engine for gasoline. The car has been doing this for a long time. It has been run about 8,000 miles. My garage man is a very good mechanic, but he does not seem to know what to do. What is the cause of the trouble? Are "Leak-Proof" piston rings any better than the common kind?

Answer.—The ordinary gasoline on the market at present contains a large amount of kerosene, which does not burn well in the older types of motors. The later automobile motors have the intake pipes run along by the side of the exhaust pipe so as to slightly heat the intake gases just before they enter the cylinder. This prevents condensation of the fuel spray and the trouble you are having does not then occur. Doubtless you would find it a great aid to connect a hot air attachment to your carburetor. A sheet iron jacket is fastened around the exhaust pipe. A flexible metal hose is run from the air inlet of the carburetor to this jacket, so that the air must pass around the exhaust pipe on its way to the carburetor. Your garage man can probably supply you with this outfit. We consider "Leak Proof" rings much superior to the common split ring.

Motorcycle Will Not Start.

Please tell me what is the matter with my motorcycle. I have put new piston rings in the cylinder and I cannot get it to run. I can't get it started; it just puffs and smokes. Can I make a car out of my motorcycle?

Answer.—There is often some trouble in starting a motor with new rings, as the rings may not fit the cylinder walls correctly. After the motor has been run awhile the force of the explosion forces the rings out against the walls and they lap in to a smooth surface, after which there should be no starting trouble. At the factory engines are usually run by a belt from another engine for several hours to lap in the rings before the engine is run on its own power. Be sure that you put the timing gears together in the correct position. See that the prick punch marks on the gear teeth come together, otherwise the timing will not be right. If your trouble is due to the new rings persistent cranking will start the motor.

It would be a difficult job to change your motorcycle to a car.

Some Carburetor Questions.

How large should a carburetor be for a twenty-five-horse-power motor? Does the Stromberg "G. No. 2" carburetor give good results? Would you recommend a Kingston dash adjusting carburetor for a Paige twenty-five-horse-power motor? For this motor, would a Schebler give better results than either of the above? How is a Stromberg No. 2 carburetor adjusted? Is there any danger from fire if the gasoline feed tube gets hot from the exhaust pipe, or if the carburetor overflows? What grade of oil is best for automobile transmissions?

Answer.—A twenty-five horse power motor requires an inch and a quarter carburetor. The Stromberg G No. 2 carburetor gives good results when in good condition and properly adjusted. The Schebler and Kingston are also good carburetors. We would not feel justified in recommending one in preference to the others. To adjust the G No. 2 Stromberg carburetor, proceed as follows: With the motor at rest, screw down the little nut on top of the air valve so that the spring on top of the air valve is perfectly free—so that it has about one-sixteenth of an inch end play. Adjust the nut below the air valve so that the air valve seats lightly. Start the motor, closing the choke valve in the horn at the bottom of the carburetor if necessary. Run the motor until it is thoroughly warmed up. Then screw the nut below the air valve up and down until the position is found where the motor runs smoothly at low speed, the spark being retarded. Then advance the spark to running position and open the throttle gradually. If the motor then backfires through the carburetor, screw the nut on top of the air valve up, so as to put more tension on the spring. Back firing results from a lean mixture and black, sooty exhaust from a rich mixture. Turning either adjusting nut up makes the mixture richer.

Many automobile fires result from the carburetor overflowing. The gasoline pipe is not likely to become hot enough to cause trouble. If it became hot enough to vaporize the gasoline the carburetor would not work properly. A heavy, sticky grease is best for automobile transmissions, especially if the gears are noisy. Yellow transmission grease is a fair lubricant in the summertime.

Saves 2 Horses
On the Binder
Weighs Only 167 Lbs.

Cushman Binder Engine

For All Farm Work

The 4 H. P. Cushman is the **original and successful** Binder Engine. Thousands are in use every harvest—saving horseflesh and saving grain.

It saves a team, because engine operates sickle and all machinery of binder, leaving horses nothing to do but pull binder out of gear; also takes away side draft. Therefore, two horses easily handle 8-foot binder in heavy grain.

It saves the grain, because it runs at uniform, steady speed, putting grain on platform evenly, allowing platform and elevator canvas to deliver it to packers straight, and thus it is tied without loss, saving a large per cent of the natural waste of binder.

It saves the crop in a wet season, because slipping of bull wheel or slowing up of team does not stop the sickle, and it never clogs. You can cut wet grain same as dry.

It saves time because you can move right along all the time in heavy grain without killing the horses, and with no choking of sickle, elevators or packers.

It saves the binder, because it operates at same regular speed all the time—no jerking of machinery by quick stopping and starting of team or when bull wheel drops into a rut. That's what tears a binder to pieces. With a Cushman Engine your binder will last twice as long. Write for book with complete description.

The Wisconsin Farmer

THURSDAY, APRIL 26, 1917.

FAMILY CIRCLE TALKS
BY THE PUBLISHER

BADGER FARM SCHOOL ON THE JOB.

A VERY large part of my mail these days refers to the efforts of our national and state governments to enlist the farmers of this country in behalf of greater food production. In this connection, I am delighted to note the efficiency with which our Wisconsin College of Agriculture, through its allied organizations, is able to handle such a proposition as this. No sooner had the president urged the need of bigger crops than the Wisconsin College of Agriculture was out with a series of special bulletins and posters, giving some practical hints of what can be done, even at this late day in the season, to increase the production of foodstuffs in this state.

In emergencies our institutions, such as the Wisconsin College of Agriculture, should bend every energy toward relief, and I believe that is the real aim and purpose of those at the head of our great school. Last week The Wisconsin Farmer called attention to the emergency call from the Wisconsin Experiment Station to the farmers of this state to sow more spring wheat. The same sort of advice has been given concerning corn, and we have been urged to produce more heavily, if possible, of all our staple foodstuffs. My latest mail brings me a letter from the Wisconsin station on the subject of poultry and I ask all Wisconsin folks to read the following extracts from this urgent message:

Raise more chickens—it pays and it's patriotic. But the big waste in poultry comes through losses after the chickens are hatched. It's a crime against the nation's meat supply to let a chick die that has already consumed a part of the farmer's feed and used up some of the farm energy. Save your chicks.

Right now, buy a can of insect powder—be sure it's fresh—and some vaseline. Have you any coal-tar disinfectant? And how about a good egg crate so you can market your eggs without waste? Unless you have a supply of buttermilk or sour milk, stop and get a sack of meat scrap.

Tonight let the boys do your chores while you grease the heads of the baby chicks, and dust the setting hens with that insect powder. Then tomorrow, clean the coop and paint the roosts with kerosene or coal-tar disinfectant. That will kill the mites.

Why not market or eat the poor laying hens and all but a few roosters? You can tell your poor layers. They molt in the summer (good ones molt in the fall). They sit on the roost late in the morning and early at night. Feel their crops at night—good layers are good feeders. Sell all small, long-headed, late-hatched pullets.

Feed some buttermilk, sour milk, or meat scraps. Give them free range—but fence in the garden. Feed regularly a variety of good, clean feed. Keep a dry mash before the hens at all times. Use two pounds of ground feed, one pound bran, one pound middlings and one pound of meat scrap if milk is not available. Provide plenty of house room for the growing chicks. Sell or shut up all roosters after May 15th. The rooster makes eggs fertile—fertile eggs spoil.

Have the boys provide a clean, well-littered nest for every five hens. That will prevent dirty and broken eggs. Have them gather the eggs twice daily, and pack them in that egg crate in a cool, dry cellar or milk room. Market them at least once a week. Don't let the sun hit them on the way to market.

Of course this means extra work, but eggs and poultry are going to be high.

I believe that in no place in the country have the experiment workers reduced their work to a more practical basis than right here in Wisconsin. The extract above is submitted as evidence of this statement.

THE HEART OF THE FARM.

SOME of the letters which come to me from subscribers are so full of what is known as heart interest they are wonderful human documents. With unstudied, even unconscious eloquence, the writers reveal their souls in letters which are marvels of simple construction. Such a letter is the one I received recently from Mr. Ernest Schaal, of Oconto county, Wisconsin. I wish that I might print it in its entirety, but that is impossible, for Mr. Schaal wrote me at great length. But I am going to devote more than the usual amount of space to this letter, printing the major portion of it at least.

Mr. Schaal was kind enough to preface his letter with praise of my humble efforts to instruct and edify my readers in this page of mine, saying:

Dear Mr. Pierce: I have read your talks with much pleasure and now I see that you had to struggle for an existence, in your young days, like many others of us. I like to hear of people who had to struggle and who came out at the top. It shows there is something to them. I think I would enjoy talking with you, as you are interested in young people, as I am, and want to help anyone that will try to help himself, and they are the only ones you can help.

Mr. Schaal has certainly caught the spirit of my writings, for they are intended to be helpful to those who need help, encouraging to those whose courage is failing, uplifting to those who may have started on the downward path. It pleases me, indeed, that at least one of my readers should grasp so splendidly the motives which actuate me to continue this page of mine week after week.

But Mr. Schaal had something far more important to say than mere praise of my humble efforts. He went on to tell the story of his own early struggles, a story which I do not believe has been surpassed, for inspiration and cheer, by anything which has come to me in many months. Let me print a part of his letter herewith:

I will give you a sketch of my life and if it sounds too much like a fairy tale don't print it. I was born in Germany, in 1848, and came to America in 1849, the youngest of eleven children, landed in Mayville, Wisconsin, and inside of four years father and mother both died and the children were scattered. At first I was put with a stranger, but later some of my big sisters got married and I lived with them in Addison, Wisconsin, in a log distillery where they made rye whiskey. Two brothers-in-law owned it. There I learned the multiplication tables marked with white chalk on the rectifying tube with a faucet at the bottom with a glass set under it, so I learned two things at once. The former I remembered. I went to the district school some there. From there we moved to Iron Ridge, into a log cabin, and kept a grocery store and bar. I tended both and went to school some.

Shortly before the war I moved with another brother-in-law to Oakfield, Wisconsin. He soon went to the war and I worked for farmers around there when, in my fifteenth year, I joined the Sons of Temperance, to take the total abstinence pledge, and I always kept it. About that time, while working for a farmer, I resolved that when I got to be a man I would be a farmer; I would be a Christian and marry a Christian wife and have a large family, and when Sunday came I would hitch up my nice team and rig and we would all go to church, although I had never been to church or Sunday school then. The winter after I was seventeen my brother came to Oakfield from northern Wisconsin, Oconto county, and took me out of school to take his place up here, so he could go to the war the last year. He was taking care of a small farm and a war widow and family. I got $18 per month. In the fall he came back. I took my $118 and went back to Oakfield and stopped off at Fond du Lac and bought a government bond for $100 and the next year I came back to northern Wisconsin permanently; worked in the woods for the same man and others lumbering, and in the summer farming. When I was about twenty I bought 120 acres of land from R. Gillett and worked it out at $1 per day. About that time the country had settled up, so that we had preaching in the little red schoolhouse. I went and was converted. Then I decided "here I will live and die, let it be long or short," and I began to clear my farm. I boarded with my brother some and finally went into an old lumber camp and kept old bach two or three years.

About this time I began looking for the Christian wife and found her, and in the fall of '71 we were married and moved into my new block house. She had never kept house before, but she was happy and so was I. We set up our family altar the first morning and never have let anything sidetrack us from our religious duties. I never considered myself very smart, but was just foolish enough to have great faith in God and his word and believed that in the keeping of his commandments there was a great reward.

I never was very crazy to pile up money. Home, family, and good citizenship I considered worth more. In seventy-two our first boy came. We lived three miles from church and had only oxen then, and were very thankful for them. We used to go a-foot or with the oxen, but we always went and we enjoyed life big. About that time we built the first church in Gillett. Our boys and girls kept coming about every two years, until nine boys and two girls had come. Eight boys and one girl are still alive.

Is not that a splendid record, an inspiring letter? Here we have a man overcoming obstacles, resisting temptation, giving himself to God in his early days, hewing close to the line throughout a long life and rearing a family which shall keep his memory sweet for many years to come. I will admit, my friends, it brought the tears to my eyes to read Mr. Schaal's concluding words:

You will notice that I emphasize the spiritual part of my life, for it is the secret of what success I have had. I have enjoyed life big. I live in the best of neighborhoods. I love my neighbors and they love me, and my children are all good to me, and I feel that God has accepted my good deeds and he for Christ's sake has forgiven my bad deeds and I am still looking for good things.

Can any one read such a letter as this and then wonder how it has come that farming has been brought to such a high plane in one man's lifetime, how living standards on the farm have been so elevated, and how the farm has given to the world its greatest men and its greatest ideas? Such men are national heroes, although they die unknown. Such men are the greatest asset of our nation, though they possess little of this world's goods. I honor such a man far above those who sit in the seats of the mighty and govern empires by the nod of their heads.

It is such letters as this that I most delight to receive. You farmers who have succeeded, have you not some message to give the coming generation? If so, write to me and I will pass it along, as I do Mr. Schaal's this week. There is so much for us who are old to say to those who are young and time is flying by so rapidly. Shall we speak before it is too late?

EDUCATION AND THE FARMER

I AM not one of those who believe a college education absolutely essential to success in any line, be it farming or anything else. I am a firm believer in getting the best education possible. I believe that the more brains we mix with the seed we drop into the ground of our Wisconsin farms the better. But I cannot forget that some of the best farmers I know never went beyond the eighth grade in an ordinary one-room country school, and some of them did not even get that much schooling.

I am led to make these remarks by the publication of the results of an investigation conducted in one of our eastern states, purporting to show that success in farming increases proportionate to the college training of the farmer. Let me quote the item (from Leslie's Weekly) which caused me to write this article:

There is nothing alarming in the statement that one-third of the farmers of New York state fare so badly that they would be better off if they would lend the money they have invested in farms and hire out as laborers. This is a lower average of failure than prevails in most other callings. Mr. Hurley, when chairman of the federal trade commission, was authority for the statement that at least one-half of business ventures are failures. It is a case of efficiency, of the survival of the fittest, whether in business or farming. The Wicks committee, which has been investigating conditions among the farmers of New York to be used as a basis for legislation to benefit farmers and consumers, bears out this point. The farmer who has a high school education makes twice as much as the farmer who has not, and the college graduate on the farm makes three times as much as the farmer who has neither high school nor college training. The educated farmer is the one who is making money, just as superior intelligence brings increased success in every other line of work.

The writer of this item fell into one error, one of omission rather than of commission. Education is not always, or merely, a matter of schooling. Much more often it is a matter of observation, of personal experience, of keeping one's eyes and ears open and building on the mistakes of ourselves and of others. Admitting that this is education, rather than the obtaining of a sheepskin from some school or college, I am willing to assert that success in farming, as in everything else, depends absolutely upon it.

The mistake all too many people make is in assuming that education is to be obtained only within four walls, from the lips of a teacher or the printed words of a textbook. There is a bigger, broader education, which I am sometimes inclined to think is far more important. It is the education which we obtain first-hand, through experience and observation, which supplements and continues the education received in school, if we are so fortunate as to receive that kind, and often supplants the school education altogether. For instance, I believe there is an education, second to none, to be secured by reading a practical, dependable farm paper, edited by practical farmers and full of sound, reliable advice and information, supplementing this by attending farmers' institutes, short courses, neighborhood clubs and exchanging farming ideas with friends, neighbors and fellow farmers generally. Do some unusual conditions exist in a certain locality, they are to be contended with and overcome by an exchange of ideas by the farmers living there. This exchange of ideas constitutes education, just as much as college class work. We can secure a good education reading the daily newspapers, the weekly and monthly magazines, the state and national agricultural bulletins and standard books, such as those which I have listed in this page in recent weeks. Education is obtainable in so many ways, even by studying the stars at night as one walks through the country, or observing the habits of field mice and all manner of living things, that I would hesitate to say just what it is, how it is best to be obtained, who has it, or does not have it. Perhaps we might say, generally, that a good education is anything which we know and which we

(Concluded on page 5.)

THE WISCONSIN FARMER

A WEEKLY JOURNAL OF AGRICULTURE, HORTICULTURE, STOCK RAISING AND ALLIED INDUSTRIES

BY JAMES M. PIERCE

JAMES ATKINSON, Editor-in-Chief

ESTABLISHED IN 1848

Entered at Des Moines Postoffice as second-class matter

PUBLISHED EVERY THURSDAY

1912 Grand Avenue Des Moines, Iowa — 201 Washington Bldg. Madison, Wis.

To either of which communications relating to subscriptions or advertising may be addressed.

Member Agricultural Publishers' Association. Member Audit Bureau of Circulations.

SUBSCRIPTION RATES—Single subscription, $1.00 a year. In clubs of ten, 75 cents a year and an extra copy to getter up of club. In clubs of 100 or more, 25 cents a year. Single subscription three years in advance, $1.50; five years in advance, $2.50; ten years in advance, $5.00. Subscription price in Canada $1.50 a year. Remit by draft, registered letter, postoffice or express money order. In changing address, send both the old and new addresses. In renewing, give the same name and initials as before or state both the old and new names and explain why you change. In case of errors or failure to receive the paper within two weeks, promptly notify the publisher. Address

The Wisconsin Farmer Madison, Wis.

Wisconsin Legislative Happenings.

With the present session drawing rapidly to a close both houses are working overtime in order to dispose of the hundreds of bills before them. Many of the bills have been in the committee for the better part of the session and are now just coming to light again. The time for introducing bills through individuals is now past and only a few bills are being introduced through committees.

A bill relating to the establishment of a state brand for butter and cheese which would distinguish Wisconsin cheese and butter on the market from the butter and cheese of other states is receiving favorable attention. The bill provides for certain standards which must be observed before any factory can label its butter and cheese with this trade-mark. Iowa and Michigan and Minnesota have such a law on their books which, according to the sponsors of the bill, has resulted in increased prices for the firms which have met the standards and are using this trade-mark.

The legislature recently passed the bill making it compulsory for manufacturers of American cheese in Wisconsin to stay within the 40 per cent limit for moisture. Formerly the national law was the only guide. This permitted unscrupulous manufacturers to add as much moisture to the cheese as was possible, because the national law merely asks that 50 per cent of the total solids in the cheese must be fat. Thus manufacturers could manufacture cheese having only 40 per cent of total solids and 60 per cent moisture. They were within the law as long as 50 per cent of the total solids was fat. The new law makes this impossible.

Another law that has been enacted makes an annual appropriation of $7,500 for 1917 and 1918 for the discovery and eradication of the White Pine blister rust. As yet the damage done by this disease on the pine forests of other states has not been repeated in Wisconsin. It was to the advantage of the state that such a law be passed at this time, when it is still possible to combat effectively the disease with a good chance of eradicating it completely.

The assembly passed a bill introduced by Mr. Schroeder stipulating that all weeds shall be removed from the land adjoining public highways before the 15th day of August.

The assembly also passed the bill making an annual appropriation of $2,000 for field work for combating hog cholera.

Nursery inspection and control of plant diseases will be strengthened if the senate concurs in the bill passed by the assembly requiring the filing of a certified copy of the state certificate by every dealer in nursery stock, and making it unlawful for anyone to accept any nursery stock for shipment without a valid certificate plainly attached to the outside of the package or box showing that the contents have been duly inspected. The bill also gives the inspector the authority to request information of all shipments of nursery stock and the holding of it subject to inspection.

The bill introduced by Mr. Grell relating to the inspection of commercial feeding stuffs and seeds and the proper labeling of fertilizer material was favorably recommended by the committee on agriculture. The bill exempts manures in their natural condition from this inspection. It also includes a requirement for seed advertisers to state the kind of seed and locality in which it was grown in the case of cereal grains, corn, alfalfa, clover and tobacco seeds.

The highway bill creating a state trunk highway system and providing for federal, state and county coöperation in the construction and maintenance thereof has passed the senate and will be taken up in the assembly shortly. The total mileage of all roads and streets included in the state trunk system is not to be more than 5,000 miles. This trunk system is to be selected after full investigation has been made by the highway commission as to the most necessary and advisable routes. The system shall be laid out exclusive of every road in a place having a population of 2,500 or more. Two amendments to the bill were adopted by the senate, the first stipulating that in case the safety and welfare of the state require that construction shall not proceed work on the road be stopped. The second provides for a revolving fund of $3,000 for the printing of a map of the state showing the trunk highway system.

The senate highway committee recommended for passage the bill relating to superintendents of highways, and the bill passed by the assembly relating to the county and town bond for highway improvement has been reported for concurrence. The bond bill makes it possible for any county, if its board so determines, to raise money for improvements of prospective state highways by issuing non-taxable semi-annual interest payment coupon bonds bearing 5 per cent interest and running for not more than ten years. The money to be expended in the respective towns is to be determined by the county board. All towns have the same opportunity for improving any portion of the highways by a vote of the electors at the regular town meeting or special meeting. The money must be deposited with the county treasurer and be expended for highway purposes on roads designated in the ordinance authorizing the bonds.

Seven bills dealing with the eradication of tuberculosis and dealing with the appraisement of animals will be threshed out at a joint meeting of the committee on agriculture, finance and state affairs which was scheduled for the latter part of last week. It is to be hoped that a compromise on the good measures can be effected. There are several worthy bills among the number, the passage of which would place Wisconsin still farther ahead in the work of eradicating tuberculosis in cattle and hogs. The legislature last week legalized sale of tags for animals tested for tuberculosis. While this has been done for years, there was never an appropriation to take care of this work. Under the law a revolving fund has now been created which will take care of distribution of these tags to owners of tested animals.

Wisconsin Crops and Prices.

With this issue The Wisconsin Farmer resumes its crop reports. These reports are furnished by farmer correspondents. We believe they contain as careful information as can be secured.

The April 1917 government crop bulletin gives some interesting facts as they relate to Wisconsin:

The estimated value of Wisconsin farm land (improved) is now $95 per acre.

The condition of winter wheat in Wisconsin is given at 93 per cent, which is 5 per cent higher than the ten-year average.

The price of winter wheat in Wisconsin, April 1, 1916, was 98 cents per bushel and the price April 1, 1917, $1.65.

The condition of winter rye April 1, 1917 was 95 per cent as compared to a ten-year average of 91 per cent.

Wisconsin is much better with winter wheat than most states reported in the government bulletin. Of course the crop in winter wheat is comparatively small in this state.

Wisconsin has 904 gasoline or kerosene tractors actually in use on farms.

The following statistics relating to the value of farm products March 15, 1917, as compared to the same date 1916 will be of interest:

Hogs were worth per hundred, 1916, $8.50, 1917, $13.30; beef, $5.90, 1916, and $7.10, 1917; sheep, $5.90, 1916, $8.80, 1917; wool, 28 cents, 1916, 25 cents, 1917; milk cows per head, 62.40, 1916, $70.60, 1917; apples per bushel, $1.05, 1916, $1.60, 1917; cabbage per hundred, $1.40, 1916, $6.40, 1917; onions, $1.10 per bushel, 1916, $5 per bushel, 1917; beans per bushel, $3.67, 1916, $6.85, 1917; timothy hay, $11.80, 1916, $14, 1917; prairie hay, $7.90, 1916, $10.60, 1917; bran per ton, $22.90, 1916, $37.40, 1917; cottonseed meal, $35.90, 1916, $47, 1917.

The only two products mentioned in the report covered which have not shown a gain are maple sirup, which is $1.30 per gallon this year the same as it was last year, and horses, which averaged $158 per head March 15, 1916, and $150 per head March 15, 1917.

A more recent estimate of the farm value of other products has been made by the federal department of agriculture, this based as to date of April 1, 1917. A few of the quotations follow:

Corn, 1916, 74 cents, 1917, $1.11; wheat, 1916, 98 cents, 1917, $1.65; oats, 1916, 43 cents 1917, 58 cents; barley, 1916, 65 cents, 1917, $1.14; rye, 1916, 87 cents, 1917, $1.43; potatoes, 1916, 79 cents, 1917, $2.01; butter, 1916, 33 cents, 1917, 39 cents; eggs, 1916, 18 cents, 1917, 26 cents; chickens per pound, 1916, 12.7 cents, 1917, 15.8 cents.

The Wisconsin Farmer quotes these figures so that the readers of this paper will be able to understand exactly what opportunity they have for making extra profits this year on extra yields.

Seed For Replanting Corn

To produce an adequate supply of food for the nation and have a considerable surplus to spare is the greatest emergency which we now face. Europe at the present time is 150,000,000 bushels of grain short of normal. The Argentine country will not export a single bushel, owing to partial crop failure, so that the world's food supply for the next eighteen months will be largely determined by the hustle American farmers put into our work during the next six weeks.

In the central West we have to do mainly with corn and we are exceedingly fortunate to have on hand a supply of good seed. It is important that no man take for granted that his seed will grow without testing it. Ninety per cent corn is not good enough this year. We must have just the kind of a stand that we aim at. Those who believe that two stalks per hill is enough must get their stand from two kernels per hill, while those who believe that the soil will produce three stalks per hill should plant three vital seeds and three only. Those who have not tested can well afford to enlist the interest of all members of the family in getting the matter under way without delay. If we keep in mind the great national need we will not hesitate to spend an occasional evening hour at this task. If the work is done while the corn is still in the ear everything that is weak or dead can be discarded, and it is just as valuable for feed as vital corn. A single good ear of corn will produce a thousand kernels, or enough to plant 250 or 300 hills. What a disaster it will be to spend our time this year cultivating missing hills as the result of a little neglect at this time.

But we are going to suggest that the matter be carried one step further. While the testing operation is under way let a second supply of seed be sorted out. No man can foresee what the condition of the soil will be a month hence and a wet, backward spring may mean the rotting of the seed on a very large acreage. In that case we should be ready without a moment's delay with a new supply of seed that has been tested and graded ready for the planting. If the early planting is not good we must take our chances with late planting, knowing well that good fodder will result even though a full crop of grain fails to mature.

We find upon inquiry that in some cases individuals are endeavoring to get a second supply of earlier corn. Our best yielding varieties throughout a considerable portion of the central West require anywhere from 120 to 140 days to mature, but there are varieties that will be out of the way of frost in ninety or at the outside 100 days. They will not yield as heavily as the other kinds, but it will be commendable foresight to have a supply of this early seed for at least part of the acreage that we are planning on.

Increase Production.

"Increase production" is the cry of the hour. It comes from the lips of President Wilson, our various governors, the authorities of our state agricultural colleges, our practical farm papers, from all loyal, patriotic citizens who realize the immense responsibility which confronts the American farmer.

The Wisconsin Farmer is dedicated to the task of assisting the farmers of this portion of the country to live up to the need of the hour and to their great responsibility. We shall do everything possible to make the acres and the herds of our readers still more productive, to the end that the world may be fed and clothed and none shall go hungry. We propose to make The Wisconsin Farmer, throughout the coming year, of more practical value to every member of the farm household than it has ever been before in all the years of its existence.

While we are doing this, may we count on the assistance of every one of our large family of readers? Will those whose subscriptions have recently expired, and those whose subscriptions will shortly expire, attend to this important matter at once, sending in their renewal check without delay? Will every reader make himself a soliciting agent to secure at least one new subscriber? We shall do our share by getting out better and more practical and valuable papers than ever before. Shall we form a working partnership to increase production and make this the biggest and best year ever known in American farming? Do your share by attending to your subscription renewal without delay.

Cutworm Nuisance.

Every hill of corn must be saved this year, and to that end special precautions should be taken to prevent insect depredations. Usually considerable damage is done by cutworms, these pests severing the young plants just as they appear above ground. The natural habitation is sod ground, and it is not uncommon to find instances where the stand on sod is reduced from 25 to 50 per cent by these insects.

The first thing to be considered in heading off cutworms is late planting. This gives an opportunity for the worms to mature and pass into a dormant stage before the coming on of the crop. Under ordinary circumstances one can well afford to plant sod ground two, or even three, weeks later than the planting on old ground. The decayed roots in sod means the development of more or less heat, thereby bringing the crop along more rapidly, so that at maturity sod-grown corn, even though planted late, is generally out of danger of frost on time.

There is some advantage in keeping vegetation checked between the time of plowing and planting. After a sod ground is plowed it should be well disked, in order to cover all exposed grass. While presumably worms live on roots, their preference is for the tender part of the plant above ground, and lack of food either hastens their maturity or starves them out. We repeat, therefore, that free cultivation between the time of plowing and planting is generally effective in bringing about the destruction of worms.

Then, of course, there is the so-called garden plan of poisoning the pests. We have never favored this method very strongly for the simple reason that we considered it impractical when applied to a large area. A bushel of bran mixed with one pound of white arsenic or Paris green and made into a mash by adding eight gallons of water and half a gallon of cheap molasses will be sufficient to treat four or five acres. After the mash has stood several hours, simply scatter it about in lumps about the size of a marble over those parts of the fields where insects begin to appear. It should be placed near the base of the corn hills. Of course, this is a matter that involves considerable labor, and yet rather than to sit idly by and watch the crop going to its destruction by the cutworm route, one

FAMILY CIRCLE TALKS—By The Publisher.

(Continued from page 3.)

use to make ourselves better in our chosen line of work and more useful to our fellow men. Accepting that definition, the practical school of experience on the Wisconsin farm becomes as much an educator as any college or university.

Please do not misunderstand me; if your boy or girl wants to go to country school, town school, or college, and you can afford it, by all means let them go. Gratify their ambition for a school education to the limit. Go to college yourself, if you want to and can, even though your family is grown up, even though your hair is silvered and grandchildren clamber over your knees. But do not think this alone will suffice. We must put college training to practical use before it becomes real education. That being the case, the educated farmer is, of course, the one who succeeds, whether he ever saw the inside of a school classroom or not. In view of such a broad interpretation, the question of a college or university training becomes secondary. Going to a higher institution of learning is not going to make a success of any man, either in farming or anything else, unless he has natural aptitude, appreciates his education, puts it to practical use and gets into the work for which he is best suited and which appeals to him most. The school of hard knocks is one of the best in the world, when all is said and done.

A MAN WHO ALWAYS PLEASES.

THERE is no writer today whom I read with more genuine enjoyment than David Grayson, from whom I have frequently quoted in The Wisconsin Farmer, my last quotation being his remarkable tribute to the Bellflower apple. Nor is there any writer of today concerning whom I receive more inquiries from my readers. One can hardly have a taste for farm life and fail to be interested in Grayson's homely, philosophical sketches. Here is a typical letter, written by Mr. G. F. Trumbull:

Mr. James M. Pierce, whom I call our benefactor:—I send my copy of your paper on to young farmers for them to enjoy and profit by. In this way I feel that I am doing some good.

I want to get another copy of David Grayson's tribute to the Bellflower apple, which you printed recently. Would it be asking too much of you to send me another copy of that issue of your splendid paper, if you have it?

We are just starting our library. Thanks for the fine lists of good books you have published. Kipling's "Our Friend the Dog" is great.

I was able to send Mr. Trumbull The Wisconsin Farmer he wished, although I cannot always find back numbers, as the demand keeps the supply about exhausted. I am glad Mr. Trumbull likes Grayson so well, and I am delighted at the use to which he puts The Wisconsin Farmer after he is through with it. I always figure that each copy is read by five people, this being the average size farm family. Sending the paper on to others, after your own family is through with it, adds to its usefulness and makes the circle of my readers still larger, for which I am duly thankful.

There is so much interest in David Grayson among my readers, I am going to quote a little more from him this week, printing what he has to say about haymaking in this month's American Magazine. Grayson had been to the city for a day or two and was only too glad to get back to the hayfield, of which he says:

Haymaking is a really beautiful process: the clicking mower cutting its clean, wide swath, a man stepping after, where the hay is very heavy to throw the windrow back a little. Then, after lying to wilt and dry in the burning sun—all full of good odors—the horse-rake draws it neatly into wide billows, and after that John, the Pole, and I roll the billows into tumbles. Or, if the hay is slow in drying, as it was not this year, the kicking tedder goes over it, spreading it widely. Then the team and rack on the smooth-cut meadow, Bill on the load, and John and I pitching on! The talk and badinage that goes on, the excitement over disturbed field mice, the discussion of the best methods of killing woodchucks! Tales of marvelous exploits of loaders and stackers, thrilling incidents of the wet year of '98, when two men and one team saved four acres of hay by working all night—"with lanterns, I jing"! Much talk of how she goes on, "she" being the hay, and no end of observations upon the character, accomplishments, faults and excesses of the sedate old horses waiting comfortably out in front, half hidden by the mountain of hay above them and nibbling at the tumbles as they go by!

Then the proud moment when Bill, the driver, with legs apart, almost pushing on the reins, drives his horses up the hill!

"Go it, Dick. Let 'er out, Daisy. Stiddy, ol' boy. Whoa, there. Ease down now. Hey there, John, block the wheel—block the wheel, I tell ye. Ah-h now, jes' breathe a bit. I jing, it's hot."

And then the barn, the cavernous dark doors, the hoofs of the horses thundering on the floor, the smell of cattle from below, the pigeons in the loft whirring startled from their perches. Then the hot, scented, dusty "pitching off" and "mow-ing in"—a big process, an honest process; men sweating for what they get.

As I came in from the field that night the sun was low in the hills, and a faint breeze had begun to blow, sweetly cool after the burning heat of the day. And I felt again that curious deep sense I have so often here in the country, of the soundness and reality of the plain things of life.

Perhaps I should tell a little secret about Grayson. This is an assumed name, the writer's real name being Baker. Now, a few years ago, Baker was a magazine writer, who performed great public service by pointing out the evil and vice and graft that exist in the world. All of a sudden he stopped this, turned completely around and took to writing rural philosophy under the name of David Grayson. I like to think that he became so sick of the filth of political corruption that he sought to cleanse his own mind by writing his beautiful tributes to farming, which have brought such real pleasure to so many other minds. How much more enjoyable it must be to a man to write such pieces as his recent tribute to the Bellflower apple and this picture of haymaking rather than to have to deal always with the sordid things of life. Both kinds of articles serve a highly useful function and in both styles has Mr. Baker excelled. His stories of graft in high places have helped to purify public life in this country and there is a sweetness about his farm essays like the air as it comes off a hayfield that can hardly fail to make us all better men and women, better citizens, better Christians.

James M. Pierce

---

can well afford to take heroic measures even though these measures do involve labor. It goes without saying that the bran mixture referred to, after it is prepared, must be handled with considerable care, and especially must it be kept away from live stock, including poultry.

A Wisconsin Suggestion to the Government.

A. D. Campbell, manager of the Wisconsin Advancement Association, has written the following letter to Hon. Wm. A. Redfield, secretary department of commerce, Washington, D. C.:

I have your circular letter of the 14th in the matter of greater food production. Let me say to you that if we can get proper activity in the matter of further clearing of Upper Wisconsin land of stumps we can grow enough additional potatoes this year to feed at least 500,000 United States soldiers for a year following harvest next fall.

There are now at least 50,000 farmers in Upper Wisconsin who have land otherwise cleared than of stumps and there is no good reason why each one of them should not clear more land of stumps and plant to potatoes this year. I know that people who are not familiar with modern machinery for pulling stumps will say that this is a slow and hard proposition, but I call your attention to the fact that three men and a team can pull from two to three acres of stumps in a day and that the land will grow from 150 to 200 bushels of potatoes to the acre if only reasonably cultivated.

There is no reason in the world why with the coöperation of the federal government we should not have a remarkable increase in the acreage of potatoes in Wisconsin this year and in this connection I will say that there is no region in the United States better suited to large crops of splendid potatoes than these Upper Wisconsin counties and in this I do not overlook the famous counties in the state of Maine.

It has been a matter of surprise to me that people in the agricultural department at Washington have up to date failed to appreciate opportunities in Upper Wisconsin and I trust that in this most serious crisis in our food supply these people will awaken to the fact that Upper Wisconsin has no superior in the production of not only potatoes, but also all the root crops, hay and the grains, and that probably no such pasture prevails anywhere in America as in these Upper Wisconsin counties.

There is still time for the government to take charge of the situation which is suggested by Mr. Campbell. Of course, things would have to be done on a large scale and done quickly. But in a case of emergency such as we now face our government should not hesitate on undertaking a task which requires a little speed. We do not believe that Mr. Campbell overstates the situation when he says that it would be possible to raise in Upper Wisconsin this year enough additional potatoes to feed a half million soldiers for a year following the harvest this fall. The government has found funds for developing western arid tracts. Several million acres can be reclaimed more quickly and to greater profit in Upper Wisconsin than they could be in the dry sections of the far West. Furthermore, it would not be necessary to maintain any extensive irrigation systems for all time to make the Upper Wisconsin lands productive.

Some Things Wisconsin Can Do.

C. P. Norgord, Wisconsin commissioner of agriculture, in a special communication to the press, writes concerning the present agricultural situation as affected by the war. In part he says:

Certain special food crops should be increased in acreage. Among these are the following:

Spring Wheat.—Particularly in the northern end of the state where this crop grows better than farther south, the acreage can be increased, but the crop should be sown at the earliest possible date.

Beans for our lighter soils.—One of our most nutritious and best keeping crops particularly adapted to shipment and for use by the army and navy. Our neighbor, Michigan, last year raised 500,000 acres of this crop, while we produced only 18,000 acres. There is seed enough available in the state to increase this crop by at least 5,000 acres. The greatest emphasis should be placed upon this crop.

Buckwheat likewise is a staple human food crop which there is ample time to increase even upon new breakings.

Potatoes.—A crop which lends itself to increased production at this time.

Corn.—More must be used for human food and the greatest possible acreage should be put in.

Better culture and care of all farm crops and animals is a patriotic duty which should keep us in the fields from early to late.

Know that your seeds will germinate; that grains and potatoes should be treated with formaldehyde to destroy disease; that fruits of all kinds should be sprayed to prevent the tremendous losses from disease. Every family should produce its own garden crops so far as possible and become self-supporting. Hence, every member of every family must become a producer.

The labor situation more than anything else will limit production. The young people from our homes and schools must be organized for effective labor by parents and teachers. Such labor in proper amount and supervision is one of the most healthful practices in which our young people can engage. All the labor of every country town should be released as far as possible for the farm. Use labor-saving machinery and methods.

The present and prospective supply, the cost of labor and machinery, all indicate profitable prices for the farmers' crop.

It is still possible to increase the acreage of spring wheat in Upper Wisconsin and potatoes, corn and beans in most parts of the state. There is also still time to consider the cultivation of all crops and the treatment of potato vines for protection against bugs and disease. There is also still time in most parts of the state to double the size of the garden.

The best posted agriculturists are recommending corn for this season. Our soils are well supplied with moisture. There is plenty of good seed corn this year.

THESE TWO FREE BOOKS MEAN BIGGER CROP PROFITS FOR YOU!

My Famous Book "A Streak of Gold" and Galloway's 1917 Catalog

Ask For Them Today! A Postal Gets Both!

SAVE $25 TO $50 ON A MANURE SPREADER

My book **"A Streak of Gold"** tells how to get the most out of the manure crop with the least labor. My 1917 catalog tells how a run-out unproductive farm was turned into a gold mine crop producer. How to increase your corn crop from 15 to 25 bu. per acre. How a Galloway spreader will pay for itself in one year by increasing crop profits and leave money to put in the bank besides! How and why I save you $25 to $50 on a spreader by selling direct.

TURN THE MANURE CROP INTO CASH AT HARVEST!

Do it with a Galloway 1917 model No. 8 spreader. Spreading now means bigger crops this fall!

Prices never better! The producer is having his inning! Now is the time to get that big manure pile OUT ON THE LAND because every load means CASH IN THE BANK next fall for farm improvements, pleasures or other things you want. Get your manure crop out on the corn land--top dress the winter wheat! Get it on the soil where you are going to sow oats! Top dress the meadows--the alfalfa--the clover! A Galloway spreader used steadily for one or two weeks means that it will PAY FOR ITSELF because its use represents MONEY AT HARVEST time you otherwise would not get. Quit spreading by hand or using out of date spreaders when you can buy the best spreader on earth--the Galloway 1917 model Low Down No. 8 No. 5, or No. 1A and SAVE FROM $25 TO $50 over prices usually paid for spreaders not as good--not as down to date in design--not as light in draft--made of as fine materials, nor covered by the eleven Galloway spreader patents found exclusively on the Galloway.

GALLOWAY'S NO. 8 LOW DOWN SPREADER

is the crowning achievement of my spreader manufacturing career! Now built stronger than ever. The new Galloway wide-spreading V-shaped rake on every machine. DO NOT CONFUSE Galloway spreaders with low priced machines that do not have the special EXCLUSIVE PATENTED FEATURES and genuine merit (backed up by tens of thousands of Galloway spreader users). Beware of cheap, absolutely worthless imitations of the genuine Galloway at any price. DON'T BUY A SPREADER OF ANY MAKE OR KIND until you have tried a genuine Galloway 1917 model No. 8, No. 5 or No. 1A at our risk WITHOUT OBLIGATING YOURSELF in any way!

30 DAYS' FIELD TRIAL

Test Galloway spreaders **on your own farm** in your own way and take your own time! They are returnable to us within one year if they do not come up to every claim we make for them! I will **pay freight both ways.** A Galloway spreader must sell itself to you. You are the judge. Spreaders shipped from Waterloo, St. Paul, Kansas City, Chicago or Council Bluffs—whichever is nearest your station, more convenient to you.

BACKED BY A $25,000 BOND

I have deposited in the Black Hawk National Bank of Waterloo a legally executed $25,000 bond to guarantee that I will live up to every agreement and STAND BEHIND EVERY CLAIM I make for Galloway manure spreaders, cream separators, gasoline engines, etc. You have nothing to lose and everything to gain when you deal with Galloway. I manufacture these spreaders in my own great chain of factories right here in Waterloo. Come and see me any time. You are welcome and I will be glad to show you how Galloway divides the melon and ships direct from factory to farm.

8-31

WORTH $50 MORE THAN ANY OTHER SPREADER

Remember this spreader is **low down**—only 42 in. high to center of box. Easy to load. Lightest draft spreader of its capacity built. Two horses handle Galloway spreaders anywhere. The Galloway **wide-spreading V-rake, worth $15 extra** on any spreader—costs you nothing extra on the **Galloway.** The **invincible, irresistible, patented roller feed**--an exclusive Galloway feature—the secret of its **light draft,** alone **worth $25 extra** on any spreader--exclusive again on the Galloway--costs you **nothing extra. Patented Automatic stop, Uniform Clean Out Push-Board—worth $10 extra** on any spreader—exclusive on the Galloway—costs you nothing extra. These are only a few of the special features you will find on the Galloway which are protected by Galloway patents. Don't buy a spreader of any make or kind until you have tried a genuine Galloway 1917 model No. 8, No. 5 or No. 1A at our risk without obligating yourself in any way Try it in your field for thirty days and return to me within one year if not perfectly satisfactory. Remember we manufacture in our own factories and sell direct from factory to farm.

Notice These Exclusive Features

(A) Angle steel endless apron running over solid bottom. Adjustable from 6 to 24 loads per acre. (B) Our patented automatic stop, uniform clean out push-board--worth $10 extra on any spreader. Exclusive on the Galloway--costs you nothing extra.

(C) Feed lever. Adjustable to any number of loads per acre. Convenient, handy--above the load.

(D) Gear lever. Throws both sides of beater into gear simultaneously. Sprockets on both rear wheels. Remember double chain drive. No twisted beater, broken beater shafts. Gearing equipped with differential. Power continuously applied to beater shaft.

Read about these and other Galloway exclusive spreader features in my new big 1917 book.

INDISPUTABLE PROOF: I saved $29 by ordering a Galloway. I know it is a better spreader than I could have bought here for $125.--Geo. A. Kralik, Okla. City, Okla. I consider it equal to a prominent machine sold for $140. One neighbor who has used both says he would rather have the Galloway---W. O. Cracraft Eckley, Colorado. There are six Galloway spreaders in my neighborhood. They tried my spreader first. All are more than pleased. Have had no repairs in seven years.--Edw. Semmelroth, Tekonsha, Mich. I saved $39. Believe I got a better spreader than was offered me here for $135.--A. T. Miller, Orella, Nebraska.

Wm. Galloway, Pres., Wm. Galloway Co. 39 Galloway Station Waterloo, Iowa

Get My New Concrete Mixer Offer

I want ten men in every county right now to accept my special co-operative offer. It will help you obtain a Sheldon Batch Mixer at little or no cost. Let me tell you about it.

You probably need a mixer for concreting on your place—most farmers do. The Sheldon is the ideal mixer for the farm. Light and easily portable, durable, low-priced. You'll find it will prove a mighty good investment. Write for special offer.

Sheldon Batch Mixers $11.50 Up

MAKE BIG MONEY Concreting In Your Section.

You can easily earn $8 to $20 a day with a Sheldon Batch Mixer. Our customers are doing it right now. The jobs go to the man with a Sheldon Mixer every time. Saves labor of 1 to 4 men, according to size of job. Or, if you buy a machine for your own use, you can make many times its cost in a season by renting it to neighbors.

Improve Your Farm

Build your own silo, tanks, troughs, floors, foundations, buildings, etc., out of concrete with a Sheldon Batch Mixer. Will pay for itself on first small job. Beats hand mixing a mile. And it's a lot cheaper too. Takes the backache out of concrete. Makes possible those many small improvements on the farm that you wouldn't do without. Improvements which will add many dollars to the value of your land.

Get My FREE Catalog

Tells how to build your own mixer by using the *Free Plans* which we send with our iron parts. Also shows full line of built up machines. Two styles, hand and power. Will mix 2 1/2 cu. ft. in minute. Range 1 to 5 men busy. Chain drive, self-tilting dump, all parts guaranteed. Write today for catalog and special offer. Geo. G. Sheldon, Pres.

SHELDON MANUFACTURING CO., Box S-[illegible], Nebraska, Neb.

OUR QUESTION BOX

WISCONSIN FARMER subscribers are invited most cordially to submit their problems to this department. Names will not be mentioned, but all inquiries should be signed. The value of this department to our readers largely depends upon their own zeal in submitting questions or inquiries that are closely or remotely related to farm or home affairs.

Questions and Answers.

Mangels on Rich Ground.

Kindly tell me what root crops would be best to grow on land that was formerly used as a building spot. It is rather rich and it contains plenty of lime and a little sand. Naturally I want to get the largest possible yield from the ground in question.

The mangel crop will unquestionably produce a heavier yield than any of the other root crops. While turnips and rutabagas require a fairly rich soil, it is a fact, nevertheless, that if it is too rich these crops tend to grow too much to neck and top. Mangels may be seeded some time in May, and if the crop is well cared for during the growing season it will yield anywhere from fifteen to thirty tons per acre.

Potato Peelings For Seed.

Some people say you can get a crop of potatoes by using the peelings for seed. As seed potatoes are very high in price I would like to know what you think about it.

There might be enough vitality in potato peelings to start a new crop, but it will start it very feebly and it will be absolutely necessary to plant the peelings very shallow. When one considers that it requires just as much work to take care of a poor crop as it does a good one a conclusion must be reached that it will pay to use good seed. This year one may cut the seed to two eyes in a piece and plant them about eighteen inches apart in the row.

Time to Sow Cane.

I expect to put in five acres of cane this year because I am going to be short of hay. I would like to know what is the best time to sow in order to get the largest possible yield. Do you believe in sowing in rows so that you can cultivate the crop, or is it better to seed broadcast and thus avoid the labor of cultivation?

Cane is a warm weather crop and it should not be seeded ordinarily before the middle of May. Indeed, it will do quite well even if it is seeded as late as the middle of June. If it is sown broadcast at the rate of eighty pounds per acre the stalks will grow rather fine and in that case the product may be used as roughage for all classes of stock. A big saving in the amount of seed needed to sow a given area can be made by stopping up certain holes in the drill and seeding thickly in rows about thirty or thirty-two inches apart. All things considered, thick sowing is preferable.

A Quick Hay Crop.

I have a fifteen-acre meadow that was entirely killed out this last winter and it makes me short of hay. I would like to know what to sow in its place in order to have a supply of roughage this fall and winter.

Oats seeded at the rate of three bushels per acre and cut just as they are beginning to turn in color a little will make a fairly satisfactory hay crop. Sometimes even better results are obtained by sowing together two bushels of oats and one bushel of field peas per acre. This will make rather a richer hay and the only objection to it is that the peas are high in price. Do not overlook the importance of the cane crop. Four or five acres of cane seeded at the rate of eighty pounds per acre about the middle of May will produce an enormous amount of good hay if it is seeded on rich land. Millet seeded at the rate of two or possibly three pecks per acre will also give good results.

Characteristics of Corn Gluten Feeds.

FOODS rich in protein will always be of the utmost concern to stockmen of the central West for the simple reason that the dominating food products of this area are low in flesh-forming constituents. Corn only contains about 7½ per cent of digestible protein and this is not enough to satisfy the animal needs during either the growing or fattening period. In the process of manufacturing starch and extracting oil from corn there is an important and valuable residue known as gluten feed, which is made up of the flesh-forming constituents of the corn plus the corn bran or exterior covering of the grain. There is approximately three times as much protein in gluten feed as in corn. This means that it requires approximately 125 bushels of corn to yield one ton of concentrated corn gluten feed. In the manufacturing process, corn is first conveyed into tanks, where it is soaked for many hours, thereby softening the kernel. Following this it is ground or, rather, broken up, and separation begins immediately. The starch and oil are refined into edible products, but when these are taken out there still remains a valuable stock food.

A ninety-day feeding experiment was conducted recently at the Iowa Agricultural College with four lots of ten ewes, the object of this being to determine the value of corn gluten feed as compared with corn. In Lot No. 1 each ewe received one pound of shelled corn and two pounds of corn silage daily together with timothy hay, oat straw and salt. On this ration the ten ewes gained 228 pounds in ninety days, or an average of .25 pound a day. Side by side with this lot, ten ewes were fed at the rate of one-half pound shelled corn a day and one-half pound of Douglas corn gluten feed, together with the same amount of ensilage, timothy hay, oat straw and salt, as was fed to the first lot. Note that the total weight of the grain is the same in each case, but these ewes, during the ninety-day period, gained 261 pounds, or an average daily gain each of .29 pound. The substitution of one-half pound of Douglas gluten feed for one-half pound of corn materially increased the daily gains.

In still another lot ten ewes were fed one-fourth of a pound of shelled corn daily and three-fourths of a pound of Douglas corn gluten feed, the balance of the ration being identical with that in the previous lots. These ewes made a gain of 318 pounds in ninety days, or an average of .35 pound per day, though they received no more grain than the ewes in Lot 1. Where one pound of Douglas corn gluten feed was used daily, and no corn, the ewes gained 254 pounds in ninety days, or an average daily gain of .28 pound.

In one instance, by feeding 675 pounds of gluten feed instead of the same amount of corn, eighty-nine pounds increased gain was obtained. This increase, computed at 13½ cents per pound, the approximate market value, makes gluten feed in this experiment worth $1.78 per hundred more than corn. If we compare the gains in Lot 1, which received no gluten feed, with Lot 4, which received no corn, but only gluten feed in the form of grain, we find that the gains of the latter were twenty-six pounds more on the lot than of the former. This twenty-six pounds extra gain at current prices amounts to $3.51, thereby giving to gluten feed a value of 39 cents per hundred pounds more than corn as a straight ration, or $7.80 per ton.

While these rations show up gluten feed in a most favorable light, there need be no occasion for surprise for the reason that corn does not contain sufficient protein to satisfy the needs of the fattening animal. Furthermore, it is lacking in ash constituents. In the case of gluten feed we have, as said before, three times as much digestible protein as is contained in corn, and there is, in addition, a much greater percentage of the essential phosphates, and these, unquestionably, contribute something to the well-being of the growing or fattening animal.

In And Around Wisconsin.

THE Polk County Holstein Association sold seventy-five grade cows and heifers a short time ago for $2,615, which makes an average of $104.60 per head. The cattle were shipped to Gilby, N. D., where they will be used to start a dairy farm in that section, which now is almost exclusively a grain farming country.

AN announcement has been made that the Wisconsin Department of Agriculture is ready to assist farmers in procuring a supply of seed adequate for their needs. C. P. Norgord, Commissioner of Agriculture, Madison, has this matter in charge and farmers who are short of seed or have surplus seed for sale should advise Mr. Norgord of the fact.

IN order to consider ways and means of lending support to the nation in the present crisis brought on by war, the farmers' clubs in seven Wisconsin counties have formed a central organization. It is believed that the federation can deal more effectively with the problem of increasing food production than can the different organizations working separately.

CHEESEMAKERS and patrons of about a dozen factories in the vicinity of Vesper, Wood county, held a meeting to discuss the methods of figuring payments for milk furnished and cheese produced. The outcome of the meeting was the adoption of resolutions recommending that patrons be paid by the method of using the fat test plus six-tenths, and that cheesemakers be paid on the basis of pounds of cheese manufactured rather than on the basis of pounds of milk handled.

THE project to form a farmers' shipping association at New Richmond has been carried out and the first shipments have been made. The board of directors of the new organization are: T. B. Denning, John Knopps, Ed Rund, Charles Winnery and Charles Wilbert, Jr. Charles Whinnery was chosen president of the board. The loading and transportation of live stock is in charge of Peter Jenson, who was elected shipper. Membership in the company is based on ownership of stock, but the price of the stock has not yet been given out.

CONSIDERABLE enthusiasm was aroused among the boys of Pierce county at the baby beef institute, which was recently held at Ellsworth. W. L. Houser, of Mondovi, a practical stock man and an active member of the Wisconsin Live Stock Breeders' Association, conducted the meeting. A large number of entries were made in the boys' baby beef contest. Some of the boys had been in the calf contest the year before, but the number of new entries gave ample proof that this work is rapidly growing in interest and popularity.

THE fieldmen of the Wisconsin Dairymen's Association are receiving so many calls to help organize new local cow-testing associations that they are unable to respond to all of them. Walworth county, with six associations, claims to be the leader of this work in the state. At the following places organizations have recently been formed: New Lisbon, Walworth, Springfield, Spring Green, Muscoda, Avoca, Black Earth, Juneau, Stoughton Monticello, Bloomfield and Ladysmith. More than ever before Wisconsin Dairymen are striving to cut down the cost of production and maintain a high standard in both quality and amount of product.

PROOF that Wisconsin dairy cattle are in great demand over a wide territory is shown by recent shipments of Homer Bailey, a big shipper, at River Falls, Pierce county. In two weeks Mr. Bailey shipped eight carloads of pure-bred and high-grade dairy cattle to points outside of the state. Included in this number was a carload of Holstein milk cows which was sent to Sidney, Mont., and which had been purchased from the herds of Alton Bros. and John Chapman, of Pierce county. Three other carloads were shipped to Harveyville, Kan., and two carloads to buyers in Mississippi. These facts are further evidence that the high quality of dairy cattle raised on Wisconsin farms is gaining recognition throughout all the United States.

THE Wisconsin Council for Defense, patterned after the National Council, has been at work during the last four weeks encouraging and assisting the farmers in planting a large acreage of staple crops. The farmers are making a loyal response, according to the reports of experts and there is promise of a large production of both pasture and grain crops if the weather is at all favorable It is stated that because of the very great demand, no danger of overproduction or a slump in prices need be feared. Governor Phillip has appointed the following members of the Wisconsin Council for Defense: A. T. Van Scoy, Milwaukee, representing the manufacturers; Dr. J. S. Evans, of the Wisconsin University Clinic, representing the medical profession; J. R. Wheeler, Columbus, representing the bankers; P. C. Eldridge, La Crosse, representing the railroads; J. G. De Mack, of the University College of Engineering; John Reese, Dodgeville, banker and farmer, and Magnus Swenson, of Madison. The governor himself is a member of the council, and the representative of the Red Cross interests and of the labor interests had not been chosen when this was written.

Here It Is—Your Lighting System

Jupiter PLANTS

The Great Lighting Plant with a 2-Year Guaranteed Battery

NOW you can get the lighting plant for your farm that you've been waiting for—a plant with a guaranteed battery. You want electric light for your farm—you need it. You have simply been waiting for the *right* plant at the *right* price.

If you have investigated farm lighting plants you know that the battery is the heart and life and soul of the plant. The first great advantage of the Jupiter plant is that it is equipped with the famous 2-year guaranteed Perfection Battery.

Guaranteed Service

With proper care and usage you will get four to five years' life out of it—or even more. And battery renewals cost very little in this plant. Another great advantage of the Jupiter plant is its generator—not just *any* generator, but a real farm lighting generator designed and built especially for this purpose.

Operates On Your Own Gas Engine —Therefore, Costs $75 Less

You do not have to buy a gas engine with the Jupiter plant—your own gas engine will operate it. Therefore, its cost is $75 less than most plants sold with gas engine. That leaves you a $75 margin with which to purchase a very much better engine, if you haven't one already, than the engines which come with lighting plants.

You can operate the Jupiter Plant and charge your batteries *at the same time* your engine is doing other work—without one cent of extra cost for gasoline in generating your electric current.

We can furnish you with a good gasoline engine if you wish—but we do not make you take it as a part of the Jupiter plant, because your own gas engine will operate it just as well and save you money. The care and operation of the Jupiter plant is absolutely simple—a child can run it and care for it The cost of operation is almost nothing.

Jupiter Jr. No. 2 Complete $200

Cash or Time Payments

We will arrange for suitable time payments if you desire so that you can enjoy the modern, clean, convenient electric light which the Jupiter plant brings while you are paying for it. Fill in the coupon below, tear it out and mail to us today—and in return we will send you our attractive booklet and full particulars.

DEALERS ELECTRIC LIGHTING CO.
2903 Indiana Avenue, Chicago

It's mighty poor economy to buy a good car and keep it knocking around the place without a home of its own

Build a Garage

Your car is an investment worth protecting, and a garage of "Old Faithful" HEMLOCK is the way to protect it. Keep the car by itself where it won't get damaged; where greasy rags, gasoline and other inflammable things are out of harm's way, and where you have a place with everything handy when you have a job of engine-tinkering or cleaning to do. *A garage built of*

"Old Faithful" HEMLOCK Lumber

will cost mighty little, and we shall be glad to supply the plans free so you may learn by experience the good points of the farmer's stand-by lumber. HEMLOCK is economical, lasting, light and pitchless.

PLANS FREE: Send for the "Old Faithful" HEMLOCK Booklet (just out) which shows pictures of garages as well as farm houses, town houses, barns, and other farm buildings for which we furnish free plans drawn by well-known architects, and include complete specifications and all practical details. If you are handy with tools you can build from them yourself. The book contains a COUPON GOOD FOR ANY TWO SETS OF PLANS FREE when presented to YOUR LOCAL LUMBER DEALER. He has the plans or can get them from us for you. We'll be glad to give you any advice or information we can. Just write

THE HEMLOCK MANUFACTURERS
(of Wisconsin and Northern Michigan)
300 F. R. A. BUILDING **Oshkosh, Wisconsin**

If your lumber dealer cannot supply plans, we will send them direct for 50c for garage or outbuilding, $1.00 for house or barn.

ATLAS EXPLOSIVES

Anyone Can Use Atlas Farm Powder

No experience or skill is required, because Atlas Farm Powder is made especially for you. You can do your own blasting without trouble or risk by following a few simple instructions that even children can understand. Many women farmers use

Atlas Farm Powder
THE SAFEST EXPLOSIVE
The Original Farm Powder

Improve the fertility of your soil, get out stumps and shatter boulders quickly, safely and cheaply with Atlas. Blast beds for tree-planting, dig ditches and do other kinds of farm work in the most economical, up-to-date way.

Atlas Farm Powder costs little compared with the cost of labor that it replaces. You can buy it from a dealer near you. If you don't know him, ask us. We will also tell you exactly what you need for any kind of work.

Get Our Free Book—"Better Farming"
It tells you how to save labor on your farm by using The Safest Explosive for stump blasting, ditch digging, tree-planting, subsoiling, etc. Fill out the coupon *now* and mail it *today*.

ATLAS POWDER COMPANY General Offices: **Wilmington, Del.**
Sales Offices: Birmingham, Boston, Houghton, Joplin, Kansas City, Knoxville, New Orleans, New York, Philadelphia, Pittsburgh, St. Louis

FREE BOOK COUPON
ATLAS POWDER CO.
Wilmington, Del.
Send me your 74-page book "Better Farming." I am interested in the use of explosives for the purpose before which I mark X. WF11

The Farmers' Open Forum

WITH CONTRIBUTIONS FROM READERS OF THE WISCONSIN FARMER

Dairymen Wil ing to be Told

To the Editor:—The future progress of the dairy industry of the community, county or state will in a large measure depend upon whether or not the dairymen fully understand all of the factors that will influence their income from the dairy. All the men who milk cows and sell milk or cream may not take the time to figure profit and loss. It is, therefore, natural that they will consider facts presented to them by the creamery operators, buttermakers and others.

Several thousand dollars is lost annually by the dairymen because the test of the cream is below 30 per cent. The creamery company is also the loser. In 1915 approximately 105,000,000 pounds of butter fat was delivered to the factories of the state, largely in the form of cream. If the average test of the cream was 30 per cent the dairymen skimmed and sold 350,000,000 pounds of cream. If, on the other hand, the test of the cream was 25 per cent, 420,000,000 pounds of cream was sold, or a difference of 70,000,000 pounds of skim milk. If 20 per cent of cream was sold, 525,000,000 pounds was hauled from the farm to the factory, or a difference of 175,000,000 pounds of cream when comparing the 20 and the 30 per cent product. It is no wonder that the calves and the little pigs of Wisconsin prefer high-testing cream; it leaves more milk in the feed pail. What is 175,000,000 pounds of skim milk worth to the dairymen when corn is $1 per bushel? It means $875,000.

In reply the dairymen hold that buttermilk is returned to the farm. In some places it is, but not to the farms where the cream is collected by haulers or the buttermilk is sold to a few parties at a nominal sum per barrel. We admit that some of the buttermilk is returned to the farm in exchange for the extra skim milk that was in the thin cream, but the value of this buttermilk will not make up for the loss in the quality of the butter and the extra cost of factory operation, due to handling low-testing cream. The farmer pays for the extra cost of manufacturing the butter and he also loses when the butter does not bring the highest market quotation.

Dairymen, the keys are in your hands, and it is within your means to save this enormous waste. The higher testing cream, 30 to 35 per cent, leaves more sweet skim milk to be used as feed for the calves, etc. The cream will be of higher quality and you will have less cream to care for on the farm and to haul to the factory. The only objection that can be raised against the 30 to 35 per cent cream by the cream producers is that a little more cream adheres to the inside of the cans, but this need not be a loss. Cans are rinsed at the factory, and if the cream hauler leaves a little cream in the cans it can be saved. Whatever cream remains in the cans at the farm can be removed by rinsing the cans with fresh skim milk from the next skimming and run that product through the separator after the regular milk has been skimmed. The product rinsed from the cream can may also be used on the family table or for cooking purposes.

C. E. Lee.
Assistant Commis..oner Wisconsin Dairy and Food Department.

Farmer Posted on Feed Values.

To the Editor:—The past fall and winter has been a season of shortage in the line of the proper kind of roughage for feeding the dairy cow. The farm-grown grains yielded well, but owing to the large number of dairy animals kept in this section of the state a large quantity of commercial feeds had to be shipped in. There were only a few farmers who seemed to have the foresight or good judgment to lay in a full supply in the fall at a reasonable price. So with most of them it became not a question of what is best to feed our cows, but what can we get at most any price to feed them. The severe freezing weather of one year ago killed the greater part of the clover seeding, so this called for a larger amount of grain than would have otherwise been fed.

Our cow-testing association membership is too badly scattered to coöperate in the buying of feeds, there being no less than seven shipping points. Besides the farmers here seem to prefer the elevator men to control the feed proposition. This has caused them to not be slow to take advantage of the scarcity and it seems to be popular whether necessary or not. For instance, during a single week the price of a standard brand of dairy fed was put at $34, $36, $38 and $40 per ton. These towns are within a radius of about fifteen miles and we doubt the necessity of jockeying the price in that way.

There is a growing tendency among the farmers here to get away from some of the high-priced commercial feeds. The thinking dairy farmers are getting to see it is best to stick closer to the farm-grown grains, only buying such protein concentrates as oil meal, dried distillers' grain, cottonseed meal, etc., and in so doing derive more profit from their work and add more years of usefulness to the dairy cow.

A large majority of the dairy farmers in this community are well posted on the question of what and how to feed their stock. This is owing largely to the vast amount of information contained in the average farm and dairy papers that are found in most every farm home. Frank Lynn.
Fond du Lac Co., Wisconsin.

Guernsey Breeders Meet in Baraboo.

To the Editor:—The Guernsey breeders of Sauk county met at the business college building in Baraboo on March 31, 1917, for the purpose of forming a Sauk county Guernsey Breeders' Association. The election of officers was as follows:

President—Carl Wichern.
Vice President—R. F. Klemm.
Treasurer—Pierce Martiny.
Secretary—Clifford Capener.

The name of the association is the Sauk County Guernsey Breeders' Association. The object of the association is to promote the breeding and improvement of the high-grade and pure-bred Guernsey cattle in Sauk county, to aid its members in buying, breeding and selling first-class animals; also to establish a good reputation for Sauk county as a Guernsey center. This association is composed of dairymen who use pure-bred Guernsey sires exclusively in their herds, or have Guernsey herds under their immediate management.

It was voted to appoint a committee of three men to form the constitution and by-laws, consisting of R. F. Klemm, Pierce Martiny and Clifford Capener.

The governing body of the association is composed of a board of directors of nine active members, as follows: Henry Winke, Glen Johnson, George Hengstler, Roy Prouty, Pierce Martiny, Carl Wichern, Louis Wichern, R. F. Klemm and Clifford Capener.

The committee on the constitution and by-laws will be ready to report in a short time. Sauk county has been very successful in winning first prize and silver cup at the state fair at Milwaukee on fine county exhibits of agricultural products. Sauk county has one of the most successful coöperative creameries in the state. Anyone thinking of raising more young stuff should not hesitate for fear that he cannot sell them. You are not alone in this business now. You have the Sauk County Guernsey Breeders' Association to help you. Clifford Capener, Sec.
Sauk Co., Wisconsin.

Change in Name of Noted Hotel.

HEREAFTER the well-known Hotel Kaiserhof in Chicago will be known as the Hotel Atlantic. There will be no change in the management, but the hotel will be conducted on the same satisfactory plan as in the past. The location of Hotel Atlantic, on Clark street just south of Jackson Boulevard, is one of the most central in Chicago. The Atlantic is a strictly modern hotel in every way, and has long had the reputation of being one of the most comfortable hostelries in Chicago, and this reputation will be fully maintained in the future.—Adv.

CURRENT EVENTS

THE war finance bill of the United States, providing for issuance of $7,000,000,000 in securities—the largest war budget in any nation's history—was passed unanimously by the senate last week. It had already passed the lower house unanimously, so that in both houses of congress not a vote was recorded against it. The bill provides for a loan of $3,000,000,000 to the allies fighting Germany. Of the eighty-four senators present when the vote was taken, every one, including all those who voted against war except Senator Lane, of Oregon, who was absent because of illness, recorded themselves in favor of providing the funds to prosecute hostilities. Nearly all of the twelve absentees were ill. That, in the inability of the nation to supply men at once for the fighting lines, money should be America's immediate contribution to her allies, was the dominant thought expressed during the debate. Few senators participated in the discussion, which was totally devoid of partisan expression. Every senator speaking announced stanch intention to aid the government in prosecuting the war to speedy conclusion. Only two, Senators Borah and Cummins, declared opposition to the proposed allies' loan. A few favored raising a larger proportion by taxation of the present generation and less upon bonds.

THE participation of the United States in the great European war was warmly praised by the leading members of the British parliament last week. Both the legislative houses adopted—the house of lords unanimously and the house of commons with only one dissenting vote—resolutions expressing the profound appreciation of the British nation for the action of the United States in entering the war in defense of the high cause of freedom and the rights of humanity. The resolution in the house of commons was moved by Andrew Bonar Law, chancellor of the exchequer. Former Premier Asquith, seconded in an eloquent speech. The resolution in the house of lords was introduced by Earl Curzon, of Keddleston, lord president of the council. In all the speeches in both houses particular reference was made to America's purely disinterested intervention, "the most disinterested in history," as Mr. Asquith phrased it—the complete absence of any motive of self-interest, calculation or ambition. In the house of lords, Earl Curzon said the entry of the United States in the war stamped the struggle as a great uprising of the conscience of mankind to end the rule of Satan on earth. The president's speech to congress, Earl Curzon added, was a trumpet call, the sound of which would ring through the ages.

THE British and French continued to be successful last week in pushing German lines back on the western front, freeing a large portion of captured French territory from the forces which have held it for the past two and one-half years. The Canadian troops continued to cover themselves with glory, taking and retaining positions which had been considered absolutely impregnable. In four or five days the French troops captured 17,000 unwounded German prisoners, together with seventy-five cannon and a large quantity of other arms and stores. The latter part of the week the Germans were reported as fleeing in disaster, their retirement prior to that having been orderly, some of the ground being voluntarily surrendered, when it was found that the odds were against them. There has been but little activity in other sections, but the big push of General Haig, the British commander, and General Nivelle, the French commander, seems to have been signally successful, putting new heart into the allies.

THE St. Louis Chamber of Commerce has pledged itself to help the farmers in any way possible to stimulate production, even to the extent of working for a guarantee of minimum prices for foodstuffs, if necessary. This action was taken after Carl Vrooman, assistant secretary of agriculture, told the chamber that if the war lasted long the southern states probably would go hungry. If the railroads were taken over by the government for military purposes, he said, it would be difficult to transport food in sufficient quantities to the southern states. Mr. Vrooman said he had been assured at Memphis that $2,000,000 of food products would be raised this year within the city limits. He said he regretted to hear that farm boys were enlisting in the army and navy more readily than city boys. The city boys, he said, should do the fighting and the farm boys should stay at home and till the fields. Clubs, hotels and households should go to a war-time ration, he urged.

ASSURANCES have reached Washington that under no conditions that are now conceivable will the provisional government of Russia yield to the overtures from German and Austrian socialistic representatives to negotiate a separate peace. From every quarter comes assurance of support for the Russion provisional government. Rehabilitation of the crippled Russian railways by a corps of more than 500 trained American railway men will be the early result of an appeal to the president from several of Russia's ablest engineers. The new government thus will be strengthened against the pressure to make a separate peace with Germany. Plans to lend the Russian government some $2,000,000,000 out of the new $5,000,000,000 war bond issue already have been formulated, but American aid is to go still further and make effective the expenditure of the great sums of money the new Russian democracy is to receive from the United States.

THE English food controller, Lord Devonport, has issued an order, prohibiting the sale of light pastries, muffins, crumpets or tea cakes. Cakes, buns, scones and biscuits can only be sold if they conform to the drastic restrictions respecting the amount of wheaten flour and sugar used. Tea shops, which are so popular in London and elsewhere in England will suffer severely by the new order. The war office has ordered a return made by May 1st, of all horses, mules, cattle, sheep, pigs and agricultural implements in Great Britain.

MAJOR-GENERAL WOOD, addressing the American Cotton Waste Exchange at Boston, said the United States would not fulfill its duty in this war until it had sent men to the front. "If we are to be part of the war," said General Wood, "our men in our uniform must be at the front. It is no child's play. We shall send living men and bring them back dead—but never until this is done shall we fulfill our duty. You are now standing behind the allied lines and behind such forces as we have afloat. There is a long period of preparation ahead of us, and the first step is to back up the plan for universal military service. You cannot let somebody else do your job and have a clear conscience. A voluntary service, however delightful in theory, is ridiculous in practice. Only 6,000 men have been enlisted in two weeks, and I leave it to you to estimate how long it will take to get an army of a million men."

Wisconsin Potato Institutes

The potato institutes which finished their course on March 31st, at Crandon, have been especially successful this year. The commercial agencies of all the counties where meetings were held coöperated with farm institute officers and with the State Potato Growers' Association in a manner that insured a satisfactory turnout at every meeting. The itinerary of the institutes included Shawano, Oconto, Amberg, Gillette, Mountain, Laona and Crandon. The choice of these cities was made because of their importance as points for shipping and sections where potato interests are coming in for bigger development. Marinette county formed a potato growers' association, with W. E. Morton for its secretary. Forest county formed another association at Crandon, with John Swinehart as secretary, and Shawano formed another, with Merton Moore as secretary. At every one of the institutes the attendance was especially good, a fine interest manifesting itself among the growers. A practical program was carried out at each point. Prof. J. G. Milward, of the college at Madison, had charge of the work. Talks were given on handling the seed stock, seed storage, treatment, handling potato soil, and summer cultural problems. A complete exhibit of standard potatoes, together with charts and illustrated lantern slides, formed a feature of the institutes. The meetings will be followed up with summer sessions on the fields of members of the associations where practical demonstrations will bear out the points brought out in the talks.

Sunlight has been found a great germ destroyer. Disease breeding germs cannot live long in its rays and for this reason buildings in which live stock are kept should be arranged to admit as much sunlight as possible. A barn with ridgepole running north and south is best, since windows on the east side will admit the morning sun and those on the west the afternoon sun.

"The Car of No Regrets"

KING EIGHT
60 HORSE POWER

UNFAILING SERVICE on FARM or BATTLEFIELD

Four luxurious body models mounted on the famous King chassis adopted for light armored cars by the U. S. Army and U. S. Marine Corps

FOURSOME—$1585—(*Shown above*)—Designed for those who desire the sport type of car, with long, low, rakish lines yet in perfect taste. Narrow and "racy," this car seats four in comfort, has lengthy leg-room and is provided with four doors. A locked compartment just behind the rear seat gives generous and convenient storage space. The two front seats are of the "bucket" type. At their back is a combination tonneau and handy lamp which may be removed from its socket and carried about the car. Color: deep maroon.

TOURING—$1585—With all the advantages of a 120-inch wheel-base, this car has the roominess of a Six of 126 to 128 inches due to compactness of King V-type motor. Has many novel conveniences, and upholstery and finish are of the highest grade. The ideal large-family car. Seats seven. Color: dark green.

SEDAN—$2150—A year 'round car of the most luxurious type, upholstered in highest grade cloth and equipped with divided front seats. Sides completely removable in a few minutes without leaving car, and as easily replaced. A special compartment behind rear seat is provided for storage of side sections. With sides in place this seven-passenger model becomes a perfect closed car, all sections fitting without possibility of rattle and with no appearance of being improvised. Three colors: beaver brown, deep maroon or suburban blue.

ROADSTER—$1585—A very popular model with farmers, physicians and salesmen, because of large storage space. Has two roomy compartments; one behind front seat and the other under rear deck. Comfortable for three. Color: French gray.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning disease, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

Carelessness Causes Heavy Poultry Losses.

To the Editor:—A farmer once came to me and said, "Lawrey, I wish that you could tell me what is the matter with my chickens, as they seem to be moping around sneezing, etc." I said that it seemed as though they were roupy and he asked me if I would go out and see them if he would take me out and bring me back. I said, "Sure thing." When we arrived at the farm he took me out to the chicken house, a new one, made of hollow blocks and costing $600, a handsome house, with windows on all sides and so fastened that they could neither be raised nor slid back. The inside of the building was plastered as fine as a dwelling house and the roosts were hung by wires suspended from the ceiling so that there was no opportunity for mites to get to those chickens while on the roosts. When we opened the door of this building it was winter and I thought that I would faint from the effects of the stench that came out of it. The chickens seemed as though they were all sick to a certain extent. I said, "Take out those windows and leave them out and in their places put frames of muslin and I think you will soon find your fowls all right." He did so and gave them some permanganate of potash in their drinking water and the next time I saw him I wanted to know how those chickens were doing and he said, "Fine." The walls of that building were covered with moisture and no living thing could stay in that building and live any length of time.

I have another case in mind where a farmer wanted me to see his chickens and geese and, as it was a cold time, he had shut them all in and in the morning when he opened the door of the building the stench that came out was enough to make the angels weep. I looked in and the geese and ducks were under the roosts where the chickens slept and the manure was several inches thick, and yet such people wonder why they lose so many chickens. Some years ago a farmer wondered why his chickens were dying so fast and he wrote to an expert to know the cause of the dying. The farmer said that he knew of no cause for their dying. But on inquiry it was discovered that when the farmer cribbed his corn in the fall he put a lot of salt in it and in the springtime the shelled corn was in the bottom of the crib and the chickens had access to all that they could eat and they were dying from the effects of eating that corn.

A few years ago a poultry fancier wrote me and told me that he had lost twelve of his best chickens in a day and wondered if I could tell him what ailed them. I wrote to him and asked if there was any brine or salt that they had access to and he wrote me and said that he had put some beef brine outdoors and they could get that, but that he did not know that it would injure the fowls. I told him that he need look no further for the trouble, as that brine or any other brine would kill those chickens as quickly as the rankest of poison. Again we find people who will take a fresh paint can and put it somewhere where water falls into it and the first thing the people know they have several dead chickens and wonder why it was so. I remember another case where a little girl, the daughter of a storekeeper, had a nice flock of fifteen Buff Orpington chickens. One day her father took up the leavings in a cracker barrel, one that had salted crackers, and the chickens were fed before dinner and after dinner six of them were dead. She told me of their death with tears in her eyes and was wondering what caused their death and it was by my talking with her that brought out the feeding of the cracker refuse.

Many a flock of fowls have been wiped out on account of the water they had to drink. You and I have seen places where the chickens had to drink from the filthiest of water. It does beat the world how some expect to be successful with poultry and yet pay no attention to their comfort. J. R. Schureman says, "That at least 90 per cent of the ailments that attack our fowls are directly due to either the carelessness or ignorance of the attendants, especially where fowls are confined in limited quarters. It is a noticeable fact that fowls on the range shifting for themselves the greater part of the time are seldom troubled with the diseases that attack fowls in confinement. This proves that where conditions are favorable the fowls will keep in good health without the aid of medicines. There are almost numberless causes for the diseases of fowls, among which may be mentioned the following, each one of which should be avoided: Inbreeding, impairing the stamina and vitality of the fowls; the presence of an accumulation of filth in or around the poultry houses; stagnant and filthy drinking water; improper ventilation or overcrowding the poultry house, especially the roosting quarters; direct drafts in the poultry house; allowing the birds access to decaying vegetation or flesh; lack of good, sharp grit; lice, etc. The time to doctor a sick fowl is before the fowl gets sick, and the way to do this is to pay attention to the above advice. In addition he says that the breeding birds should be in the best of health, their blood being as free from disease as possible."

In the future, then, let us all work to keep our birds free from disease, as there is no other animal on the farm that pays as well as old biddy if you will give her half a chance.

James Lawrey.

THE FARMERS' MARKET

WANTED—FOR SALE—TO EXCHANGE

THIS department is to bring the buyer and the seller together. You may want help. You may have live stock, poultry and eggs, or machinery for sale. Maybe you want to sell or to buy a farm. Think how you can advertise now. Write your copy for the advertisement. The rate is six cents per word, each insertion. Note the low cost to reach our 90,000 circulation.

FARM LANDS.

NORTH DAKOTA is essentially an agricultural state. In past five years it ranked first in production of wheat twice; twice it was second and once third; always first in production of spring wheat; also flax, equalling production of all other states. Once it was first in barley—never below third; never below seventh in rye or oats. Has made great increase in corn and stock. You can still obtain home there without commission to us, while land is still cheap. Easy terms. Write at once for plan direct dealing. J. S. Murphy, Immigration Soo Line Railway, 1272 Soo Bldg., Minneapolis, Minnesota.

POTATOES, three to four dollars. Onions, twelve dollars per hundred weight. Central Minnesota excels in producing these crops. They are the highest quality too. No county beats Aitkin. Lands are cheap. Prices from our company direct are low. Terms are made to suit the man who buys. Get ready to come. Buy before the price advances. Deal with the railway company that owns the lands and gives easy terms. ARNOLD, Land Agent, Rock Island Railway, 132 Wolvin Bldg., Duluth, Minn.

HERE IS YOUR CHANCE—Get a home; $1.00 per acre down and long time on balance. Hardwood timber land with timber enough to pay for the land and build your buildings, close to market, school and cheese factories. Clay loam soil all tillable. Taylor Co., the clover and dairy belt of Wis. Rib River Land Co., Medford, Wisconsin.

HARDWOOD cut-over land, silt loam, clay subsoil. Not sandy or gravelly. Close to towns. Good roads. In the heart of the dairy country. You deal direct with the owners. No agents and no commissions. Easy terms. Write for map and booklet 9. North Western Lumber Company, Land Department, Stanley, Wis.

I AM the owner of 200 acres of very fine land, all level, clear of encumbrance, all under cultivation, 20 miles from Madison, Wis. As this is a portion of a large farm, there are no buildings on it. I will consider a cash offer, easy payments, or will exchange for a small Wisconsin farm, or Milwaukee property. A, care of Wisconsin Farmer.

FREE—We are interested in seeing the low-priced farm lands around our home developed. If you are looking for land, just write me and say: "Without any cost to me, tell me how you got your farm home." Address Mrs. Lucy L. Ferguson, B-26, Cedarville, Marinette county, Wis.

DON'T postpone that trip to the cheap land districts of upper Wisconsin; it is important if you want some of the best cheap land in America. Write us for names of owners. Wisconsin Advancement Association, 1590 First National Bank Bldg., Milwaukee, Wis.

IMPROVED farm, near Minneapolis, 177 acres, $13,500. 320, prairie farm, Norman county, Minn., $12,000. Three quarters, Walsh county, North Dakota, improved, at $37.50. Stodden, owner, 619 Security Building, Minneapolis.

GOOD corn, clover and grain land; improved, partially improved, or unimproved, at prices ranging from $15 to $100 per acre; best of location and soil. Write us now. W. E. WEBSTER, Hudson, Wis.

UPPER WISCONSIN—40 to 80-acre tracts, well located; small buildings, clearings; $20-$30 acre. Terms, one-fourth down, balance easy. Wisconsin has no crop failures. R. J. Russell, La Crosse, Wis.

HIGH class dairy farms, partly improved farms, and choice unimproved cut over hardwood land in wonderful Central Wisconsin. Pictorial bulletin free. Adam Paulus, Marshfield, Wis.

WISCONSIN—Large list improved farms, unimproved lands, 60 miles from twin cities, good dairy, clover belt, easy terms. Write for list. RIVARD, Turtle Lake, Wisconsin.

BIG bargain, 80-acre improved stock and dairy farm 2 miles from Athens, $55.00 per acre. Write for particulars. John Braun Lumber Co., Athens, Wis.

200 acres, 25 clear; timber pays for land. Price $6,000. Best improved and unimproved Marathon county farms. J. G. Wolf, Wausau, Wis.

MARATHON County Farms for sale. Bargains. Geo. Ritger, Cashier State Bank, Marathon, Wisconsin.

HAVE two farms for rent; might sell or trade one for town property. M. A. Peoples, Ladysmith, Wisconsin.

BUSINESS CHANCES.

FREE for six months—My special offer to introduce my magazine, "Investing for Profit." It is worth $10 a copy to anyone who has not acquired sufficient means to provide necessities and comforts for self and loved ones. It shows how to become richer quickly and honestly. Investing for Profit is the only progressive financial journal and has the largest circulation in America. It shows how $100 grows to $2,200, write now and I'll send it six months free. H. L. Barber, 509-28 W. Jackson Boulevard, Chicago.

GOVERNMENT POSITIONS.

MEN AND WOMEN, 18 or over, wanted for U. S. Government life jobs; $75.00 to $150.00 month; steady work; short hours; rapid advancement; common education sufficient; write immediately for free list of positions now easily obtainable. Franklin Institute, Dept. B176, Rochester, N. Y.

MONEY TO LOAN.

MONEY to loan on Wisconsin farms in amounts of $5,000 to $25,000. Security must be over the amount of the mortgage. 6% with privilege of paying $100 or more at any time. Address 206 Washington Bldg., Madison, Wisconsin.

FARM LOANS on very good farms at 5% interest without commission and with privilege of partial payments. Write Geo. L. Jacques, Special Loan Agent, Northwestern Mutual Life Insurance Company, Neillsville, Wisconsin.

JERSEY HEIFERS.

JERSEY heifers, cows and bull calves of American and Island breeding. Very reasonable. M. C. Vosburg, Ft. Atkinson, Wis.

CHESTER WHITE PIGS.

CHESTER White fall pigs sired by W. B.'s Wonder now ready to ship. Wm. F. Belda, De Forest, Wisconsin.

SAVE MONEY ON LUMBER.

SAVE money on your lumber bill. Write us. Pacific Coast Sawmill Co., Portland, Oregon.

TAIL HOLDERS.

COWS' tail holders, post paid, sample 12, 5 or more 10c each. F. C. Gunther, Elmwood, Wis.

Badger Crops Wintered Well.

Clover, Rye and Winter Wheat Are Safe—Plowing and Oat Seeding Have Begun—Live Stock Are Healthy, But Thin.

WISCONSIN.

Chippewa County.—The weather is fine and seeding is well started. Rye and winter wheat look fine and the acreage of these crops is large. Clover came through the winter in fine condition. Some cattle have been turned on to pasture because of scarcity of feed. Live stock are healthy. Farmers in this vicinity have just organized a shipping association and are sending stock to the New Richmond packing plant every Tuesday and Saturday. The milk condensery will start within a few weeks. Butter is worth 42 cents and milk for the cheese factory is bringing about $2.60 a hundred.—Ernest Neitzel.

Crawford County.—Spring work is in full swing. Nearly every one is in the field sowing oats. The weather has not been very favorable for pastures and winter grain. Rye is turning green, but the pastures have not made much progress. Clover and alfalfa were not winterkilled to any great extent. Hay and rough feed was quite plentiful last year so that live stock were carried through the winter in good shape.—H. H. Stuckey.

Door County.—The acreage of rye is larger than it has been for the last two years. The crop wintered in fine condition because of the large amount of snow which protected it. Clover also wintered well, but needs a warm rain. Farmers have begun their spring work; preparation for the oat crop is being made and the acreage will be large. The first year of our cow-testing association has just closed. Most of the members are enthusiastic about it and the work will undoubtedly be continued. Farmers that are feeding good cows are still making a fair profit.—L. E. Birmingham.

Douglas County.—So far there is little complaint with regard to winterkilling of winter rye and new clover. About the usual acreage of potatoes will be planted. Some spring wheat will be sown this year. The weather has been dry, but the ground is working up in fine shape. Live stock wintered well and are selling at good prices. Dairying is our main support, but many are advocating more extensive sheep raising.—D. N. Stone.

Florence County.—It is difficult to estimate the condition of the crops because the frost is not out of the ground and their is also some snow left. Live stock are in good condition and there are no diseases reported in this community, except two cases of glanders among horses.—Phill Kelms.

Iowa County.—Seeding has been delayed by the cold, long, dry spell. Many farmers are afraid that clover winterkilled badly, but some are of the opinion that a good warm rain will bring it up to average. Small grain is being planted at this time. A big acreage of wheat and oats mixed is being planted. The ground works up in fine shape. Cattle wintered well and the cheese factories are opening up early. Conditions in general are very promising.—Art G. Hoskins.

Jackson County.—Winter wheat, rye, clover and alfalfa look fine. Warm weather and rain are needed badly. Wheat seed is very scarce which will cut down the acreage of spring wheat. The soil works up in fine shape and a large part of the oat crop has been sown already. Live stock are not doing very well on account of the high price of feed. cows that did not winter well are apt to fall short in production this summer.—C. S. Ristow.

Juneau County.—Weather has been very cold and dry. Winter grain looks well. Clover is in good shape and all it needs is a warm rain. Spring seeding has started and the ground works fine. The spring pig crop is not large. Few farmers in this county are feeding hogs. Hay is scarce.—C. W. Hale.

Langlade County.—Weather has been fine so far. Winter grain looks good. There is a large demand for spring wheat for seed, but it is hard to get. Many farmers are buying hay at $16 a ton. Potatoes are worth $2.50 and there is only a small stock offered at this price. Cattle were kept in good condition during the winter because the milk flow was maintained and the milk sold to the cheese factory. There are few young pigs at this time. Many farmers are making maple sirup.—Charles Parsons.

Marquette County.—Spring is cold and dry. Clover and winter rye are in fine shape. Even the old clover came through the winter safely. Some farmers are plowing for oats and others have already put the crop in. Hay is selling at from $8 to $18 a ton. All feed is scarce and very high in price. Bran and shorts are worth $2.20 a sack. Farmers have sold off all their potatoes at from $2.50 to $2.60 a bushel. Cattle are very high in price. All live stock are in good health. Farm labor is very scarce.—J. M. Williams.

Oneida County.—Frost is not yet out of the ground and there has been considerable snow. About the usual acreage will be planted to potatoes. Farmers have sufficient seed for their own planting and a few have some for sale. Several litters of early pigs have been farrowed and are doing well. Cattle are in good health, but thin in flesh. A small acreage of rye was sown last fall.—F. S. Campbell.

Portage County.—Clover is in fine shape and looks strong and healthy. A warm rain will start it nicely. Rye is good except on hills where it has been blown off and damaged considerably. Most fields, however, look green and healthy because the heavy snows of the past winter afforded excellent protection from winterkilling. Alfalfa is not grown extensively, but what there is did not suffer from winterkilling. The prospect for all winter crops is about 25 per cent better than the average for the last five years. Live stock are in excellent condition. A considerable number of dairy cattle have been shipped from this section. Oat seeding has just started. Some spring wheat will be sown in this section.—Adthur H. Peterson.

Pierce County.—The weather is rather cold, but spring seeding has started. Rye and clover came through the winter in good shape. This has been an extra good season for maple sirup; the demand is good and the price varies from $1.25 to $1.50 a gallon. Cattle look well, but there is no pasture yet.—G. K. Moore.

Price County.—The season is cold and backward. No plowing has been done. Rye and clover came through the winter without damage. Live stock are in good condition and there is a slight increase in number over former years. Little spring wheat will be sown. Oats and potatoes will be the main crops.—C. F. Glissendorf.

Rusk County.—Live stock are looking fair considering the long, cold winter through which they have just passed. Clover and grasses stood the winter well and there undoubtedly will be a large hay crop. Very little of the new seeding was winterkilled. The number of cattle in the county is about normal. A fair estimate would be about 12,000.—T. M. Thomas.

Sawyer County.—Spring is very late, but this may be a good thing, because when it does warm up we may expect no dangerous frosts. Rye and clover look well and alfalfa is in good condition so far. Live stock are in good health. Farmers will plant large areas to potatoes, corn, beans, peas and similar crops this year in order to guard against the food shortage.—F. O. Setter.

Taylor County.—Spring is backward and very little seeding will be done this month. Rye and clover look well and were not wintrkilled in this section. Live stock came through the winter in good condition. Not all of the snow has disappeared and frost is still in the ground.—J. C. Hoffman.

Washburn County.—Spring is backward, cold and dry. Very little field work has been done. Rye, clover and alfalfa have not suffered from winterkilling, but they have not yet started to grow. The number of dairy cows will be increased this year because farmers are taking greater interest in dairying on account of the farmers' coöperative creamery. Live stock are

(Concluded on page 19.)

AVOID a "leaky" thresher this year. Hire or buy a thresher that will save your grain. A Red River Special will do it. It *beats* out all of the grain. Many owners have threshed out big sacks of grain from straw stacks left by other machines. Hire the man who owns a

Red River Special

or write us and learn about our "Junior" machine. Built in a size that makes home threshing pay. Run it with a gasoline engine, tractor, or light steam engine.

Not to be compared with usual small threshing machines. Has every feature of the Red River Special—famous "Man Behind the Gun"—same arrangement of shakers, adjustable chaffer, and large sieves. **Write for Circulars.**

Make the farm loan include Ideal Heating

The banker knows that radiator heating is an asset

A loan made for improvements which includes radiator heating is much easier to make because the investment in an IDEAL Boiler and AMERICAN Radiators makes the property so much more valuable and adds immensely to the happiness and permanency of the family on the farm. Young and old benefit by it. It is a large dividend-paying investment and soon repays the first cost in a few years. Radiator heating makes any old property modern, healthful, economical and in the "A" class for selling or renting.

Farm success depends upon home comfort

AMERICAN RADIATORS & IDEAL BOILERS

The women folks ought to have a portion of the improvement money spent for their comfort. The success of the farm depends upon the health of your wife and the comfort and convenience of your home. You and your family must be comfortable during the long winter season and the raw, chilly Fall and Spring.

Basement or water pressure not necessary—don't wait!

IDEAL Boiler is set in cellar, side-room or "lean-to;" and same water is used for years. Put an IDEAL Boiler and AMERICAN Radiators in your house this year. Call up the nearest heating contractor and ask him to give you an estimate. Spend part of the Bank loan for this permanent, economical, dividend-paying heating outfit. Thousands of farmers say it's the "best in the world."

Our IDEAL Hot Water Supply Boilers will supply plenty of warm water for home and stock at small cost of few dollars for fuel for season.

A No. 4-22-W IDEAL Boiler and 420 ft. of 38-in AMERICAN Radiators, costing the owner $280, were used to heat this farm house. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which vary according to climatic and other conditions

IDEAL Boiler fuel pots mix the air and coal gases as in a modern gas mantle, extracting ALL the heat from the fuel.

Send today for this valuable book (free)

Our large 48 page book "Ideal Heating" is full of illustrations—will give you much valuable information on the subject of farm house heating. Read it through before buying any kind of a heating outfit.

Sold by all dealers. No exclusive agents.

GET MY PRICES

BEFORE YOU BUY BE sure and get my prices! Before buying a gasoline engine (manure spreader, cream separator or tractor) of any make, or kind, or price, please ask for and read Galloway's 1917 catalog—the biggest, most important book and greatest money-saver for my customers I ever put out! Get my proposition to you and compare it with all others; then be your own judge! We are actual manufacturers and sell direct to you from our factory. We specialize on the lines we offer. We were first to offer engines, separators, spreaders direct from the factory at one small profit. We have made the manufacturing and selling of these lines a life business. You can't afford to buy a gasoline engine or any of the other Galloway lines until you first get our prices and our proposition. Get my price before you buy! Cash or time.

HERE'S THE REAL PROOF!

I can't give it praise enough. I had a 6 h. p. Galloway engine belted to my 16 in. corn mill and it does the work, where an 8 h. p. of another make did not. M. P. SHOEMAKE, DEPSATEO, TENN.

It has not cost me one cent for repairs. Am now buying a 2 1-4 h. p. engine and washing machine for the home. Consider the Galloway simplest engine made. ADOLPH DRINOVSKY, TRAER, IA. I found the 16 h. p. Galloway simplest, most powerful, best governed engine I ever saw and $225 cheaper. HENRY WENHAM, MILTON, WIS.

My 6 h.p. Galloway was 5 yrs. old this fall. Works perfectly—good for 15 yrs. yet. HAROLD W. BARNES, DELPHI, IND.

THE LAKE MILLS

175 HEAD-LAKE MILLS-MAY

John D. Hetts Consignment — **Fort Atkinson, Wis.**

(See Cuts 1, 2, 3, 4.)

We are consigning 18 head, mostly sired by **Juliana King of Rock** and **Juliana King Repeater,** including four yearling daughters of Juliana King of Rock, bred to Juliana King Repeater. Both of these sires are out of **Queen Juliana Dirkje** and by **Mutual Piebe De Kol** and **King Segis Pontiac,** respectively. We also have a **29-lb. yearling son of King Segis Pontiac,** out of the great producing cow, Mutual Lilith of Rock, that has just made nearly 30 lbs.

JOHN D. HETTS — FT. ATKINSON, WIS.

Fred Gurr Consignment — **Lake Mills, Wis.**

(See Cuts 16, 17, 18.)

The illustrations referred to indicate the individuality of our consignment. It is evident these animals have been rightly grown and that they show strong constitutional development.

Specal notice should be taken of the bull calf shown in cut 18. He is not only a perfect individual, but is out of a splendid 24-lb. cow and by Uneeda Korndyke Abigail Boy (102287), a 33-lb. bull.

FRED GURR — LAKE MILLS, WIS.

John Jones Consignment — **Milton Jct., Wis.**

(See Cuts 14, 15.)

The cuts mentioned above will serve to give a very good idea of the individuality the daughters of **Juliana King of Rock** and **Juliana King Repeater** possess, that we are consigning. They are out of **A. R. O. dams with records up to 26 lbs.,** and are granddaughters of **Queen Juliana Dirkje,** that made **1,021 lbs. at 3 yrs.** and **3,000 lbs. butter** in 36 months.

JOHN JONES — MILTON JCT., WIS.

Wm. Trachte Consignment — **Watertown, Wis.**

(See Cut 13.)

We are consigning 3 cows, 9 heifers and 2 bulls. **Eight of the heifers** are by **Duke Johanna Inka (59269),** a 31-lb. bull, and bred to our **30-lb. herd sire,** Longfield Paul Tobes Homestead (185899).

WM. TRACHTE — WATERTOWN, WIS.

DAIRY

Fresh Air in the Dairy Barn.

THE modern dairy barn with its solid walls and tight-fitting doors and windows has brought before the dairyman a new problem. A way must be provided to furnish fresh air for his cows. In the old milking shed with its loose board walls and open cracks that the wind swept through, there was no danger of the cows suffering from foul air, but in the almost air-tight stables which the majority of farmers have today, the health and productivity of the cows may be seriously affected by poor ventilation.

The average cow requires about sixty cubic feet of air per minute. This air is taken into the lungs, where the oxygen is separated from it and absorbed by the blood. Carbon dioxide and other poisonous gases are expelled from the lungs, and when the ventilation is poor these waste gases are breathed over and over. Besides the poisonous effect of these gases, harm is caused by oxygen starvation. When continued for a time this condition causes a weakened constitution and consequently a reduced milk flow. The expelled breath of the animal also contains a high percentage of humidity which tends to saturate the atmosphere with moisture and thereby increase the unhealthfulness of foul air.

The object, therefore, in ventilating is to remove the foul air laden with carbon dioxide and moisture and to introduce fresh air containing a normal amount of oxygen. This must be done without creating cold drafts and reducing the temperature of the barn too much. The ideal condition in the dairy barn is to have both warmth and fresh air. To meet this condition the intakes and outlets for air should be arranged in definite manner with due consideration of the forces which cause movement of air in buildings. These are: First, wind pressure against the sides of the building, which drives air through openings in the walls and thus increases the air pressure within; second, suction of the wind as it passes over an aperture, as illustrated by the draft caused by a wind blowing over a chimney; and, third, the tendency of warm air to rise and cold air to settle.

Figure 1.—Intake flue showing arrangement of inner and outer openings.

By a system of ventilators, these forces may be used to secure a continual circulation of air without chilling the interior of the building. The King system, which is one of the most satisfactory, consists of several intakes built in the outer walls about every ten feet apart, and two or three outlets placed near the middle of the building and extending out at the top like a chimney. If possible the intakes should be on every side of the building so that air may be forced in no matter which direction the wind is from.

In barns with wooden walls the intake flues may be made by utilizing the space between the studding. All that is necessary is to make an opening in the outside wall, as shown in Figure 1, and connect it with another opening in the inside wall near the ceiling of the stable. The inside opening should have a hinged door that may be opened and closed, and the outside opening should be screened over to keep out birds. It might be well also to line the flues with heavy tar paper, which will make them as nearly air-tight as possible. In concrete barns, forms of wood or metal can be made for the flues and put in place while the walls are being built. Similarly, when building brick or stone walls, it would be an easy matter to leave the necessary openings for flues while the material is being laid. In every case the object should be to connect an inside opening near the ceiling of the stable with an outside opening made lower down so that the wind will not get a straight sweep through.

The outlet flues are nothing more than long air shafts, extending from

Figure 2.—Diagram of King system of ventilation with circulation of air indicated by arrows.

within one or two feet of the floor to a short distance above the roof. They are protected above with a revolving cowl or other storm shield. If a simple roof is built over the opening it should be high enough to allow the wind to sweep under. The shafts may be made of galvanized iron, insulated around the part that extends above the roof to prevent the formation of ice and frost on it in winter, or they may be made of well-seasoned lumber and lined with heavy tar paper.

With the King system of ventilation,

A Rare Opportunity

You owe it to yourself to investigate.

For complete particulars, write (mention this paper) to

KOCH V. T. CO.
WINONA, MINN.

the air circulates in the manner shown by the arrows in Figure 2. Wind pressure and the cold temperature outside cause the air to flow through the intakes and enter the stable. The inside air pressure is thereby increased and a flow into the outlet flues begins. This latter movement is aided by the tendency of the warmer air of the stable to rise until it passes out of the flue at the top. At the same time the suction caused by the wind blowing over the top of the flue causes an upward flow of air and makes the rate of circulation more rapid.

In summertime, and especially when the wind is still, the greatest factor in air movement is the tendency of warm air to rise and cold air to settle, and, therefore, at this time it is of advantage to have a hinged door in the outlet shaft near the ceiling as shown in Figure 2. This door may be opened in sultry weather to allow an escape for the warm air as it rises to the ceiling. But in winter when warmth is desired the door should be kept shut, so that the ceiling will reflect the warm air and cause the cooler air near the floor to pass out through the flue.

The size of the flues will depend upon the number of cows in the barn. Under normal conditions, a cow will require sixty cubic feet of air per minute, and twenty cows will need twenty times this or 1,200 cubic feet. Since an opening one foot square will allow a passage of 300 cubic feet of air per minute without creating a disagreeable draft, an outlet shaft two feet square would be the proper size for ventilating a barn containing twenty cows. One outlet would be sufficient in this case, but there should be several intakes, in order that the circulation of air will reach all parts of the barn. In this instance, about twenty intakes, with openings of approximately thirty-six square inches each, would admit the necessary flow of air, or if the openings were made larger a smaller number would be sufficient.

Fewer But Better Cows Needed.

In Steele county, Minnesota, forty-five cows—15 per cent of 300 belonging to a cow-testing association—produced an average of 1,548 pounds of milk and 43.15 pounds butter fat per head during the month of January. The butter fat, sold at a coöperative creamery, brought an average price of 47 cents a pound, thus yielding an income of $24.98 per cow during that month. The cost of the feed for these cows, according to market prices then prevailing, was $10.58 per head, so there was a net profit of $14.40 per head. In other words, for every dollar's worth of feed consumed these cows returned $2.35 in butter fat.

It is cows of that kind that make dairying profitable. Better own ten such producers than thirty average individuals that would produce no more, but eat nearly three times as much as the better ones. The better cows not only yield a much larger net profit, but the labor required to take care of them is also much less. The good cows in a herd can be detected by testing and weighing the milk of each. Buy a Babcock test and a scale, or join a cow-testing association, and begin separating the boarders from the profitable producers.

Milking Machine More Sanitary.

To the Editor:—I think the milking machine is more sanitary than hand milking and the cows take to it readily. By being careful on the start, after the cows become acquainted with the machine they seem to like it much better than hand milking.

The machine is easily cleaned if done immediately after milking by running or syphoning cold water through the tubes, then washing with hot water and some good preparation. After washing, the tubes are placed in sterilized water. That takes care of them until the next milking.

A man should have at least twelve cows to justify buying a milking machine and twenty is better. A man and boy can milk twenty cows and feed the calves in one hour with one-half the labor of hand milking. When a man installs a milking machine he soon doubles his herd, as a few more with the machine cuts no figure, but when he milks by hand he naturally keeps cutting down on the herd. I would much rather milk twenty cows with the machine than ten by hand.

Buena Vista Co., Ia. J. M. Hussey.

Heavy shipments from Texas soon will relieve the country-wide shortage of onions and send prices down, the department of agriculture announced. Within the last few days Texas has begun to supply the country with more than 100 cars of onions daily. The crop is two weeks later this season than usual, but 20 per cent larger than last season.

Geneva Association.

To the Editor:—The following is our forty-five pound cow list for the month ending February 28th:

Owner, name and breed	Age	When fresh	Pounds milk	Per cent of fat	Pounds B. fat
A. G. Palmer & Sons					
Netherland, R. H.	3	1-6-17	1663	4.1	68.2

Guaranteed to do more and better work with less power

than any other; yet it *costs* no more to buy. Practically proof against breakdown. Solid oak and steel frame, mortised, bolted, braced; impossible to pull out of line.

Spiraled knives give clean shearing cut, requiring least power. 10 lengths of cut (5/16 to 2¼ in.). Frictionless self-feed table runs on chilled iron rollers. Speed of blower adjustable to least use of power for any height silo. One lever controls feed rolls and table. Automatic safety device.

APPLETON Silo Filler

Send for two free books!

Silo book and Appleton Silo Filler catalog. Appleton Mfg.Co., 4122 Fargo St., Batavia, Ill.

THE INDIANA SILO

Fifty thousand are now in use on the finest farms in America.

If you are going to buy a silo—this satisfactory service rendered everywhere—should be of special interest to you.

The cost of all materials is advancing like the price of wheat and corn.

Why not save money by contracting for your silo now. It undoubtedly will cost you more next spring or summer.

Let us send you our proposition—to contract now for your silo and deliver it later.

We still have openings for a limited number of farmer agents.

Care of the Growing Child's Teeth.

By the end of the second year the baby should have his milk teeth complete and until the sixth or seventh year, when the permanent set will begin to appear, these teeth must serve all the purposes that the final set will serve later. Since this is the time the child is learning to chew his food, a process necessary not only for proper digestion but for the strengthening and developing of his jaws and for the proper growth of the permanent teeth, it is important to keep the first teeth in the best possible working order. The condition of the teeth is a fair index to the general health of the child.

Until the child is old enough to use a toothbrush himself, the mother should wash his teeth every day; but as early as possible the child should learn to care for his own teeth. If the teeth cannot conveniently be cleaned after each meal, the mouth may at least be rinsed. Children should be taught that it is of special importance to wash the teeth and mouth after eating nuts, or any sweet, sticky or pasty food. The teeth should be carefully cleaned at bedtime, since the fermentation of food particles left in the mouth, which leads to the decay of the teeth, proceeds more rapidly at night, when the mouth is still.

The child should be taught to brush the teeth from the gum downward or upward toward the cutting edge. When the teeth are brushed crosswise, the tendency is to push whatever is on them into the cracks and crevices of the teeth or under the edges of the gums. The inner surfaces of the teeth should also be brushed up and down, and the grinding surfaces should be scrubbed in all directions: after the scrubbing is finished the mouth should be thoroughly rinsed with warm water.

Some hard food like a stalk of celery or part of a ripe, juicy apple eaten at the end of a meal scours the surface of the teeth and leaves a fresh, clean taste in the mouth.

Children should be taken regularly to a good dentist once or twice a year after the first set of teeth is complete. If cavities appear they should be filled with soft fillings, and each tooth should be saved as long as possible. If the temporary molars are extracted before the sixth-year molars come in, the latter will be apt to crowd forward into the space left vacant, and when the later teeth come they will be pushed out of their regular places, destroying the natural line of the mouth. The first molars furnish the grinding surfaces necessary to proper chewing of the food. If they fall out too soon the child is hardly able to chew hard or tough food, and is likely to swallow such food in chunks.

The care of the child's first teeth is important also because the health of the permanent set is largely dependent upon that of the first set. The second teeth are much larger than the first and consequently need more room in the gum. For necessary development the jaws must be given plenty of exercise. Consequently the child should have a mixed diet, including some hard food which he cannot swallow without chewing. Toast, crusts, hard crackers, certain fruits like apples, salad, vegetables and meats should provide the food elements needed for healthy teeth if the child is thriving.—[Children's Bureau.

Clothes Moths.

The first tiny, yellowish moth that the housekeeper sees flitting about the lamp at night is a signal for her to marshal her forces for war against this destructive household pest. While these moths themselves do not eat anything, they are even now beginning the work of destruction by laying eggs which in a month or so will develop into tiny caterpillars, and these caterpillars or larvae, working underneath scanty webs or in little cases made from particles of the garments on which they feed webbed together by a whitish silk, work havoc with woolens and furs. The clothes moth of this country is the webbing species and its presence on garments can be detected by this whitish web. This web is noticeable even before the garments have been much eaten and if, therefore, they are discovered in time, a thorough brushing with a stiff brush will remove the larvae and save the garment from serious damage.

It pays to be eternally on the watch for these pests. Keep store rooms and closets free from an accumulation of dust. Such woolens, furs, etc., as are to be packed away for the summer should be taken care of as early as possible in the spring. Before being packed away such articles should be thoroughly brushed and beaten and, if possible, exposed to the strong sunlight for several hours out of doors. The brushing is very important in order to remove the eggs or young larvae which may have escaped notice. Materials which cannot be put away should be given the same thorough cleaning and inspection at frequent intervals during the summer, preferably every two weeks.

After being so brushed, cleaned and sunned the articles may be packed away safely for the summer by enclosing them in several wrappings of paper or in well-made bags of cotton or linen cloth or in paper sacks which can be tied or otherwise securely fastened, to prevent ingress of the moths. In these packages can be placed such repellents as tobacco dust, camphor, naphthalene cones or balls, and cedar chips, etc. The odors of these substances are disagreeable to the parent moths and act as a repellent, but they will not kill eggs or larvae which may be enclosed in the packages. Hence the necessity of the thoroughgoing cleaning and airing prior to packing away. The same precautions are needed with cedar chests and wardrobes.

Articles in daily or weekly use, and apartments frequently aired and swept or used as living rooms, are not to be seriously attacked. There is a risk, however, that even under these conditions attached carpets may be eaten around the border where the insects are not so much disturbed by walking and sweeping, and particular attention should be given to the border areas. Loose rugs are much less apt to be injured, but it is a good plan during the summer, if these are allowed to remain on the floor, to turn them over and thoroughly sweep or brush the under surface once every two or three weeks.

Never Had a Spoiled Can.

To the Editor:—I noticed where a Mrs. J. S. wants to know how to can peas for winter use. I get so much help from this page that I want to help someone else.

The peas should be picked when they have reached the size that is best for table use. Do not use them after they begin to get hard. The peas should be picked in the morning when they are cool and if the pods are dirty they should be washed before being shelled. Shell directly into pint jars which have been thoroughly washed and half filled with boiled water. Let the water get cool before putting in the peas. When the jar is filled add a half teaspoonful of salt. The rubber ring is then put in position and the lid partially screwed on. When all the peas are ready the jars are set in the boiler and cold water poured in until almost up to the rubber on the jar. The lid is then put on the boiler and the fire started. I like an oil stove best, as the heat is more even. Here is the secret of success in canning peas. The boiling is continued for two and one-half hours from the time the water first begins to boil. A shorter time than this means incomplete sterilization and consequently a failure in this vegetable. Where quart jars are used three hours of continuous boiling is necessary. As soon as the time is up lift the jars from the boiling water and immediately screw down the lid perfectly tight. I have never had a pint of peas to spoil when canned this way. My friends have tried it and think it fine. When cold put in a cool, dark place. Mrs. C. D.

Sweet Spiced Cucumber Pickles.

To the Editor:—In answer to a request from one of our readers for sweet spiced cucumber pickles, I am sending my recipe, which we think is a splendid one.

Gather the cucumbers in the morning; carefully wash them, pour boiling water over them and let soak overnight. In the morning let come to a boil in vinegar which has been diluted with water. Then drain, pack in jars and pour over them the following mixture, which should be boiled: One cupful of sugar, one cupful of water, one cupful of vinegar, one tablespoonful mixed spice, one teaspoonful alum.

I prepare each morning's cucumbers as I gather them, and in that way they keep their dark color and are also very brittle and nice. Mrs. C. J. W.

Uses Seed Corn For Hominy.

To the Editor:—In looking over the Home department I saw one or two requests which I think I can answer satisfactorily. One lady says that she cannot get the black ends off her hominy. I think the trouble is that she either does not cook it long enough in the lye or the lye is not strong enough, also the corn must be perfectly dry. Flint corn is the best for hominy. I generally use some of the seed corn or else dry the corn in a slow oven for a while. I never could get the black spots off by using corn just taken from the crib. If this lady uses perfectly dry corn and then proceeds in the usual manner I think she will have no more trouble.

If the reader who has trouble with her soap will follow the directions on the lye can I think her soap will be all right, and even if it is not so white I don't think it will affect the quality. Mrs. E. L. Price.

Spiced Cucumbers.

To the Editor:—The following is my recipe for spiced cucumber pickles, recently asked for by one of our number. We think this recipe is fine.

To one peck of cucumbers take a pint of coarse salt and make brine sufficient to cover cucumbers, pouring it on boiling hot. Let stand twenty-four hours, drain, repeat twice again using fresh brine each time and allowing twenty-four hours before each change. The fourth day drain brine off, cover with boiling water and let stand another day. When cucumbers are well filled out pack in jar, place among them small bags of whole allspice, cloves and cinnamon, with pieces of horseradish scattered through pickles. Heat vinegar boiling hot and pour over them. When cold cover with horseradish leaves.

This is not so much of a bother as it looks and the results will justify all the pains you take. Mrs. T. W. H.

THE YOUNG FOLKS

All letters from boys and girls to this department should be sent to office of The Wisconsin Farmer, Madison, Wisconsin.

Helps Make Mamma Happy.

Dear Young Folks:—I would like to join the Young Folks. I am eleven years old and live on a farm of 240 acres. I have three sisters and four brothers.

I help my mother with her work. I get the cobs, set the table, sweep the floor and do lots of other things to make mamma happy.

I go to school every day and am in the fifth grade. Our school was out the 19th of April. We had a program, consisting of six dialogues, six songs and seventeen pieces spoken by the children.

One Sunday last fall I went to church and then went home with my cousins. We ate dinner and then went to the Mission Feast. There were about 1,000 people there. They had it in a large grove over a mile long. They had stands and tents. We stayed until evening and had a very nice time.—Elsie.

Fun With the Pets.

Dear Young Folks:—I am a boy eleven years old and live on a 310-acre farm. One night about five o'clock I went to hunt my eggs and when I went down the sidewalk to the chicken house I heard a voice of a lamb. So I hurried down to the sheep stable and there were two lambs. The next Sunday morning when I got to the barn my brother said to me, "Did you see the other two little lambs?" I said I hadn't and I was surprised when I got to the stable, because there were two more little lambs. I wish that some of the boys and girls would tell me some names for my lambs. I can't decide on names for them. —Arnold.

Two Robins.

Dear Young Folks:—Once when I was looking out of the window I saw two robins. The father bird was sitting up on a branch. He and his mate were making a nest and the father bird was guarding it while the mother bird was off in the fields gathering sticks and strings to finish the nest. When she came back and was working on the nest the father bird went off to get some more sticks and strings. He came back with three sticks and four strings and when they had finished the nest the two mates flew off to find their supper. —Malda.

Gets a Hundred Eggs a Day.

Dear Young Folks:—I am a boy fourteen years old and live on a farm of 102 acres. I have three brothers and two sisters.

I am in the eighth grade. There are thirty children going to our school and we play ball and marbles every day.

I have seen many robins and meadow larks already this year.

My father has about 200 Leghorn chickens, and we get about a hundred eggs every night. The most we have got at night this year was 117.

My father and mother have a gasoline engine to do the washing, and a mangle to iron with. We have four cows to milk. My brother and I do the milking every night. We have five calves and we used to ride the calves all over the farm.

We have a Ford automobile. We have had it four years and have only run it 4,000 miles. Gaylord

OUR FASHION DEPARTMENT.

ALL PATTERNS 10 CENTS EACH

WE CAN supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10c each postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering give correct number and size. Inclose 10c for each pattern.

Send 10c in silver or stamps for our up-to-date 1917 spring and summer catalog, containing over 550 designs of ladies', misses', and children's patterns, also some points for the needle. Address all orders for patterns and catalogs to WISCONSIN FARMER, Madison, Wisconsin.

2038—Girls' dress, with sleeve in either of two lengths. Pattern is cut in 4 sizes: 2, 4, 6 and 8 years. It requires 2⅝ yards of 36-inch material for a 2-year size.

2054—Ladies' house dress, with sleeve in wrist or elbow length. Pattern is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 5¾ yards of 44-inch material for a 36-inch size.

2059—A charming negligee. Pattern is cut in 4 sizes: Small for 32 and 34 inches bust measure, medium for 36 and 38 inches bust measure, large for 40 and 42 inches bust measure, and extra large for 44 and 46 inches bust measure. The medium size will require 6½ yards of 36-inch material.

2039—Girls' dress to be slipped over the head. Pattern is cut in 5 sizes: 8, 10, 12, 14 and 16 years. It requires 3⅛ yards of 44-inch material for a 12-year size.

1854—An attractive apron model. Pattern is cut in 3 sizes: Small, medium and large. It requires 4½ yards of 36-inch material for a medium size.

1609—Girls' dress, with or without Bolero, with sleeve in either of two lengths. Pattern is cut in 4 sizes: 4, 6, 8 and 10 years. It requires 3⅜ yards of 44-inch material for a 6-year size.

1762—A practical ladies' apron. Pattern is cut in 3 sizes: Small, medium and large. It requires 6¾ yards of 36-inch material for a medium size.

Waist 2037-Skirt 2060—A pleasing dress for home, business or calling. Waist 2037 is cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 3 yards of 44-inch material for a 36-inch size. The skirt 2060 is cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. For the skirt of the same width material, 4⅜ yards will be required. Two separate patterns, 10 cents for each pattern.

2051—Boys' Russian suit. Pattern is cut in 4 sizes: 3, 4, 5 and 6 years. It requires 2½ yards of 44-inch material for a 5-year size.

1899—Ladies' waist, with bodice belt. Pattern is cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. It requires 2¾ yards of 36-inch material for a 36-inch size.

2057—Girls' one-piece dress with guimpe. Pattern is cut in 5 sizes: 6, 8, 10, 12 and 14 years. It requires 1¾ yards of 27-inch material for the guimpe, and 4¼ yards for the dress, for a 12-year size.

Waist 1874-Skirt 1869—A splendid gown for many occasions. Waist pattern 1874 cut in 6 sizes: 32, 34, 36, 38, 40 and 42 inches bust measure. The skirt 1869 cut in 6 sizes: 20, 22, 24, 26, 28 and 30 inches waist measure. It requires 8⅜ yards of 36-inch material for a medium size, for the entire dress. Two separate patterns, 10 cents for each pattern.

International Sunday School Lesson

(By E. O. SELLERS, Acting Director of Sunday School Course.)

Lesson for April 29, 1917.

Jesus Welcomed as King.

LESSON TEXT—John 12:12-19.

GOLDEN TEXT—Blessed is the King of Israel that cometh in the name of the Lord.—John 12-13.

This lesson marks the beginning of that last tragic week in the life of our Lord, the most important week in all history since creation. The date was probably April 1, A. D. 30.

I. The Lesson of His Kinship. (vv. 12-16). Reading carefully the record of each evangelist, regarding this triumphal entry, we are still at a loss fully to describe the scene. It occurred the day following the supper in the home of Mary and Martha and Lazarus, i. e. on the Jewish Sabbath. From Bethphage Jesus sent two of his disciples into Jerusalem to secure the colt. They were to loose him without asking anyone's permission, and bring the ass and her colt to him to whom all things belong, with no other explanation than, "The Lord hath need of them" (Matt. 21:3). This command was in line with the prophecy (Zech. 9:9). The young ass was a symbol of peace, but the going of the disciples, in obedience to his command, was an act of faith, and obedience in the supreme test of discipleship (John 15.14). In response to their faith, they found everything just as he said it would be (Luke 19:32). Placing their garments upon the colt (Matt. 21:7) Jesus rode upon it toward the city, the people crying, "Hosanna"—literally, "Save, I beseech" (Ps. 19:37-40; see Luke 19:38; Mk. 11:9-10; Matt. 21:9). The enthusiasm of the moment was tremendous. For the moment this great crowd (Mk. 11:8) believed that Jesus was really the Messiah, they threw the garments of their holiday attire in his way (Matt. 21:8), and cast their palm branches before him. The Pharisees protested (Luke 19:39-40), but the enemies of Jesus for the moment were impotent (John 12:19). The Pharisees forgot their dignity to such an extent as to get excited along with the multitude, though with another purpose (See Luke 19:37-40). Unfortunately the enthusiasm of the people was not long-lived. Many of the same ones were soon crying, "Crucify him" (Ch. 19:14-15). Jesus himself did not join in the general joy (Luke 19:41-44), for he, with prophetic eye, saw the outcome (Luke 19:41-44).

II. The Lesson of Reverence (vv. 17-19.) It is one thing to acknowledge Jesus as a King. It is quite another to revere him as Lord and Savior. Never was there a time when we need more to have reverence for things holy and for constituted authority than the present day. The act of reverence on the part of this multitude for the God-anointed King ought to be a suggestion to those who look upon Jesus merely as a man.

Ride triumphantly;
Behold we lay
Our lusts and proud wills in Thy way.

Jesus' grief is in strange contrast with the joy of the multitude. The practical application for us today is: "Have we cast our talents before him, God's rightfully anointed King?" There had been a large company of people present when Jesus was at the tomb of Lazarus and raised him from the dead. The testimony of these eyewitnesses to the power of Jesus must have had great weight with the multitude. The enthusiasm of this crowd for Jesus excited the hatred of the Pharisees, making it all the more intense, for they saw the crowd forsaking them, and following one whom they envied and hated. To one another they exclaimed, "Behold, how ye prevail nothing." Notice the personal pronoun "ye," seeking to lay the fault upon others rather than taking their own share of the burden, another touch of human nature which is evident even today.

III. The Lesson of the Greek Pilgrims (vv. 20-26). These Greeks came first to Philip, who himself was a Greek. The hour had come (v. 23) when the work of Jesus for the Jews was to be finished. The Jews had been threatened with Greek religion, and that assault had been stopped by the Pharisees. Christ came first to the Jews that through them he might teach the Gentiles. Now his work for the Jews is done. He rejoices as he sees the Greeks coming to him, for it was to be in Greek dress and in Greek form of expression that Christianity was to conquer the world. But this rejoicing is tinged with sorrow, for it was a prophecy of the price that he must pay for the redemption of the world.

The Son of Man was glorified by his death; he was glorified by his reception on the part of the Gentiles; he was glorified by the approval of the father.

Verse 24 expresses one of the most tremendous facts in the life of Jesus (Cf. I Cor. 15:36).

Think of the rich fruits of Christ's death, the countless lives that he reached and ennobled, and the effect of his life on the practical affairs of the world, the hospitals and every movement for the advancement and the well-being of mankind which can be traced to the influence of his life.

Barron County Potato Work.

(Continued from page 1.)

mate treatment, consisting of four ounces of corrosive sublimate in thirty gallons of water. The seed stock is allowed to soak in this solution for one and one-half hours and each mixture is good for four batches. Not more than four lots should be treated with the same mixture, however, as the dirt weakens the chemical. During the coming summer, hill selection of seed will also be practiced, in order to obtain the very best seed for 1918.

The associations hold monthly meetings, at which they discuss better methods and any problems that might be of interest during the time of year. The Cedar Lake Potato Growers' Association recently combined its monthly session with a sort of get-together meeting and an enjoyable program and banquet was held.

Innumerable ways of improving social and business conditions have been opened up through this first move of these associations; and the results are already at hand. Nine associations have broadened out and applied their energies towards enterprises which to them are as important as potato growing. Shipping associations have been formed in Hillsdale, Barron, Almena, Ridgeland, Dallas, Hoskins, Turtle Lake and Canton. Some of these associations started with only a few members, but their growth has been remarkable in many instances. The Hillsdale association is a typical example of this. A month ago this community organized their live stock shipping association with twenty-five charter members. Today 168 farmers belong to it. They have handled in one month over $29,000 worth of live stock.

Coöperative buying is also becoming popular in Barron county. The Cedar Lake potato growers are purchasing their material for spraying coöperatively and receiving it at a lower cost because of this. It is planned to purchase dairy feeds during the coming winter on the same basis. Other associations have similar plans in mind. The demonstration that their potato work has given them is directly responsible for this. There is plenty of work for Mr. Cuff in Barron county. Over 4,000 farms are located in the county and only one-fourth of these have organized in one way or another for the development of better crops. Mr. Cuff is not so anxious to increase the acre yield as he is to save the yields of an acre. The loss annually from diseased seed stock, blight, tip burn and sun scald is considerable in every potato section. Where these have been eliminated a big step has been made toward greater production.

Certified growers are gaining in number in Barron county. There are now seven members already growing certified seed and over twenty applications for certificates have been made this year. The certified seed commands a higher price on the market because it has behind it the guarantee of inspection and supervision. The extra work and care required to produce good seed and meet the standards is well repaid when the seed is marketed.

Upper Wisconsin.

MR. GRIFFITH RICHARDS has resigned as county agricultural agent in Price county and accepted a similar position in Kenosha county. Mr. Forest Sargent, until recently manager of the Dr. Chas. Mayo farm near Rochester, Minn., has been chosen to succeed Mr. Richards.

MR. A. G. SEARING, of the Zenith Farm, Ashland Junction, Wis., writes The Wisconsin Farmer concerning some of the excellent work which has been done in Upper Wisconsin under the direction of Prof. E. F. Delwiche. He says: "When Professor Delwiche came up north pedigreed grain, pure-bred cattle, drainage, care and management of soils and crops were little heard of in this section. Today everyone has high-grade stock or hopes to have it, also pure-bred grains, and they are beginning to learn how to handle and take care of these. The further we get along in this work the more complicated it gets and the less we find that we really know, and this is where we are fortunate in having our obliging friend, Professor Delwiche, handy to help us and advise with us. When I first started in here twelve years ago I was plowing this heavy clay soil around and around with never a thought of draining it. I was doing the same way my grandad did years ago, back in New Jersey. Along comes the professor and sets me right and oh, my! what a difference it makes. I am just beginning to learn the first principles of taking care of oats and all I know along this line I owe to Professor Delwiche and our state experiment association."

RUSK county dairymen have recently organized the Marshall Dairymen's Association and through this organization are beginning the work of building a cheese factory on a site about three and one-half miles south of Conrath. The building will be completed about May 1st if present plans are carried out. The surrounding territory is especially favorable to the dairy industry and if the farmers coöperate fully in the undertaking, complete success should be forthcoming. The officers of the association are: Nick Engleman, president; John Rausch, vice president, and Cornell Elkow, secretary-treasurer. W. C. Kono, an experienced cheesemaker, will operate the factory.

TO the Editor:—The Lake Superior Holstein Breeders' Association held their annual meeting at the city hall, Ashland, Wis., April 4, 1917. County Representative Post was present by invitation and addressed the meeting upon the merits of the Holstein cow. It was voted that the association offer a prize consisting of a silver cup or tray for the best exhibit of Holstein-Friesian cattle by its members, at the Ashland County Fair the fall of 1917, cattle to be judged by the regular judges employed by the Ashland County Agricultural Society. Considerable interest has already been worked up in competition for this prize, and other prizes to be offered by the county fair association.

D. W. Emerson, Ashland Co.

THE So. St. Paul Live Stock Exchange has decided to hold a stock and feeder show at South St. Paul, September 20th and 21st. Over $3,000 will be given away in prizes. To accommodate the several sections which will be interested in this event the territories will be divided as follows: On cattle Group 1, eastern territory will include Wisconsin, northern Michigan and Minnesota; Group 2, central territory, will include North and South Dakota, and Group 3, western territory, will include Montana, Wyoming and Idaho. The division of sheep classes will be Group 1, native sheep, those from Wisconsin, northern Michigan and Minnesota being eligible. Group 2, feeder sheep, open classes, entries to be accepted from North and South Dakota, Montana, Wyoming, Colorado and Idaho. On September 21st, the last day of the show, there will be an auction sale of show cattle and sheep.

ONE of the first things for the settler to plant is his vegetable garden. A considerable part of the home food supply can be produced there. The land should be carefully plowed, and, if possible, given a dressing of manure or nitrate fertilizer. Hardy garden seeds should be planted as soon as the ground is thawed out enough to work well. Lettuce, peas, beets, carrots, onions and spinach belong to the early list. Sweet corn, wax and navy beans, cucumbers, squash and pumpkins follow in June. When land is broken in the early spring, with the intention of putting in a crop at once, it is well to use the disk immediately after the plow. A good way is to plow during the forenoon and then fit this land during the afternoon. Sod should never be left face up, as the grass will crowd out the tame plants sown later. Settlers must find out what crops will give best results. Such information, as well as facts regarding the buying of good seed of all kinds, will be furnished by the experiment stations or from county agricultural representatives. Although potatoes are undoubtedly one of the best crops for soils of a sandy or loamy nature, it is well not to plant too large an acreage at the expense of growing feed for live stock or the production of other food crops. Cabbage, rutabagas and turnips are good crops to grow on the heavy loams and clays and often give better satisfaction to new settlers than potatoes. The thrifty plans of Drumhead, Danish, Ballhead and red make good winter cabbage, while the Early Wakefield is excellent for late summer use. There is a steady demand for rutabagas in northern Wisconsin, and they grow well on new land and are not hard to raise. Mr. Delwiche gives a list of approved varieties of crops which have been proved by exceedingly careful trials to be safe for planting in northern latitudes and on new soil. Here are a few of them: Barley—Pedigree Nos. 5, 9 and 11 of the six-rowed type. Oats—Pedigrees Nos. 1, 3, 4 and 5. Rye—No. 1. Wheat—(Winter) Pedigree 208, Kharkoff and 408 Basca; (spring) Marquis, Blue stem and Red Fife. Peas—Golden Vine, Green, Scotch, Marrowfat. Soy beans—Early Black. Potatoes—Rural New Yorker, Burbank and Green Mountain; for early crops, Early Rose, Early Ohio and Triumph. Rutabagas—Purple Top and Monarch. Mangels—Golden Tankard, Mammoth Long Red and Half Sugar. Turnips—Yellow Aberdeen, Purple Top and Strap Leaved.

Canada Offers 160 Acres Land Free to Farm Hands

Bonus of Western Canada Land to Men Who Assist in Maintaining Needed Grain Production

The demand for farm labor in Canada is so great that as an inducement to secure at once the necessary help required, Canada will **give one hundred and sixty acres of land free as a homestead** and allow the farm laborer, who files on land, to apply the time he is working for other farmers as residence duties the same as if he had lived on the land he had applied for. This offer made onl yto men working on Canadian farms for at least 6 months during 1917, thus reducing the necessity of actual residence to 2 years instead of 3 years, as under usual conditions. This appeal for farm help is no way connected with enlistment for military service, but solely to secure farm laborers to increase agricultural output. A wonderful opportunity to earn good wages while securing a farm. Canadian Government will pay all far over one-cent per mile from St. Paul and Duluth to Canadian destination. Information as to low railway rates, etc., may be had on application to

GEORGE A. HALL

Clearing House For Seeds.

To the Editor:—In order to help farmers secure seeds, the state department of agriculture has been made the clearing house for locating supplies of seeds, and putting those desiring seeds in touch with the sources. Farmers and dealers who have seeds for sale are urged to send the state department information as to the amounts, varieties and prices. Such information should be sent in at the earliest possible date.

Persons desiring aid in locating supplies of seed are also invited to make application to the state department.

The department wishes to urge farmers and others who have supplies of seeds of various kinds on hand, and also those who wish to buy seeds, to advertise the same in their local papers, so that the buyers and sellers may get together locally. The local paper can be of no greater service than to insert such notices and run a regular marketing department.

The department now has option on the main supplies of potatoes in the state, for one week, also upon a large supply of navy beans. All orders for the above mentioned seeds should be accompanied by a draft made out to the commissioner of agriculture for the amounts based on $3 per bushel for potatoes and $10 per bushel for beans.

The department wishes to state most emphatically the fact that hardly any first-class seed potatoes are available at the present time. Parties wishing seeds must be satisfied with taking the best lots of common market potatoes.

The state department of agriculture feels that it is much safer and wiser to place the most prominent emphasis upon increased acreage of corn, beans and buckwheat rather than potatoes.

C. P. Norgord, Commissioner of Agriculture.

From the Holstein Association.

To the Editor:—I am advised through preliminary reports and by wire that the Holstein-Friesian cow, K. K. S. V. Topsy 220088, has shown a production of 568.4 pounds of milk, containing 32.05 pounds of fat in seven days with the test still in progress. She freshened at the age of three years, eleven months and twenty-four days. Her sire is King Korndyke Sadie Vale 86215; her dam 's King Segis De Kol Korndyke Topsy 146246. She was bred and is now owned by Mr. Quentin McAdam, of Waterville, N. Y. If computed on the 80 per cent basis, the equivalent butter production so far claimed for K. K. S. V. Topsy would amount to 40.06 pounds.

Malcolm H. Gardner,
Supt. A. R., Delavan, Wis.

Badger Crops Wintered Well.

(Continued from page 11.)

looking well. Feed is scarce and high priced.—L. D. Garnhart.

Waukesha County.—Spring has been backward, but some seeding has already been done. Some spring wheat may be sown this year. Feed for dairy cows has been very high and many herds have been poorly fed. Breeders of pure-bred stock are getting high prices for their animals. Buyers from other states have been at work here.—W. J. Main.

Wood County.—Heavy snows have protected the rye and clover and a little rain will put these crops in fine shape. They have already started to grow, but the ground is getting too dry. Farmers are preparing to put in the oat crop, but few will sow spring wheat. Fat live stock have all been sold. Considering the long cold winter cattle are in fair shape. There are very few hogs. Young pigs have been selling at from $12 to $15 a pair.—Fred E. Weber.

Government Report for State.—Fall-sown rye and winter wheat in Wisconsin have come through the winter in excellent shape and present prospects are very promising. The next week or ten days should put these crops out of danger from the alternate freezing and thawing weather. The ground in the counties where most of our rye and winter wheat is grown has been well covered with snow since December, and as a result the frost did not penetrate deeply, in many places not over six inches. The heavy snow covering, with the absence of ice on the fields produced almost ideal conditions for the fall-sown crops. Apparently the clover crop has also come through so far without any serious winterkilling. With the high price of pork, the temptation to market breeding stock has been strong, but the reports from all over the state indicate that but few farmers have sacrified many of their breeding sows and in some counties there is an increase. During 1916 the farmers of Wisconsin shipped to the primary markets over 1,600,000 hogs. This represented about three-fourths of the total number of hogs slaughtered and is considerably less than the number shipped in 1915. The general health conditions of stock of all kinds throughout the state is fully up to average.—W. F. Callander.

50 New Varieties of Potatoes

can easily be grown from one Package of my Genuine Hybridized Potato Seeds. Every hill will bring a different variety of Potatoes.

All valuable new sorts are produced from just such seed. One may make your fortune. Here is the chance of a lifetime—and your last chance—to get the rarest and most wonderful of Seeds. Order at once. Don't Starve Your Car—Feed It Well—With POLARINE

Give it all the lubrication it will take. Keep the foundation full of POLARINE. Turn down your grease caps very frequently. Change the motor oil every thousand miles.

That may read like extravagance—but it is the only sure way to operate a car economically. You will add thousands of miles to the life of your car and power to your motor.

Your repair bill for burned-out bearings will be little or nothing.

When you want to sell it you will have a smooth running, quiet motor.

Use Polarine FRICTION REDUCING MOTOR OIL

For Correct Lubrication

Any make car at any motor speed or temperature.

Under driving conditions where temperature of cylinder walls ranges from 300 to 400 degrees Fahrenheit, the viscosity of POLARINE is practically identical in body with the so called "heavy" oils.

POLARINE maintains its efficiency at working temperature longer than most other oils. Order a half barrel today. It costs less that way than in smaller quantities.

Lake Mills Holstein Sale.

AT the Lake Mills Holstein sale (see advertisement in the center pages of this issue), there will be an opportunity to select from 175 head of richly-bred Holsteins, possessing individuality and A. R. O. backing that is seldom equaled in a consignment sale. The fact that the Lake Mills sales have a reputation for clean management, merits the confidence of buyers desiring to purchase good stock. We have had an opportunity to inspect most of the consignments which we do not hesitate to recommend to the public. Most of the animals are in good condition and reiterate the statement that there will be an unusually large number of animals possessing superb individuality. The following is a brief review of some of the chief points of interest concerning some of the consignments to be represented at this sale. John D. Hetts, of Fort Atkinson, is consigning 18 head, mostly sired by Juliana King of Rock and Juliana King Repeater. The former is by Mutual Piebe De Kol and the latter by King Segis Pontiac and both are out of the famous cow, Queen Juliana Dirkje, that produced over 1,000 pounds of butter as a three year old and 3,000 pounds butter in three years. Mr. Hetts is also consigning a 29-pound yearling son of King Segis Pontiac and out of Mutual Lilith of Rock (194953) that has just completed a 29-pound record and is a good prospect for a much larger performance. The "Alfakorn Dairy," proprietors F. B. Green & Son, Evansville, Wis., are consigning a 24-pound four-year-old cow bred to their 33-pound bull sired by Emmons Blaine's 29-pound bull, Canary Homestead Oak De Kol and out of the 33.48-pound cow, Windsor Sweet Butter Maid, that is generally looked upon at the Lake Mills district as being a splendid prospect for 35 pounds. She is a remarkable cow and has transmitted most of her best points of individuality to her son, the Alfakorn senior herd sire, that is bred to a choice lot of yearling heifers, consigned by F. B. Green & Son. They are also entering two good grandsons of Findern Pride Johanna Rue, out of A. R. O. dams.—Adv.

Lake Mills Consignments.

FRED GURR, Lake Mills, Wis., is consigning some of the best individuals for the Lake Mills Holstein sale, May 8th and 9th, including three granddaughters of King Segis Pontiac. These heifers are remarkably well developed, possessing ideal lines and dairy conformation. To verify this statement look up cuts 16 and 17 in the Lake Mills sale advertisement of this issue. While looking up these heifers also notice cut 18, which gives a fairly good idea of the 24-pound bull calf Mr. Gurr is consigning. This calf is sired by Uneeda Korndyke Abigail Boy, a 33-pound bull that is a handsome individual and out of the best daughter of Johanna McKinley Segis. John Jones, Milton Junction, Wis., will have in his consignment some choice heifers sired by Juliana King of Rock and Juliana King Repeater, previously described in the noted concerning Mr. Hetts' consignment. Cuts 14 and 15 in the Lake Mills sale advertisement of this week will give an idea of the quality of the animals consigned by Mr. Jones. These heifers are out of good A. R. O. dams, having records up to 26 pounds. Individuality is a point Holstein breeders are paying more and more attention to each yar and it will, therefore, pay discriminating buyers to pay particular attention to Mr. Jones' consignment, as they are exceptional in the point of individuality. Henry Anthes, Geo. Stroebel and Henry Schimming, of Jefferson, Wis., have in their consignments at least seven choice daughters of Uneeda Korndyke Abigail Boy, the 33-pound bull previously described as a splendid individual and from the best daughter of Johanna McKinley Segis. This 33-pound bull is now owned by Henry Anthes and is throwing exceptionally high-class calves. Cuts 10 and 11 in the Lake Mills sale advertisement of this issue will show the quality of his get. A number of these heifers are bred to a 34½-pound bull and are, therefore, worthy of careful inspection. Tulloch & Fries, Genoa, Wis., have listed in their consignment a 31-pound bull out of a cow that made her record as a four year old, as well as a yearling bull, whose nine nearest dams average 30 pounds. This firm have the reputation of bringing good things to a sale, and their consignment should be carefully noted. Wm. Trachte, Watertown, Wis., is consigning three cows, nine heifers and two bulls. The heifers are by Duke Johanna Inka (59269) a 31-pound bull and for the most part are bred to Mr. Trachte's 30-pound bull, Longfield Paul Fobes Homestead (187899).—Adv.

Meeting the Beef Shortage.

IF farmers, cattle raisers and dairymen generally will use registered Short-horn bulls, they will increase their beef output and aid in the present crisis in providing an adequate beef supply. There will be no need of "meatless days" if pure-bred registered Short-horn sires will be put to use throughout the land. The Short-horn has been called the "ever efficient missionary of the bovine heathen of the earth." Short-horn blood has been the great improver in the cattle stocks of America for more than 100 years and continues to bear a large share of that responsibility. A Nebraska farmer who uses registered Short-horn sires recently sold his steers at the Omaha market for $196.04 per head, selling 30 cents above the record of the market during its entire history. A carload of Short-horn steers were the highest dressers at the last International Show. They were by registered sires and out of high-grade, good-milking cows. The champion carload of steers at the recent live stock show in Utah were Short-horns.—Adv.

Pig Crop Not as Good as in Previous Years.

A SHORT time ago we sent out 50 letters to breeders of registered hogs in Wisconsin and Minnesota and up to date—April 14th—we have had replies from 14 breeders. One of the questions we asked was whether their pigs were as good as in previous years. In most instances we were advised that the pigs saved would compare with other years, but owing to the damp, cold, gloomy weather in March it was difficult to save as many as they should. Only two of the breeders complain about "canker mouth." Several have had a heavy loss from the scours, due to the fact that the early pigs could not get out and exercise on account of the weather. Several advise that they have had the entire litter come without any hair and we have had different reasons given for this. Another question we asked was whether the old sows or the gilts saved the most pigs and strange to say, those that replied to this question had the best success with the gilts. Under ordinary conditions it is generally conceded that the old sow will save more pigs than a gilt. In the 14 herds, 185 sows have farrowed 1,614 pigs, an average of 8.7 pigs to the litter. Of this number 1,121 pigs were saved or an average of 6.05 pigs per litter. These pigs wre sired by 77 different boars. The three leading breeds are represented in this report, Poland Chinas, Duroc Jerseys and Chester-Whites. The highest average was 8.2 pigs—20 sows with 164 pigs. The lowest was 4.12, but this breeder had seven sows to farrow from the 10th to the 20th of this month, which should bring his average up. We expect to hear from other breeders soon and will give another summary in a near future issue.—Adv.

Sale at Marshfield May 10th.

THE Central Wisconsin Breeders' Association sale will be held at Marshfield, Wis., Thursday, May 10th. At this writing 75 head of Holsteins and Guernseys have been listed for this sale. Of this number 50 will be Holstein bulls and females and 25 Guernseys. These have been selected from the various herds in central Wisconsin and are good representatives of the two breeds. The sale is under the management of W. W. Clark, Grand Rapids, and you can rest assured that he will do his part toward getting together a good lot of useful cattle. For detailed information get one of the catalogs and same can be had by addressing Mr. Clark at the above address. Kindly mention The Wisconsin Farmer when writing.—Adv.

Olson at Strum.

O. C. OLSON, Strum, Wis., is the owner of a good herd of Poland Chinas and he also breeds Short-horns. Just now he is busy taking care of a fine bunch of spring porkers. In Short-horns he has a few young bulls for sale of the dual-purpose kind, rich in Clay breeding. Write him for description and price.—Adv.

Bates Short-horns.

GEO. WENHAM & SONS, Ft. Atkinson, Wis., have a Short-horn herd strong in Bates breeding. They have for sale young bulls out of good milking dams and sired by bulls of Wildeyes and Buttercup breeding. Write them if interested in milking Short-horn bulls. Mention this paper.—Adv.

Schoenfeld Short-horns and Polands.

C. J. SCHOENFELD & SONS, Fox Lake, Wis., are breeders of Short-horn cattle and Poland China hogs and if you are interested in bulls of this breed or in a good, big-type Poland China boar, let them know about it and they'll send you detailed description. This is a firm that we are glad to recommend.—Adv.

Wyatt Jerseys.

YOU will have a large number of Jerseys to select from if you visit E. E. Wyatt, Tomah, Wis. He will sell cows and heifers and can supply you with one or a carload. Write him at once and mention this paper.—Adv.

Maurer Short-horns.

SHORT-HORNS and the name, Maurer, are synonymous. Richard Maurer & Son, Fox Lake, Wis., need no introduction to men interested in cattle of this breed. They have some of the best Scotch breeding and if you are in need of a good bull or a few heifers, let the above firm make you quotatoes.—Adv.

Why You Should Buy Your Boar Now.

WE never could understand why more of the better farmers, as well as breeders put off buying their boars until late in the season. There are several advantages in buying early. If you buy your boar at three or four months old you generally have a larger number to select from, for the best ones are not sold. Then the farmer or small breeder can generally take better care of one boar pig than the breeder will with a large bunch, besides you can grow and feed him out as you think best. By the time the breeding season opens the boar is accustomed to his surroundings and you will have better success with him. He costs less at three or four months than he does at six or seven and the express rate is very low. Write some of the swine advertisers in The Wisconsin Farmer for prices on their pigs at weaning time. Order one now and take good care of him and you will be glad of your deal.—Adv.

War Durocs.

WITH the important countries of the world now at war, can you see any reason why the price of pork will not remain high? In view of the fact it behooves you to breed as many sows as you can for fall farrow. If you are going to need a boar we wish to call your attention to about a dozen that Dennis Shea, Melvina, Wis., has for sale. They are big-boned rugged fellows that will please you, at least they are good enough to ship on approval. They are well bred and out of those big sows for which his herd is noted. Write him and mention The Wisconsin Farmer.—Adv.

Guernseys to Indiana.

CHAS. A. WILKINSON, who has one of the best Guernsey herds in the state of Wisconsin reports the sale of a choice bull to S. S. Wenger, Wakarusa, Ind. He is sired by his good herd bull, Langwater Frenchman 19226, and out of Lily's Golden Fawn, 434 pounds fat. Mr. Wilkins has 30 cows with records completed to date that average 460 pounds fat. Twenty of them average 505 pounds, and ten have an average of 553 pounds fat. Wilkins has the goods, and if you want Guernsey bulls send for his sale list and please mention The Wisconsin Farmer.—Adv.

Young Offers Boar Pigs.

WE have just had a letter from P. W. Young, Prosper, Minn., advising that he is booking orders for spring boars to be shipped at weaning time, the last of May and first of June. He reports—April 1st—140 spring pigs by his three boars, Master's Giant, Orange Wonder and Young's Big Joe. If you want a good, big-type Poland China boar pig, get your order in early.—Adv.

JOHANNA KORNDYKE BUTTER GIRL (157802) consigned by F. J. Bristol, Oakfield, Wis., to the Fond du Lac Holstein sale on April 26th and 27th, was recently advertised as a good prospect for 35 pounds. She has just completed a record of practically 32 pounds. Her complete record is as follows: 20.04 pounds, junior two year old, 26.57 pounds at three years, and present record of practically 32 pounds. It will be remembered that she is the dam of Adventure Lad, that was sired by Spring Farm Pontiac 6th. Adventure Lad is bred to most of the 35 females consigned by Mr. Bristol.—Adv.
